| ø 12 | 1/2 | AS42□1F-04-12A | 56 g |

| Tub | ing O.D. | Thread | Part no. | Weight |
|-----|-------------|--------|---------------|-------------|
| | ø 6 | 1/4 | AS22□1F-02-06 | 32 g |
| | ø 12 | 1/2 | AS42□1F-04-12 | 101 g |

Face seal adopted for threading

■ Improved installability (Reduced tool-tightening after hand-tightening)

■ Face seal

At hand-tightening After tool-tightening

Number of rotations after hand-tightening 1/6 of a rotation or less

■ Sealant

At hand-tightening

After tool-tightening

Number of rotations after hand-tightening 2 to 3 rotations

Prevention of sealant residue/protrusion

Current sealant type leaves residue and protrudes out from the threading when installing, making it necessary to clear away the residue using an air blower or similar. However, no residue is created when using a face seal. Re-piping is possible.

Face seal

Repeated re-piping some 6 to 10 times is possible due to use of elastic sealant on seating.

Sealant

Sealant tape is necessary because sealant becomes separated with repeated installation.

Uniform height

Uneven heights due to thread and needle variations

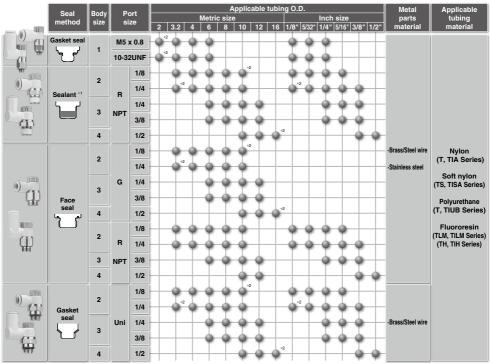

775

Series Variations

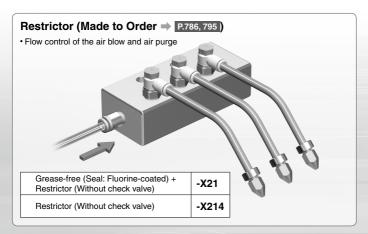

© Electroless nickel plating type is standardized.

Stainless steel type is standardized.

G thread (Face seal) is standardized.

*1 "Without sealant" type can be selected as a standard option. *2 Universal type is not available

AS Series **Made to Order**

Please contact SMC for detailed dimensions, specifications and lead times.

1 Lubricant: Vaseline

-X12

Example) AS2201F-01-04SA-X12

2 Grease-free (Seal: Fluorine-coated) + Restrictor (Without check valve)

-X21

Example) AS2201F-01-04SA-X21

Note 1) Not particle-free

Note 2) This product is a restrictor without a check valve (no control direction). Be aware that all part numbers are for a meter-out type; there is no part number for a meter-in type. Note 3) Only the needle and O-ring are fluorine-coated.

3 Restrictor (Without check valve)

Example) AS2201F-01-04SA-X214

Note) This product is a restrictor without a check valve (no control direction). Be aware that all part numbers are for a meter-out type; there is no part number for a meter-in type.

4 Clean Series

10-

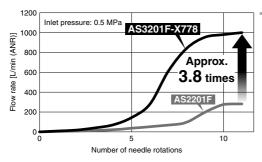

Note 2) The cleanliness class (ISO class) is 5. Note 3) Excluding G thread type.

5 Large Flow Type

-X778

■ Max. flow rate: 1000*1 L/min (ANR)

⚠ Warning

- Use within the specified cylinder speed and kinetic energy ranges. Otherwise, cylinder and seal damage may occur.
- 2. If the driven object moves at high speeds or is heavy, it will be unfeasible for only the cylinder's cushion to absorb the shock. Therefore, provide a speed-reduction circuit to reduce the cylinder's speed before the thrust is applied to the cushion or an external shock absorber to dampen the shock.

794

AS Series Made to Order

Please contact SMC for detailed dimensions, specifications and lead times.

1 Lubricant: Vaseline

Example) AS2201F-G01-04A-X12

2 Grease-free (Seal: Fluorine-coated) + Restrictor (Without check valve)

-X21

Example) AS2201F-G01-04A-X21

Note 1) Not particle-free

Note 2) This product is a restrictor without a check valve (no control direction). Be aware that all part numbers are for a meter-out type; there is no part number for a meter-in type. Note 3) Only the needle and O-ring are fluorine-coated.

3 Restrictor (Without check valve)

-X214

Example) AS2201F-G01-04A-X214

Note) This product is a restrictor without a check valve (no control direction). Be aware that all part numbers are for a meter-out type; there is no part number for a meter-in type.

4 Clean Series

10-

Example) 10-AS2201F-G01-04A

Note 1) Fluorine grease is used. Note 2) The cleanliness class (ISO class) is 5. Note 3) Applicable only to G thread type.

Prior to Use

Female Thread Conditions Applicable to Face Seal

- 1. Surface roughness of bearing surface: Rz 25 or less
- 2. Chamfer dimension: øD1, Seal bearing surface diameter: øD2 (Refer to the table below.)
- 3. Female thread inclination angle: 1° or less
- 4. Counterbore diameter when the female thread is counterbored.: ØD3
 - · Models with width across flats: Body width across flats x 1.1 or more
 - · Models other than hexagon (Hexagon socket head male connector etc.): Body dimensions + 0.2 mm or more
 - * The width across flats and the body dimensions differ depending on the model even when the same thread size is used.
 - Refer to the dimensions in the catalog.
- 5. If oil content or sealant is sticking to the female thread, this may cause damage of the product. Remove it before piping.

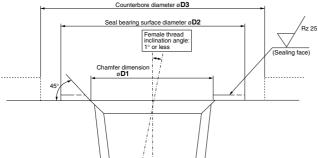

Table 1

| Connection thread size | Chamfer dimension ø D1 mm | Seal bearing surface diameter øD2 mm |
|------------------------|-------------------------------------|---|
| R1/8 | 10.2 to 10.4 | 12 or more |
| R1/4 | 13.6 to 13.8 | 17 or more |
| R3/8 | 17.1 to 17.3 | 21 or more |
| R1/2 | 21.4 to 21.6 | 27 or more |
| NPT1/16 | 8.2 to 8.4 | 11.11 or more |
| NPT1/8 | 10.5 to 10.7 | 12.7 or more |
| NPT1/4 | 14.1 to 14.3 | 17.46 or more |
| NPT3/8 | 17.4 to 17.6 | 22 or more |
| NPT1/2 | 21.7 to 21.9 | 28.7 or more |
| G1/8 | 10.2 to 10.6 | 12 or more |
| G1/4 | 13.6 to 14.0 | 17 or more |
| G3/8 | 17.1 to 17.5 | 21 or more |
| G1/2 | 21.4 to 21.8 | 27 or more |

⚠ Precautions

For products that do not satisfy the female thread conditions shown above and the piping with a piping pitch narrower than the product dimension, use the current sealant type.

- * The rubber parts of the face seal cannot be replaced.
- * The rubber parts of the face seal may fall off by the air blow and they cannot be mounted again. Be careful not to perform the air blow.

AS Series Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to page 11 for safety instructions and pages 19 to 22 for flow control equipment precautions.

Design and Selection

⚠ Warning

1. Check the specifications.

The products in this catalog are designed to be used in compressed air systems (including vacuum) only.

If the products are used in an environment where pressure or temperature is out of the specified range, damage and/or malfunction may result. Do not use under such conditions. (Refer to the specifications.)

Please contact SMC when using a fluid other than compressed air (including vacuum).

We do not guarantee against any damage if the product is used outside of the specification range.

2. The products in this catalog are not designed for the use as stop valve with zero air leakage.

A certain amount of leakage is allowed in the product's specifications.

Tightening the needle to reduce leakage to zero may result in equipment damage.

Do not disassemble the product or make any modifications, including additional machining.

It may cause human injury and/or an accident.

The flow rate characteristics for each product are representative values.

The flow rate characteristics are characteristics of each individual product. Actual values may differ depending on the piping, circuitry, pressure conditions, etc.

Sonic conductance (C) and critical pressure ratio (b) values for products are representative values.

The speed controller's controlled flow values are with the needle fully open and free flow with the needle fully closed.

6. Check if PTFE can be used in application.

PTFE powder (Polytetrafluoroethylene resin) is included in the seal material for piping taper thread of male thread type. Confirm that the use of it will not cause any adverse effect on the system.

Please contact SMC if the Safety Data Sheet (SDS) is required.

Speed controller is designed to control the speed of the actuator.

When it is used for adjusting the flow rate of the air blow, use a restrictor without check valve function (X214 or X21).

Mounting

⚠ Warning

1. Operation Manual

Install the products and operate them only after reading the Operation Manual carefully and understanding its contents. Also, keep the manual where it can be referred to as necessary.

2. Ensure sufficient space for maintenance activities.

When installing the products, allow access for maintenance.

Mounting

⚠ Warning

3. Tighten threads with the proper tightening torque.

When installing the products, follow the listed proper torque.

After pushing the knob down to lock, confirm that it is locked.

It should not be possible to rotate the knob to the right or to the left. If the knob is pulled with force, it may break. Do not pull the knob with excessive force.

5. Check the degree of rotation of the needle valve.

The products in this catalog are retainer type so that the needle is not removed completely. Over rotation will cause damage.

6. Do not use tools such as pliers to rotate the knob.

It can cause idle rotation of the knob or damage.

7. Verify the air flow direction.

Mounting backward is dangerous, because the speed adjustment needle will not work and the actuator may lurch suddenly.

Adjust the speed by opening the needle slowly from the fully closed state.

Loose needle valves may cause unexpected sudden actuator

When a needle valve is turned clockwise, it is closed and actuator speed decreases. When a needle valve is turned counterclockwise, it is open and actuator speed increases.

Do not apply excessive force or shock to the body or fittings with an impact tool.

It can cause damage or air leakage.

 For handling One-touch fittings, refer to the Fittings and Tubing Precautions on pages 14 to 18.

11. Tubing O.D. Ø2

Tubing other than that from SMC cannot be used, because it may result in inability to connect the tube, air leakage after connecting the tube or disconnection of the tube.

 To install/remove the product, use an appropriate wrench to tighten/loosen at the supplied nut on body B.

Do not apply torque at other points as the product may be damaged. Rotate body A manually for positioning after installation.

AS Series Specific Product Precautions 2

Be sure to read this before handling the products.

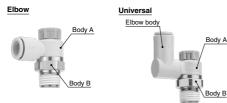

Refer to page 11 for safety instructions and pages 19 to 22 for flow control equipment precautions.

Mounting

⚠ Warning

 Do not use body A and/or elbow body for applications involving continuous rotation.

Body A and the fitting section may be damaged.

⚠ Caution

For M5, 10-32UNF

Tightening method

First, tighten it by hand, then give it an additional 1/6 turn to 1/4 turn with a wrench. A reference value for the tightening torque is 1 to 1.5 N·m.

Note) Excessive tightening may damage the thread portion or deform the gasket and cause air leakage.

If the screw is too shallowly screwed in, it may come loose or air may leak.

Chamfered area for female thread

 Conforming to ISO 16030 (air pressure fluid dynamics – connection – ports and stud ends), the chamfered dimensions shown in the table below are recommended.

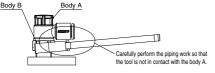

| Female thread size | Chamfered dimension ø D (Recommended value) |
|--------------------|---|
| M5 | 5.1 to 5.4 |
| 10-32UNF | 5.0 to 5.3 |
| | • |

This product has a stopper for fully close in rotating direction. Excess torque may break the stopper. Table below shows the maximum allowable torque of the knob.

| Body size | Maximum allowable torque [N·m] |
|-----------|--------------------------------|
| M5 | 0.05 |
| 1/8 | 0.07 |
| 1/4 | 0.16 |
| 3/8 | 0.2 |
| 1/2 | 0.4 |

3. When performing the piping work, turn the tightening tool in the horizontal direction to the hexagon across flats of the body B so that any moment is not applied to the body A. If the tool is in contact with the body A, this may cause the body B to come off.

↑ Caution

For R, NPT Thread (With sealant)

Tightening method

 The proper tightening torques of the fittings are as shown in the table below. As a guide, tighten by hand, then turn it two or three turns with a wrench. Check the dimensions of each product for the hexagon width across flats.

| Connection thread size | Proper tightening torque [N·m] |
|------------------------|--------------------------------|
| NPT, R1/8 | 3 to 5 |
| NPT, R1/4 | 8 to 12 |
| NPT, R3/8 | 15 to 20 |
| NPT, R1/2 | 20 to 25 |

Chamfered area for female thread

By chamfering as shown in the table below, machining of threads is easier and effective for burr prevention.

| Connection | Chamfered dimension øD (Recommended value) | |
|-------------|--|--------------|
| thread size | Rc | NPT, NPTF |
| 1/8 | 10.2 to 10.4 | 10.5 to 10.7 |
| 1/4 | 13.6 to 13.8 | 14.1 to 14.3 |
| 3/8 | 17.1 to 17.3 | 17.4 to 17.6 |
| 1/2 | 21.4 to 21.6 | 21.7 to 21.9 |
| | | |

^{*} For Uni thread, Rz 12.5 is necessary for sealing at the chamfered part

For R, NPT, G Thread (Face seal type)

Tightening method

First, tighten the threaded portion by hand, then use a proper wrench, which could be suitable for the width across flats of the hexagon body, to tighten it further at a wrench tightening angle shown in the table below. For a tightening torque guide, refer to the table below. Check the dimensions of each product for the hexagon width across flats.

 Tighten fittings with face seal using the proper tightening torques in the table below.

| Connection thread size (R, NPT, G) | Proper tightening torque [N-m] | |
|---------------------------------------|--------------------------------|--|
| 1/16, 1/8 | 3 to 5 | |
| 1/4 | 8 to 12 | |
| 3/8 | 15 to 20 | |
| 1/2 | 20 to 25 | |

- Insufficient tightening may cause seal failure, or loosen the threads
- 3. Reuse
 - 1) Normally, fittings with face seal can be reused 6 to 10 times
 - 2) The seal ring cannot be replaced.

AS Series Specific Product Precautions 3

Be sure to read this before handling the products.

Refer to page 11 for safety instructions and pages 19 to 22 for flow control equipment precautions.

Mounting

⚠ Caution

For R, NPT, G Thread (Face seal type)

Chamfered area for female thread (Recommended value)

 Conforming to ISO 16030-2001, the chamfered dimensions shown in the table below are recommended. By chamfering as shown in the table below, machining of threads is easier and effective for burr prevention.

| Nominal | Chamfered dimension øD | |
|-------------|------------------------|------|
| thread size | Min. | Max. |
| 1/8 | 9.8 | 10.2 |
| 1/4 | 13.3 | 13.7 |
| 3/8 | 16.8 | 17.2 |
| 1/2 | 21.0 | 21.4 |

2. Use G external threads with G internal threads.

How to distinguish between G, R and NPT threads

For Uni Thread

Tightening method

 First, tighten the threaded portion by hand, then use a proper wrench, which could be suitable for the width across flats of the hexagon body, to tighten it further at a wrench tightening angle shown in the table below. For a tightening torque guide, refer to the table below.

Connection Female Thread: Rc, NPT, NPTF

| | ••••••• | ., | |
|-----------------|---------|---|-------------------------|
| Uni thread size | | Wrench tightening angle after hand-tightening [deg] | Tightening torque [N·m] |
| | 1/8 | 30 to 60 | 3 to 5 |
| | 1/4 | 30 to 60 | 8 to 12 |
| | 3/8 | 15 to 45 | 14 to 16 |
| | 1/2 | 15 to 30 | 20 to 22 |

Connection Female Thread: G

| Uni thread size | Wrench tightening angle after hand-tightening [deg] | Tightening torque [N·m] |
|-----------------|---|-------------------------|
| 1/8 | 30 to 45 | 3 to 4 |
| 1/4 | 15 to 30 | 4 to 5 |
| 3/8 | 15 to 30 | 8 to 9 |
| 1/2 | 15 to 30 | 14 to 15 |

2. The gasket can be reused up to 6 to 10 times.

Chamfered area for female thread

By chamfering as shown in the table below, machining of threads is easier and effective for burr prevention.

| | Chamfered dimension øD (Recommended val | | | |
|--|---|--------------|--------------|--|
| thread size | G | Rc | NPT, NPTF | |
| 1/8 | 10.2 to 10.6 | 10.2 to 10.4 | 10.5 to 10.7 | |
| 1/4 | 13.6 to 14.0 | 13.6 to 13.8 | 14.1 to 14.3 | |
| 3/8 | 17.1 to 17.5 | 17.1 to 17.3 | 17.4 to 17.6 | |
| 1/2 | 21.4 to 21.8 | 21.4 to 21.6 | 21.7 to 21.9 | |
| * For Unithroad Bz 12 5 is necessary for | | | | |

* For Uni thread, Rz 12.5 is necessary for sealing at the chamfered part.

Piping Threads with Sealant

∧ Caution

- If the fitting is tightened with excessive torque, a large amount of sealant will seep out. Remove the excess sealant.
- Insufficient tightening may loosen the threads, or cause air leakage.
- 3. Reuse
 - 1) Normally, fittings with sealant can be reused 2 to 3 times.
 - To prevent air leakage through the sealant, remove any loose sealant stuck to the fitting by blowing air over the threaded portion.
 - 3) If the sealant no longer provides effective sealing, wrap sealing tape over the sealant before reusing. Do not use the sealant in any form other than a tape type.
- Once the fitting has been tightened, backing it out to its original position often causes the sealant to become defective. Air leakage will occur.
- Use R external threads with Rc internal threads and NPT external threads with NPT internal threads.

Piping

1. For handling One-touch fittings, refer to the Fittings and Tubing Precautions on pages 14 to 18.

2. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

3. Winding of sealant tape

When screwing together pipes and fittings, etc., be certain that chips from the pipe threads and sealing material do not get inside the pipe. Also, when the sealant tape is used, leave approx. 1 thread ridges exposed at the end of the threads.
