

# Electric Actuator

## LEF Series

Slider Type

Step Motor (Servo/24 VDC) Servo Motor (24 VDC)

### Ball Screw Drive LEFS Series

Size: 16, 25, 32, 40 ▶ p. 31

Max. work load: **65 kg** Max. speed: **1200 mm/s**  
 Positioning repeatability:  $\pm 0.015$  mm (High-precision type)  
 Clean room specification also available

### Belt Drive LEFB Series

Size: 16, 25, 32 ▶ p. 31

Max. stroke: **2000 mm**  
 Max. speed: **2000 mm/s**

AC Servo Motor

### Ball Screw Drive LEFS Series

Size: 25, 32, 40 ▶ p. 39, 47

Positioning repeatability:  $\pm 0.01$  mm (High-precision type)  
 Improved high-speed transfer ability Max. speed: **1500 mm/s**  
 High acceleration/deceleration: **20000 mm/s<sup>2</sup>**  
 Pulse input type  
 With internal absolute encoder (For the LECSB/C/S)  
 Clean room specification also available

### Belt Drive LEFB Series

Size: 25, 32, 40 ▶ p. 49

Max. speed: **2000 mm/s**  
 Max. stroke: **3000 mm**  
 Max. acceleration/deceleration: **20000 mm/s<sup>2</sup>**  
 Motor bottom mounting type also available

#### Step Motor (Servo/24 VDC) Controllers/Drivers

Servo Motor (24 VDC) ▶ p. 684

- ▶ Step data input type  
**JXC51/61/LECA6 Series** (64 positioning points)
- ▶ EtherCAT®/EtherNet/IP™/PROFINET/  
 DeviceNet™/IO-Link/CC-Link direct input type  
**JXCE1/91/P1/D1/L1/M1 Series**
- ▶ Programless type  
**LECP1 Series** (14 positioning points)
- ▶ Pulse input type  
**LECPA Series**

The LECSB-S, LECS-C-S, and LECS-S-S electric actuator drivers are to be discontinued. Please select one of the substitute drivers ending with a "-T" instead: the LECSB-T, LECS-C-T, and LECS-S-T.

#### AC Servo Motor Drivers ▶ p. 764

##### ▶ For absolute encoders

- Pulse input type  
**LECSB(-T) Series**
- CC-Link direct input type  
**LECS-C(-T) Series**
- SSCNET III type  
**LECSS Series**
- SSCNET III/H type  
**LECSS-T Series**
- Network card type  
**LECSN-T Series**
- MECHATROLINK type  
**LECY□ Series**

##### ▶ For incremental encoders

- Pulse input type/  
 Positioning type  
**LECSA Series**

## Slider Type *LEF Series*

- Easy mounting of the body/Reduction in installation labor

It is possible to mount the main body without removing the external cover, etc.

- The auto switch can be used to detect the position of the table.

- Up to 2 auto switches can be mounted on each side of the body.

### Step Motor (Servo/24 VDC)

### Servo Motor (24 VDC)

## Ball Screw Drive/*LEFS Series* Size: 16, 25, 32, 40

Model	Lead [mm]			Max. speed [mm/s]*1
				Step motor (Servo/24 VDC)
LEFS16	—	10	5	700 (For 10 mm lead)
LEFS25	20	12	6	1100 (For 20 mm lead)
LEFS32	24	16	8	1200 (For 24 mm lead)
LEFS40	30	20	10	1200 (For 30 mm lead)

\*1 Excludes the LECPA

Max. work load: **65 kg**

Positioning repeatability: **±0.02 mm**  
(±0.015 mm for the LEFSH)

#### Slider type with lower height

Size	Height [mm]
16	40
25	48
32	60
40	68

#### Motor parallel type available!

○ Motor mounting position can be selected from two directions (Right or Left).

○ The top surface of the table and motor are level.

#### Non-magnetizing lock mechanism (Option)

For drop prevention in the case of a power failure (Maintained)\*1

\*1 The LEFB belt drive actuator cannot be used for vertical applications.

### Compatible motors

- Step motor (Servo/24 VDC)  
Ideal for the low-speed transfer of heavy loads
- Servo motor (24 VDC)  
Stable at high speeds  
Silent operation

## Belt Drive/*LEFB Series* Size: 16, 25, 32

Max. stroke: **2000 mm**

Max. speed: **2000 mm/s**

#### Slider type with lower height

**AC Servo Motor**

**Ball Screw Drive/LEFS Series Size: 25, 32, 40**

Model	Lead [mm]			Max. speed [mm/s]
				AC servo motor
LEFS25	20	12	6	1500
LEFS32	24	16	8	1500
LEFS40	30	20	10	1500

- High-output motor (100/200/400 W)
- Improved high-speed transfer ability
- High acceleration/deceleration compatible: 20000 mm/s<sup>2</sup>
- Pulse input type
- With internal absolute encoder (For the LECSB/C/S and LECY)

**Motor parallel type available!**

⊙ Motor mounting position can be selected from two directions (Right or Left).

**Belt Drive/LEFB Series Size: 25, 32, 40**

- Max. speed: **2000** mm/s
- Max. stroke: **3000** mm
- Max. acceleration/deceleration: **20000** mm/s<sup>2</sup>

**Clean Room Specification**

**Ball Screw Drive/11-LEFS Series**

**ISO Class 4<sup>\*1</sup> (ISO 14644-1)**

- Built-in vacuum piping
- It is possible to mount the main body without removing the external cover, etc.
- Body-integrated linear guide specification

\*1 Changes depending on the suction flow rate  
Refer to pages 633 and 634 for details.

Vacuum suction minimizes external particle generation from the ball screw and guide.

**Support Guide/LEFG Series**

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

**Application example**

**Caution**

After installing the actuator on the drive side, align it with the support guide. If the mounting flatness exceeds 0.1, install a floating mechanism separately on the workpiece installation surface (table).

For details, refer to page 54.

# Model Selection

**LEFS Series ▶ p. 57** **LEFB Series ▶ p. 113** **11-LEFS Series ▶ p. 635**

**25A-LEFS Series ▶ p. 665**

## Selection Procedure

### Selection Example

#### Operating conditions

- Workpiece mass: 5 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s<sup>2</sup>]
- Stroke: 200 [mm]
- Mounting orientation: Horizontal upward
- Workpiece mounting condition:

<Speed-Work load graph> (LEFS25/Step motor)

#### Step 1 Check the work load-speed. <Speed-Work load graph> (Pages 32 to 35)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.  
 Selection example) The **LEFS25A-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

#### Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

##### Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in position of the step data. Therefore, calculate the settling time while referencing to the following value.

$$T4 = 0.2 \text{ [s]}$$

Calculation example)

T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.2 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.2 = 0.97 \text{ [s]}$$

L : Stroke [mm] ... (Operating condition)  
 V : Speed [mm/s] ... (Operating condition)  
 a1: Acceleration [mm/s<sup>2</sup>] ... (Operating condition)  
 a2: Deceleration [mm/s<sup>2</sup>] ... (Operating condition)

- T1: Acceleration time [s]  
Time until reaching the set speed
- T2: Constant speed time [s]  
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]  
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]  
Time until positioning is completed

#### Step 3 Check the allowable moment. <Static allowable moment> (page 35)

<Dynamic allowable moment> (page 36)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFS25A-200** should be selected.

\* If the step motor and servo motors do not meet your specifications, also consider the AC servo specification on page 39.

For the LECPA and JXC□<sub>3</sub>, refer to page 33.

## Dynamic Allowable Moment

Acceleration/Deceleration ——— 1000 mm/s<sup>2</sup>    - - - 3000 mm/s<sup>2</sup>

## Calculation of Guide Load Factor

1. Decide operating conditions.

Model: LEFS/LEFB

Size: 16/25/32/40

Mounting orientation: Horizontal/Bottom/Wall/Vertical

Acceleration [mm/s<sup>2</sup>]: a

Work load [kg]: m

Work load center position [mm]: Xc/Yc/Zc

2. Select the target graph while referencing the model, size, and mounting orientation.

3. Based on the acceleration and work load, find the overhang [mm]: Lx/Ly/Lz from the graph.

4. Calculate the load factor for each direction.

$$\alpha_x = X_c/L_x, \alpha_y = Y_c/L_y, \alpha_z = Z_c/L_z$$

5. Confirm the total of  $\alpha_x$ ,  $\alpha_y$ , and  $\alpha_z$  is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

### Mounting orientation

### Example

1. Operating conditions

Model: LEFS40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s<sup>2</sup>]: 3000

Work load [kg]: 20

Work load center position [mm]: Xc = 0, Yc = 50, Zc = 200

2. Select the graphs for horizontal of the LEF40 on page 36.

3. Lx = 400 mm, Ly = 250 mm, Lz = 1500 mm

4. The load factor for each direction can be found as follows.

$$\alpha_x = 0/400 = 0$$

$$\alpha_y = 50/250 = 0.2$$

$$\alpha_z = 200/1500 = 0.13$$

5.  $\alpha_x + \alpha_y + \alpha_z = 0.33 \leq 1$

## Table Accuracy (Reference Value)

Model	Traveling parallelism [mm] (Every 300 mm)	
	① C side traveling parallelism to A side	② D side traveling parallelism to B side
LEF16	0.05	0.03
LEF25	0.05	0.03
LEF32	0.05	0.03
LEF40	0.05	0.03

\* Traveling parallelism does not include the mounting surface accuracy. (Excludes when the stroke exceeds 2000 mm)

## Table Displacement (Reference Value)

\* This displacement is measured when a 15 mm aluminum plate is mounted and fixed on the table.  
 \* Check the clearance and play of the guide separately.

## Overhang Displacement Due to Table Clearance (Initial Reference Value)

### High-precision type

# Model Selection

LEFS Series ▶ p. 78

LECY□ Series ▶ p. 94

11-LEFS Series ▶ p. 644

25A-LEFS Series ▶ p. 668

## Selection Procedure

## Selection Example

### Operating conditions

- Workpiece mass: 45 [kg]
  - Speed: 300 [mm/s]
  - Acceleration/Deceleration: 3000 [mm/s<sup>2</sup>]
  - Stroke: 200 [mm]
  - Mounting position: Horizontal upward
- Workpiece mounting condition:
- 

### Step 1 Check the work load-speed. <Speed-Work load graph> (Page 40)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.  
Selection example) The **LEFS40S4B-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

### Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

#### Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the motor type and load. The value below is recommended.

$$T4 = 0.05 \text{ [s]}$$

Calculation example)

T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.05 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.05 = 0.82 \text{ [s]}$$

- L : Stroke [mm] ... (Operating condition)
- V : Speed [mm/s] ... (Operating condition)
- a1 : Acceleration [mm/s<sup>2</sup>] ... (Operating condition)
- a2 : Deceleration [mm/s<sup>2</sup>] ... (Operating condition)

- T1: Acceleration time [s]  
Time until reaching the set speed
- T2: Constant speed time [s]  
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]  
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]  
Time until positioning is completed

### Step 3 Check the allowable moment. <Static allowable moment> (page 35) <Dynamic allowable moment> (page 44)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFS40S4B-200** should be selected.

## Speed-Work Load Graph/Required Conditions for “Regeneration Option”(Guide)

\* The allowable speed is restricted depending on the stroke.  
Select it by referring to the “Allowable Stroke Speed” below.

### LEFS25/Ball Screw Drive

## Dynamic Allowable Moment

Acceleration/Deceleration ——— 1000 mm/s<sup>2</sup>    - - - 3000 mm/s<sup>2</sup>    ······ 5000 mm/s<sup>2</sup>    - - - - 10000 mm/s<sup>2</sup>    - - - - 20000 mm/s<sup>2</sup>

## Calculation of Guide Load Factor

- Decide operating conditions.

Model: LEFS

Size: 25/32/40

Mounting orientation: Horizontal/Bottom/Wall/Vertical

Acceleration [mm/s<sup>2</sup>]: a

Work load [kg]: m

Work load center position [mm]: Xc/Yc/Zc

- Select the target graph while referencing the model, size, and mounting orientation.

- Based on the acceleration and work load, find the overhang [mm]: Lx/Ly/Lz from the graph.

- Calculate the load factor for each direction.

$$\alpha_x = X_c/L_x, \alpha_y = Y_c/L_y, \alpha_z = Z_c/L_z$$

- Confirm the total of  $\alpha_x$ ,  $\alpha_y$ , and  $\alpha_z$  is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

### Mounting orientation

### Example

- Operating conditions

Model: LEFS40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s<sup>2</sup>]: 3000

Work load [kg]: 20

Work load center position [mm]: Xc = 0, Yc = 50, Zc = 200

- Select the graphs for horizontal of the LEFS40 on page 44.

- Lx = 250 mm, Ly = 180 mm, Lz = 1000 mm

- The load factor for each direction can be found as follows.

$$\alpha_x = 0/250 = 0$$

$$\alpha_y = 50/180 = 0.27$$

$$\alpha_z = 200/1000 = 0.2$$

- $\alpha_x + \alpha_y + \alpha_z = 0.47 \leq 1$

### Table Accuracy (Reference Value)

Model	Traveling parallelism [mm] (Every 300 mm)	
	① C side traveling parallelism to A side	② D side traveling parallelism to B side
LEFS25	0.05	0.03
LEFS32	0.05	0.03
LEFS40	0.05	0.03

\* Traveling parallelism does not include the mounting surface accuracy.

### Table Displacement (Reference Value)

\* This displacement is measured when a 15 mm aluminum plate is mounted and fixed on the table.  
 \* Check the clearance and play of the guide separately.

### Overhang Displacement Due to Table Clearance (Initial Reference Value)

# Model Selection

LECS □ Series ▶ p. 78

LEFS Series ▶ p. 94

11-LEFS Series ▶ p. 646

25A-LEFS Series ▶ p. 669

## Selection Procedure

\* The Work Load-Acceleration/Deceleration Graph, Dynamic Allowable Moment, Calculation of Guide Load Factor, and Table Accuracy/Displacement/Overhang Displacement are the same as those of the LECS □ AC servo motor. For details, refer to page 41 and onwards.

**Step 1** Check the work load-speed.

**Step 2** Check the cycle time.

**Step 3** Check the allowable moment.

## Selection Example

### Operating conditions

- Workpiece mass: 45 [kg]
  - Speed: 300 [mm/s]
  - Acceleration/Deceleration: 3000 [mm/s<sup>2</sup>]
  - Stroke: 200 [mm]
  - Mounting position: Horizontal upward
- Workpiece mounting condition:
- 

**Step 1** Check the work load-speed. <Speed-Work load graph> (Page 48)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.  
Selection example) The **LEFS40V8B-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

**Step 2** Check the cycle time.

Calculate the **cycle time** using the following calculation method.

**Cycle time:**

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the motor type and load. The value below is recommended.

$$T4 = 0.05 \text{ [s]}$$

Calculation example)  
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.05 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.05 = 0.82 \text{ [s]}$$

L : Stroke [mm] ... (Operating condition)  
V : Speed [mm/s] ... (Operating condition)  
a1 : Acceleration [mm/s<sup>2</sup>] ... (Operating condition)  
a2 : Deceleration [mm/s<sup>2</sup>] ... (Operating condition)

- T1: Acceleration time [s]  
Time until reaching the set speed
- T2: Constant speed time [s]  
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]  
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]  
Time until positioning is completed

**Step 3** Check the allowable moment. <Static allowable moment> (page 35)  
<Dynamic allowable moment> (page 44)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFS40V8B-200** should be selected.

## Speed-Work Load Graph/Conditions for "Regenerative Resistor" (Guide)

\* The allowable speed is restricted depending on the stroke.  
Select it by referring to the "Allowable Stroke Speed" below.

### LEFS25/Ball Screw Drive

#### Horizontal

#### Vertical

### LEFS32/Ball Screw Drive

#### Horizontal

#### Vertical

### LEFS40/Ball Screw Drive

#### Horizontal

#### Vertical

#### "Regenerative resistor" area

\* When using the actuator in the "Regenerative resistor" area, download the "AC servo drive capacity selection program/SigmaJunmaSize+" from the SMC website. Then, calculate the necessary regenerative resistor capacity to prepare an appropriate external regenerative resistor.

\* Regenerative resistor should be provided by the customer.

<Speed-Work load graph>  
(LEFB40)

### Step 1 Check the work load-speed. <Speed-Work load graph> (Page 50)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.

Selection example) The **LEFB40S4S-2000** can be temporarily selected as a possible candidate based on the graph shown on the right side.

### Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

#### Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the motor type and load. The value below is recommended.

$$T4 = 0.05 \text{ [s]}$$

Calculation example)

T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 1500/3000 = 0.5 \text{ [s]}$$

$$T3 = V/a2 = 1500/3000 = 0.5 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{2000 - 0.5 \cdot 1500 \cdot (0.5 + 0.5)}{1500} = 0.83 \text{ [s]}$$

$$T4 = 0.05 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.5 + 0.83 + 0.5 + 0.05 = 1.88 \text{ [s]}$$

- L : Stroke [mm] ... (Operating condition)
- V : Speed [mm/s] ... (Operating condition)
- a1 : Acceleration [mm/s<sup>2</sup>] ... (Operating condition)
- a2 : Deceleration [mm/s<sup>2</sup>] ... (Operating condition)

- T1: Acceleration time [s]  
Time until reaching the set speed
- T2: Constant speed time [s]  
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]  
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]  
Time until positioning is completed

### Step 3 Check the allowable moment. <Static allowable moment> (page 35) <Dynamic allowable moment> (page 51)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFB40S4S-2000** should be selected.

## Speed-Work Load Graph/Required Conditions for "Regeneration Option"(Guide)

### LEFB□/ Belt Drive

\* The shaded area in the graph requires the regeneration option (LEC-MR-RB-032).

## Cycle Time Graph (Guide)

### LEFB□/ Belt Drive

#### LEFB25/32/40

\* Cycle time is for when maximum speed.

\* Maximum stroke: LEFB25: 2000 mm  
LEFB32: 2500 mm  
LEFB40: 3000 mm

### "Regenerative resistor" area

- \* When using the actuator in the "Regenerative resistor" area, download the "AC servo drive capacity selection program/SigmaJunmaSize+" from the SMC website. Then, calculate the necessary regenerative resistor capacity to prepare an appropriate external regenerative resistor.
- \* Regenerative resistor should be provided by the customer.

## Work Load-Acceleration/Deceleration Graph (Guide)

\* This graph shows the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to the "Calculation of Guide Load Factor" or the Electric Actuator Model Selection Software for confirmation: <https://www.smcworld.com>

## Dynamic Allowable Moment

Acceleration/Deceleration ——— 1000 mm/s<sup>2</sup>    - - - 3000 mm/s<sup>2</sup>    ····· 5000 mm/s<sup>2</sup>    - - - - 10000 mm/s<sup>2</sup>    - - - - 20000 mm/s<sup>2</sup>

Orientation		Model		
Load overhanging direction m : Work load [kg] Me: Allowable moment [N·m] L : Overhang to the work load center of gravity [mm]		LEFB25	LEFB32	LEFB40
Horizontal/Bottom	X 			
	Y 			
	Z 			
Wall	X 			
	Y 			
	Z 			

## Calculation of Guide Load Factor

- Decide operating conditions.

Model: LEFB

Size: 25/32/40

Mounting orientation: Horizontal/Bottom/Wall

Acceleration [mm/s<sup>2</sup>]: **a**

Work load [kg]: **m**

Work load center position [mm]: **Xc/Yc/Zc**

- Select the target graph while referencing the model, size, and mounting orientation.

- Based on the acceleration and work load, find the overhang [mm]: **Lx/Ly/Lz** from the graph.

- Calculate the load factor for each direction.

$$\alpha_x = Xc/Lx, \alpha_y = Yc/Ly, \alpha_z = Zc/Lz$$

- Confirm the total of  $\alpha_x$ ,  $\alpha_y$ , and  $\alpha_z$  is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

### Example

- Operating conditions

Model: LEFB40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s<sup>2</sup>]: 3000

Work load [kg]: 20

Work load center position [mm]: **Xc = 0, Yc = 50, Zc = 200**

- Select the graphs for horizontal of the LEFB40 on page 51.

- Lx = 250 mm, Ly = 180 mm, Lz = 1000 mm**

- The load factor for each direction can be found as follows.

$$\alpha_x = 0/250 = 0$$

$$\alpha_y = 50/180 = 0.27$$

$$\alpha_z = 200/1000 = 0.2$$

- $\alpha_x + \alpha_y + \alpha_z = 0.47 \leq 1$

- \*1 Please consult with SMC for non-standard strokes as they are produced as special orders.
- \*2 Excluding the LEF16
- \*3 If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 161.)
- \*4 Order auto switches separately. (For details, refer to pages 162 to 164.)
- \*5 When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.
- \*6 Refer to the body mounting example on page 166 for the mounting method.
- \*7 Produced upon receipt of order (Robotic cable only)
- \*8 The standard cable should only be used on fixed parts. For use on moving parts, select the robotic cable. Refer to pages 758 and 759 if only the actuator cable is required.

- \*9 For details on controllers/drivers and compatible motors, refer to the compatible controllers/drivers on the next page.
- \*10 Only available for the motor type "Step motor"
- \*11 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 736 separately.
- \*12 When "Without controllers/drivers" is selected for controller/driver types, I/O cable cannot be selected. Refer to page 713 (For LECA6), page 724 (For LECP1), or page 736 (For LECPA) if I/O cable is required.
- \*13 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector
- \*14 The DIN rail is not included. It must be ordered separately.
- \*15 Select "Nil" for anything other than DeviceNet™, CC-Link, or parallel input. Select "Nil," "S," or "T" for DeviceNet™ or CC-Link. Select "Nil," "1," "3," or "5" for parallel input.

## ⚠ Caution

### [CE-compliant products]

- ① EMC compliance was tested by combining the electric actuator LEF series and the controller LEC/JXC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.
- ② For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 713 for the noise filter set. Refer to the LECA series Operation Manual for installation.

### [UL-compliant products (For the LEC series)]

When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

## The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and actuator is correct.

### <Check the following before use.>

- ① Check the actuator label for the model number. This number should match that of the controller/driver.
- ② Check that the Parallel I/O configuration matches (NPN or PNP).

\* Refer to the Operation Manual for using the products. Please download it via our website: <https://www.smcworld.com>

\*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

\*2 Speed changes according to the controller/driver type and work load. Check the "Speed-Work Load Graph (Guide)" on pages 32 and 33. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m.

\*3 A reference value for correcting an error in reciprocal operation

\*4 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

\*5 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

\*6 Indicates the max. power during operation (including the controller)

This value can be used for the selection of the power supply.

\*7 With lock only

\*8 For an actuator with lock, add the power consumption for the lock.

**Dimensions: In-line Motor**

**LEFS16**

**Positioning pin hole\*5 (Option): Body bottom**

- \*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 2 mm or more because of round chamfering. (Recommended height 5 mm)  
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- \*2 This is the distance within which the table can move when it returns to origin.  
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
- \*3 Position after returning to origin
- \*4 [ ] for when the direction of return to origin has changed
- \*5 When using the body bottom positioning pin holes, do not simultaneously use the housing B bottom pin hole.

- \*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height 5 mm)  
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- \*2 This is the distance within which the table can move when it returns to origin.  
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
- \*3 Position after returning to origin
- \*4 [ ] for when the direction of return to origin has changed

# Electric Actuator/Slider Type Ball Screw Drive

The LECSB-S, LECS-S, and LECS-S electric actuator drivers are to be discontinued. The LECSB-T, LECS-T, and LECS-T drivers are available as substitutes. In the product number, select T6 instead of S6, T7 instead of S7, or T8 instead of S8 for the **Motor type**, and select B2 instead of B1, C2 instead of C1, or S2 instead of S1 for the **Driver type**.

## LEFS Series LEFS25, 32, 40

**LECY Series ▶ p. 94**

**Clean Room Specification ▶ p. 644**

**Secondary Battery Compatible ▶ p. 668**

**Motorless Type ▶ p. 827**

### How to Order

#### 1 Accuracy

Nil	Basic type
H	High-precision type

#### 2 Size

25
32
40

#### 3 Motor mounting position

Nil	In-line
R	Right side parallel
L	Left side parallel

#### 5 Lead [mm]

Symbol	LEFS25	LEFS32	LEFS40
H	20	24	30
A	12	16	20
B	6	8	10

#### 6 Stroke [mm]

50	50
to	to
1200	1200

#### 7 Motor option

Nil	Without option
B	With lock

#### 4 Motor type

Symbol	Type	Output [W]	Actuator size	Compatible driver	UL-compliant
S2*1	AC servo motor	100	25	LECSA□-S1	●
S3	(Incremental encoder)	200	32	LECSA□-S3	●
S4		400	40	LECSA2-S4	●
S6*1		100	25	LECSB□-S5 LECS□-S5 LECS□-S5	—
S7	AC servo motor (Absolute encoder)	200	32	LECSB□-S7 LECS□-S7 LECS□-S7	—
S8		400	40	LECSB2-S8 LECS□2-S8 LECS□2-S8	—
T6*2		100	25	LECSB2-T5 LECS□2-T5 LECS□2-T5	●
T7	AC servo motor (Absolute encoder)	200	32	LECSB2-T7 LECS□2-T7 LECS□2-T7	●
T8		400	40	LECSB2-T8 LECS□2-T8 LECS□2-T8	●

\*1 For motor type S2 and S6, the compatible driver part number suffixes are S1 and S5 respectively.  
\*2 For motor type T6, the compatible driver part number is LECS□2-T5.

#### 8 Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

\* If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 161.)  
\* Order auto switches separately. (For details, refer to pages 162 to 164.)  
\* When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

#### 9 Grease application (Seal band part)

Nil	With
N	Without (Roller specification)

#### 12 Cable length\*1 [m]

Nil	Without cable
2	2
5	5
A	10

\*1 The length of the encoder, motor, and lock cables are the same.

#### 10 Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

\*1 Refer to the body mounting example on page 166 for the mounting method.

#### 11 Cable type\*1 \*2

Nil	Without cable
S	Standard cable
R	Robotic cable (Flexible cable)

\*1 Motor cable and encoder cable are included. (Lock cable is also included if motor option "With lock" is selected.)  
\*2 Standard cable entry direction is "(B) Counter axis side." For motor parallel type of the ball screw drive, the cable entry direction is "(A) Axis side." (For details, refer to page 796.)

#### 13 Driver type

	Compatible drivers	Power supply voltage [V]	Size		
			25	32	40
Nil	Without driver	—	●	●	●
A1	LECSA1-S□	100 to 120	●	●	—

\* When a driver type is selected, a cable is included. Select the cable type and cable length.  
Example) S2S2: Standard cable (2 m) + Driver (LECS□2)  
S2: Standard cable (2 m)  
Nil: Without cable and driver

#### 14 I/O cable length [m]\*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

\*1 When "Without driver" is selected for driver type, only "Nil: Without cable" can be selected. Refer to page 797 if I/O cable is required. (Options are shown on page 797.)

#### Support Guide/LEFG Series

The support guide was designed to support workpieces with significant overhang.

#### Applicable Stroke Table

AC Servo Motor

## Specifications

### AC Servo Motor

Model			LEFS25S <sub>2</sub> /T6			LEFS32S <sub>3</sub> /T7			LEFS40S <sub>4</sub> /T8				
Actuator specifications	Stroke [mm] <sup>*1</sup>		50 to 800			50 to 1000			150 to 1200				
	Work load [kg] <sup>*2</sup>		Horizontal		10	20	20	30	40	45	30	50	60
			Vertical		4	8	15	5	10	20	7	15	30
	Max. speed [mm/s] <sup>*3</sup>	Stroke range	Up to 400	1500	900	450	1500	1000	500	1500	1000	500	
			401 to 500	1200	720	360	1500	1000	500	1500	1000	500	
			501 to 600	900	540	270	1200	800	400	1500	1000	500	
			601 to 700	700	420	210	930	620	310	1410	940	470	
			701 to 800	550	330	160	750	500	250	1140	760	380	
			801 to 900	—	—	—	610	410	200	930	620	310	
			901 to 1000	—	—	—	510	340	170	780	520	260	
			1001 to 1100	—	—	—	—	—	—	500	440	220	
	1101 to 1200	—	—	—	—	—	—	500	380	190			
	Max. acceleration/deceleration [mm/s <sup>2</sup> ]		20000 (Refer to pages 41 to 43 for limit according to work load and duty ratio.)										
	Positioning repeatability [mm]		Basic type		±0.02								
			High-precision type		±0.01								
Lost motion [mm] <sup>*4</sup>		Basic type		0.1 or less									
		High-precision type		0.05 or less									
Lead [mm]		20	12	6	24	16	8	30	20	10			
Impact/Vibration resistance [m/s <sup>2</sup> ] <sup>*5</sup>		50/20											
Actuation type		Ball screw (LEFS□), Ball screw + Belt (LEFS□ <sup>R</sup> )											
Guide type		Linear guide											
Static allowable moment <sup>*6</sup> [N·m]		Mep (Pitching)		27			46			110			
		Mey (Yawing)		27			46			110			
		Mer (Rolling)		52			101			207			
Operating temperature range [°C]		5 to 40											
Operating humidity range [%RH]		90 or less (No condensation)											
Motor output/Size		100 W/□40			200 W/□60			400 W/□60					
Motor type		AC servo motor (100/200 VAC)											
Encoder <sup>*9</sup>		Motor type S2, S3, S4: Incremental 17-bit encoder (Resolution: 131072 p/rev) Motor type S6, S7, S8: Absolute 18-bit encoder (Resolution: 262144 p/rev) Motor type T6, T7, T8: Absolute 22-bit encoder (Resolution: 4194304 p/rev) (For LECSB2-T□, LECSS2-T□) Motor type T6, T7, T8: Absolute 18-bit encoder (Resolution: 262144 p/rev) (For LECSC2-T□)											
Power [W] <sup>*7</sup>		Max. power 445			Max. power 725			Max. power 1275					
Type <sup>*8</sup>		Non-magnetizing lock											
Holding force [N]		78	131	255	131	197	385	220	330	660			
Power consumption at 20°C [W]		6.3			7.9			7.9					
Rated voltage [V]		24 VDC <sup>0</sup> <sub>-10%</sub>											

- \*1 Please consult with SMC for non-standard strokes as they are produced as special orders.
- \*2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 40.
- \*3 The allowable speed changes according to the stroke.
- \*4 A reference value for correcting an error in reciprocal operation
- \*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)  
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with

- the actuator in the initial state.)
- \*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.  
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.
- \*7 Indicates the max. power during operation (including the driver)  
When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.
- \*8 Only when motor option "With lock" is selected
- \*9 For motor type T6, T7, and T8, the resolution will change depending on the driver type.

## Dimensions: In-line Motor

### LEFS25

- \*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height 5 mm)  
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- \*2 This is the distance within which the table can move when it returns to origin.  
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
- \*3 The Z-phase first detecting position from the stroke end of the motor side

- \*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height 5 mm)  
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- \*2 This is the distance within which the table can move when it returns to origin.  
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
- \*3 The Z-phase first detecting position from the stroke end of the motor side

**Motorless Type** ▶ p. 827

### How to Order

#### ① Accuracy

Nil	Basic type
H	High-precision type

#### ② Size

25
32
40

#### ③ Motor mounting position

Nil	In-line
R	Right side parallel
L	Left side parallel

#### ④ Motor type

Symbol	Type	Output [W]	Size	Compatible drivers
V6*1	AC servo motor (Absolute encoder)	100	25	LECYM2-V5/LECYU2-V5
V7		200	32	LECYM2-V7/LECYU2-V7
V8		400	40	LECYM2-V8/LECYU2-V8

\*1 For motor type V6, the compatible driver part number suffix is V5.

#### ⑤ Lead [mm]

Symbol	LEFS25	LEFS32	LEFS40
H	20	24	30
A	12	16	20
B	6	8	10

#### ⑥ Stroke [mm]

50	50
to	to
1200	1200

#### ⑦ Motor option

Nil	Without option
B	With lock

#### ⑧ Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

#### ⑨ Grease application (Seal band part)

Nil	With
N	Without (Roller specification)

#### ⑩ Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

\*1 Refer to the body mounting example on page 166 for the mounting method.

#### ⑪ Cable type

Nil	Without cable
S	Standard cable
R	Robotic cable (Flexible cable)

#### ⑬ Driver type

	Compatible drivers	Power supply voltage [V]
Nil	Without driver	—
M2	LECYM2-V□	200 to 230
U2	LECYU2-V□	200 to 230

#### ⑭ I/O cable length [m]\*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

\*1 When "Without driver" is selected for driver type, only "Nil: Without cable" can be selected. Refer to page 808 if I/O cable is required. (Options are shown on page 808.)

### Applicable Stroke Table

Model	Stroke [mm]	●: Standard																					
		50	100	150	200	250	300	350	400	450	500	550	600	650	700	750	800	850	900	950	1000	1100	1200
LEFS25		●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	—	—	—	—	—	—
LEFS32		●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	—	—	—	—
LEFS40		—	—	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●	●

\* Please consult with SMC for non-standard strokes as they are produced as special orders.

For auto switches, refer to pages 161 to 164.

### Compatible Drivers

Driver type	MECHATROLINK-II type	MECHATROLINK-III type
Series	LECYM	LECYU
Applicable network	MECHATROLINK-II	MECHATROLINK-III
Control encoder	Absolute 20-bit encoder	
Communication device	USB communication, RS-422 communication	
Power supply voltage [V]	200 to 230 VAC (50/60 Hz)	
Reference page	801

- \*1 Please consult with SMC for non-standard strokes as they are produced as special orders.
- \*2 For details, refer to the “Speed–Work Load Graph (Guide)” on page 48.
- \*3 The allowable speed changes according to the stroke.
- \*4 A reference value for correcting an error in reciprocal operation
- \*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)  
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a

- perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
- \*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.  
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.
- \*7 Indicates the max. power during operation (including the driver)  
When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.
- \*8 Only when motor option “With lock” is selected

## Dimensions: In-line Motor

### LEFS25

- \*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height 5 mm)  
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- \*2 This is the distance within which the table can move when it returns to origin.  
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
- \*3 The Z-phase first detecting position from the stroke end of the motor side

# LEFS Series

AC Servo Motor

## Dimensions: Motor Parallel

### LEFS32R

\*1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more. (Recommended height 5 mm)

In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.

\*2 The Z-phase first detecting position from the stroke end of the motor side

Please consult with SMC for adjusting the Z-phase detecting position at the stroke end of the end side.

# Support Guide/For Ball Screw Drive

## LEFG Series LEFG16, 25, 32, 40

RoHS

Clean Room Specification ▶ p. 651

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

Application example

### 11 I/O cable length\*12

Nil	Without cable (Without communication plug connector)
1	1.5 m
3	3 m*13
5	5 m*13

### 12 Controller/Driver mounting

Nil	Screw mounting
D	DIN rail*14

- \*1 Please consult with SMC for non-standard strokes as they are produced as special orders.
- \*2 Excluding the LEF16
- \*3 If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 161.)
- \*4 Order auto switches separately. (For details, refer to pages 162 to 164.)
- \*5 When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.
- \*6 Refer to the body mounting example on page 166 for the mounting method.
- \*7 Produced upon receipt of order (Robotic cable only)
- \*8 The standard cable should only be used on fixed parts.  
For use on moving parts, select the robotic cable.  
Refer to pages 758 and 759 if only the actuator cable is required.

- \*9 For details on controllers/drivers and compatible motors, refer to the compatible controllers/drivers on the next page.
- \*10 Only available for the motor type "Step motor"
- \*11 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 736 separately.
- \*12 When "Without controllers/drivers" is selected for controller/driver types, I/O cable cannot be selected. Refer to page 713 (For LECA6), page 724 (For LECP1), or page 736 (For LECPA) if I/O cable is required.
- \*13 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector
- \*14 The DIN rail is not included. It must be ordered separately.
- \*15 Select "Nil" for anything other than DeviceNet™, CC-Link, or parallel input. Select "Nil," "S," or "T" for DeviceNet™ or CC-Link. Select "Nil," "1," "3," or "5" for parallel input.

## ⚠ Caution

### [CE-compliant products]

- ① EMC compliance was tested by combining the electric actuator LEF series and the controller LEC/JXC series.  
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.
- ② For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 713 for the noise filter set. Refer to the LECA series Operation Manual for installation.

### [UL-compliant products (For the LEC series)]

When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

## The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and actuator is correct.

### <Check the following before use.>

- ① Check the actuator label for the model number. This number should match that of the controller/driver.
- ② Check that the Parallel I/O configuration matches (NPN or PNP).

\* Refer to the Operation Manual for using the products. Please download it via our website: <https://www.smcworld.com>

# Electric Actuator/Slider Type Belt Drive

The LECSB-S, LECS-C-S, and LECS-S-S electric actuator drivers are to be discontinued. The LECSB-T, LECS-C-T, and LECS-S-T drivers are available as substitutes. In the product number, select T6 instead of S6, T7 instead of S7, or T8 instead of S8 for the **Motor type**, and select B2 instead of C1, C2 instead of C1, or S2 instead of S1 for the **Driver type**.

## LEFB Series LEFB25, 32, 40

LECY□ Series ▶ p. 140 Motorless Type ▶ p. 851

### How to Order

#### 1 Size

25
32
40

#### 2 Motor mounting position

Nil	Top mounting
U	Bottom mounting

#### 4 Equivalent lead

S	54 mm
---	-------

#### 5 Stroke

300	300 mm
to	to
3000	3000 mm

\* For details, refer to the applicable stroke table.

#### 6 Motor option

Nil	Without option
B	With lock

#### 7 Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

\* If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 161.)

\* Order auto switches separately. (For details, refer to pages 162 to 164.)

\* When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

#### 3 Motor type

Symbol	Type	Output [W]	Actuator size	Compatible driver	UL-compliant		
S2*1	AC servo motor	100	25	LECSA□-S1	●		
S3	(Incremental encoder)	200	32	LECSA□-S3	●		
S4	(Incremental encoder)	400	40	LECSA2-S4	●		
S6*1	AC servo motor (Absolute encoder)	100	25	LECSB□-S5	—		
S7				200	32	LECSB□-S7	—
S8				400	40	LECSB□-S8	—
T6*2	AC servo motor (Absolute encoder)	100	25	LECSB2-S5	—		
T7				200	32	LECSB2-S7	—
T8				400	40	LECSB2-S8	—
				LECS2-T5	●		
				LECS2-T7	●		
				LECS2-T8	●		

\*1 For motor type S2 and S6, the compatible driver part number suffixes are S1 and S5 respectively.

\*2 For motor type T6, the compatible driver part number is LECS□2-T5.

#### 8 Positioning pin hole

\*1 Refer to the body mounting example on page 166 for the mounting method.

#### 9 Cable type\*1 \*2

Nil	Without cable
S	Standard cable
R	Robotic cable (Flexible cable)

\*1 The motor and encoder cables are included. (The lock cable is also included when the motor with lock option is selected.)

\*2 Standard cable entry direction is "(A) Axis side." (Refer to page 796 for details.)

#### 10 Cable length [m]

Nil	Without cable
2	2
5	5
A	10

\* The length of the encoder, motor and lock cables are the same.

#### 11 Driver type

	Compatible drivers	Power supply voltage	Size

AC Servo Motor

## Specifications

### AC Servo Motor

Model		LEFB25S <sup>2</sup> /T6	LEFB32S <sup>3</sup> /T7	LEFB40S <sup>4</sup> /T8	
Actuator specifications	Stroke [mm] <sup>*1</sup>	300, 400, 500 600, 700, 800 900, 1000, (1100) 1200, (1300, 1400) 1500, (1600, 1700) (1800, 1900), 2000	300, 400, 500 600, 700, 800 900, 1000, (1100) 1200, (1300, 1400) 1500, (1600, 1700) (1800, 1900), 2000 2500	300, 400, 500 600, 700, 800 900, 1000, (1100) 1200, (1300, 1400) 1500, (1600, 1700) (1800, 1900), 2000 2500, 3000	
	Work load [kg] <sup>*2</sup>	Horizontal	5	15	25
	Max. speed [mm/s]		2000	2000	2000
	Max. acceleration/deceleration [mm/s <sup>2</sup> ]		20000 (Refer to page 50 for limit according to work load and duty ratio.) <sup>*3</sup>		
	Positioning repeatability [mm]		±0.06		
	Lost motion [mm] <sup>*4</sup>		0.1 or less		
	Equivalent lead [mm]		54		
	Impact/Vibration resistance [m/s <sup>2</sup> ] <sup>*5</sup>		50/20		
	Actuation type		Belt		
	Guide type		Linear guide		
	Static allowable moment <sup>*6</sup>	Mep (Pitching)	27	46	110
		Mey (Yawing)	27	46	110
		Mer (Rolling)	52	101	207
Operating temperature range [°C]		5 to 40			
Operating humidity range [%RH]		90 or less (No condensation)			
Motor output/Size		100 W/□40	200 W/□60	400 W/□60	
Motor type		AC servo motor (100/200 VAC)			
Encoder <sup>*9</sup>		Motor type S2, S3, S4: Incremental 17-bit encoder (Resolution: 131072 p/rev) Motor type S6, S7, S8: Absolute 18-bit encoder (Resolution: 262144 p/rev) Motor type T6, T7, T8: Absolute 22-bit encoder (Resolution: 4194304 p/rev) (For LECSB2-T□, LECS2-T□) Motor type T6, T7, T8: Absolute 18-bit encoder (Resolution: 262144 p/rev) (For LECS2-T□)			
Power [W] <sup>*7</sup>		Max. power 445	Max. power 725	Max. power 1275	
Type <sup>*8</sup>		Non-magnetizing lock			
Holding force [N]		27	54	110	
Power consumption at 20°C [W]		6.3	7.9	7.9	
Rated voltage [V]		24 <sup>0</sup> <sub>-10%</sub>			

\*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

\*2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 50.

\*3 Maximum acceleration/deceleration changes according to the work load. Check the "Work Load-Acceleration/Deceleration Graph" of the catalog.

\*4 A reference value for correcting an error in reciprocal operation

\*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

\*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

\*7 Indicates the max. power during operation (including the driver)

When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

\*8 Only when motor option "With lock" is selected

\*9 For motor type T6, T7, and T8, the resolution will change depending on the driver type.

## LEFB Series LEFB25, 32, 40

Click here for details.

LECS Series ▶ p. 124 Motorless Type ▶ p. 851

### How to Order

#### 1 Size

25
32
40

#### 2 Motor mounting position

Nil	Top mounting
U	Bottom mounting

#### 3 Motor type

Symbol	Type	Output [W]	Size	Compatible drivers
V6*1	AC servo motor (Absolute encoder)	100	25	LECYM2-V5/LECYU2-V5
V7		200	32	LECYM2-V7/LECYU2-V7
V8		400	40	LECYM2-V8/LECYU2-V8

\*1 For motor type V6, the compatible driver part number suffix is V5.

#### 4 Equivalent lead [mm]

S	54
---	----

#### 5 Stroke [mm]

300	300
to	to
3000	3000

#### 7 Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

\* If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 161.)

\* Order auto switches separately. (For details, refer to pages 162 to 164.)

\* When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

#### 10 Actuator cable length [m]

Nil	Without cable
3	3
5	5
A	10
C	20

#### 8 Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

\*1 Refer to the body mounting example on page 166 for the mounting method.

#### 6 Motor option

Nil	Without option
B	With lock

#### 9 Cable type

Nil	Without cable
S	Standard cable
R	Robotic cable (Flexible cable)

#### 12 I/O cable length [m]\*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

\*1 When "Without driver" is selected for driver type, only "Nil: Without cable" can be selected.

Refer to page 808 if I/O cable is required. (Options are shown on page 808.)

#### Applicable Stroke Table

	300	400	500	600	700	800	900	1000	1100	1200	1300	1400	1500	1600	1700	1800	1900	2000	2500	3000	Manufacturable stroke range [mm]
LEFB25	●	●	●	●	●	●	●	●	○	○	○	○	○	○	○	○	○	●	—	—	300 to 2000
LEFB32	●	●	●	●	●	●	●	●	○	○	○	○	○	○	○	○	○	●	●	—	300 to 2500
LEFB40	●	●	●	●	●	●	●	●	○	○	○	○	○	○	○	○	○	●	●	●	300 to 3000

\* Please consult with SMC for non-standard strokes as they are produced as special orders.

●: Standard/○: Produced upon receipt of order

#### Compatible Drivers

For auto switches, refer to pages 161 to 164.

Driver type	MECHATROLINK-II type	MECHATROLINK-III type
Series	LECYM	LECYU
Applicable network	MECHATROLINK-II	MECHATROLINK-III
Control encoder	Absolute 20-bit encoder	
Communication device	USB communication, RS-422 communication	
Power supply voltage [V]	200 to 230 VAC (50/60 Hz)	
Reference page	801

## Specifications

### AC Servo Motor

Model		LEFB25V6	LEFB32V7	LEFB40V8
Actuator specifications	Stroke [mm] <sup>*1</sup>	300, 400, 500 600, 700, 800 900, 1000, (1100) 1200, (1300, 1400) 1500, (1600, 1700) (1800, 1900), 2000	300, 400, 500 600, 700, 800 900, 1000, (1100) 1200, (1300, 1400) 1500, (1600, 1700) (1800, 1900), 2000 2500	300, 400, 500 600, 700, 800 900, 1000, (1100) 1200, (1300, 1400) 1500, (1600, 1700) (1800, 1900), 2000 2500, 3000
	Work load [kg] <sup>*2</sup>	Horizontal		5
	Max. speed [mm/s]	2000		2000
	Max. acceleration/deceleration [mm/s <sup>2</sup> ]	20000 (Refer to page 50 for limit according to work load and duty ratio.) <sup>*3</sup>		
	Positioning repeatability [mm]	±0.06		
	Lost motion [mm] <sup>*4</sup>	0.1 or less		
	Equivalent lead [mm]	54		
	Impact/Vibration resistance [m/s <sup>2</sup> ] <sup>*5</sup>	50/20		
	Actuation type	Belt		
	Guide type	Linear guide		
Static allowable moment <sup>*6</sup> [N·m]	Mep (Pitching)	27	46	110
	Mey (Yawing)	27	46	110
	Mer (Rolling)	52	101	207
Operating temperature range [°C]	5 to 40			
Operating humidity range [%RH]	90 or less (No condensation)			
Electric specifications	Motor output/Size	100 W/□40	200 W/□60	400 W/□60
	Motor type	AC servo motor (200 VAC)		
	Encoder	Absolute 20-bit encoder (Resolution: 1048576 p/rev)		
	Power [W] <sup>*7</sup>	Max. power 445	Max. power 725	Max. power 1275
Lock unit specifications	Type <sup>*8</sup>	Non-magnetizing lock		
	Holding force [N]	27	54	110
	Power consumption at 20°C [W]	5.5	6.0	6.0
	Rated voltage [V]	24 VDC <sup>+10%</sup> <sub>0</sub>		

\*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

\*2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 50.

\*3 Maximum acceleration/deceleration changes according to the work load. Check the "Work Load-Acceleration/Deceleration Graph (Guide)" of the catalog.

\*4 A reference value for correcting an error in reciprocal operation

\*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

\*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

\*7 Indicates the max. power during operation (including the driver)

When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

\*8 Only when motor option "With lock" is selected

# Support Guide/For Belt Drive

## LEFG Series LEFG16, 25, 32, 40

RoHS

### Application example

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

### How to Order

#### ① Size

16
25
32
40

#### ② Type of mounting pitch

Symbol	LEFG16	LEFG25	LEFG32	LEFG40	Note	
BT	●	●	●	—	Belt drive	Step motor/Servo motor (24 VDC)
BS	—	●	●	●		AC servo motor

#### ③ Stroke [mm]

300	300
to	to
3000	3000

#### ④ Grease application (Seal band part)

Nil	With
N*1	Without (Roller specification)

\*1 Only the mounting pitch type "BT" is applicable. All "BS" are roller specifications.

# LEF Series Auto Switch Mounting

## Auto Switch Mounting Position

Model	Size	A	B	Operating range
LEFS LEFB	25	45	51	4.9
	32	55	61	3.9
	40	79	85	5.3

- \* The applicable auto switch is D-M9 (N/P/B) (W) (M/L/Z).
- \* The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations depending on the ambient environment.
- \* Adjust the auto switch after confirming the operating conditions in the actual setting.

## Auto Switch Mounting

Rotate the bolts for auto switch mounting bracket three to four times to loosen them (Removing them is not required), and slide and remove the auto switch mounting bracket. Then, insert a switch into the groove on the mounting bracket.

As the mounting bolts for installing the product body interfere with the auto switch mounting bracket, mount the auto switch mounting bracket after installing the product body. After installing product body, tighten the bolts for the auto switch mounting bracket.

- \* The applicable auto switch is D-M9 (N/P/B) (W) (M/L/Z).
- \* The direction of the lead wire entry is specified. If it is mounted in the opposite direction, the auto switch may malfunction.
- \* Tighten the auto switch mounting screws (provided together with the auto switch), using a precision screwdriver with a handle diameter of approximately 5 to 6 mm.
- \* If more than two auto switch mounting brackets are required, please order them separately. All eight bolts for attaching the auto switch mounting bracket at the stroke end are tightened into the body when the product is shipped.  
For 50-mm stroke type, only four bolts are tightened on the motor side.

# Solid State Auto Switch Direct Mounting Type D-M9N/D-M9P/D-M9B

Refer to the SMC website for details on products that are compliant with international standards.

## Grommet

- 2-wire load current is reduced (2.5 to 40 mA).
- Using flexible cable as standard spec.

## Caution

### Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

## Auto Switch Specifications

PLC: Programmable Logic Controller

D-M9□, D-M9□V (With indicator light)			
Auto switch model	D-M9N	D-M9P	D-M9B
Electrical entry direction	In-line		
Wiring type	3-wire		2-wire
Output type	NPN	PNP	—
Applicable load	IC circuit, Relay, PLC		24 VDC relay, PLC
Power supply voltage	5, 12, 24 VDC (4.5 to 28 V)		—
Current consumption	10 mA or less		—
Load voltage	28 VDC or less	—	24 VDC (10 to 28 VDC)
Load current	40 mA or less		2.5 to 40 mA
Internal voltage drop	0.8 V or less at 10 mA (2 V or less at 40 mA)		4 V or less
Leakage current	100 μA or less at 24 VDC		0.8 mA or less
Indicator light	Red LED illuminates when turned ON.		
Standard	CE marking, RoHS		

## Oilproof Heavy-duty Lead Wire Specifications

Auto switch model		D-M9N	D-M9P	D-M9B

# Normally Closed Solid State Auto Switch Direct Mounting Type

## D-M9NE(V)/D-M9PE(V)/D-M9BE(V)

Refer to the SMC website for details on products that are compliant with international standards.

### Grommet

- Output signal turns on when no magnetic force is detected.
- Can be used for the actuator adopted by the solid state auto switch D-M9 series (excluding special order products)

### Caution

#### Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

### Auto Switch Specifications

# LEF Series Specific Product Precautions 1

Be sure to read this before handling the products. Refer to page 984 for safety instructions, pages 985 to 990 for electric actuator precautions, and pages 991 to 1000 for auto switch precautions.

## Design

### ⚠ Caution

- 1. Do not apply a load in excess of the specification limits.**  
Select a suitable actuator by work load and allowable moment. If a load in excess of the specification limits is applied to the guide, adverse effects such as the generation of play in the guide, reduced accuracy, or reduced service life of the product may occur.
- 2. Do not use the product in applications where excessive external force or impact force is applied to it.**  
This can cause a malfunction.

## Selection

### ⚠ Warning

- 1. Do not increase the speed in excess of the specification limits.**  
Select a suitable actuator by the relationship between the allowable work load and speed, and the allowable speed of each stroke. If the product is used outside of the specification limits, adverse effects such as the generation of noise, reduced accuracy, or reduced service life of the product may occur.
- 2. Do not use the product in applications where excessive external force or impact force is applied to it.**  
This can cause a malfunction.
- 3. When the product repeatedly cycles with partial strokes (see the table below), operate it at a full stroke at least once every few dozen cycles.**  
Failure to do so may result in the product running out of lubrication.

Model	Partial stroke
LEF□16	40 mm or less
LEF□25	65 mm or less
LEF□32	70 mm or less
LEF□40	105 mm or less

- 4. When external force is to be applied to the table, it is necessary to add the external force to the work load as the total carried load when selecting a size.**  
When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table will increase, which may lead to the malfunction of the product.
- 5. When the stroke exceeds 2000 mm, a joint needs to be added to the guide rail for extension. When passing over the joint, slight vibration may occur.**

Size	Stroke	A
32	2500	370
	3000	820
40	2500	320
	3000	820

## Handling

### ⚠ Caution

- 1. Set the [In position] in the step data to at least 0.5 (at least 1 for the belt type).**  
If it is set any lower, the completion signal of the [In position] may not be properly output.

## Handling

### ⚠ Caution

- 2. INP output signal**
  - 1) Positioning operation**  
When the product comes within the set range of the step data [In position], the INP output signal will turn ON.  
Initial value: Set to [0.50] or higher.
- 3. Never allow the table to collide with the stroke end except during return to origin.**  
When incorrect instructions are inputted, such as those which cause the product to operate outside of the specification limits or outside of the actual stroke through changes in the controller/driver settings and/or origin position, the table may collide with the stroke end of the actuator. Be sure to check these points before use.  
If the table collides with the stroke end of the actuator, the guide, belt, or internal stopper may break. This can result in abnormal operation.

Handle the actuator with care when it is used in the vertical direction as the workpiece will fall freely from its own weight.

- 4. The moving force should be the initial value.**  
If the moving force is set below the initial value, it may cause the generation of an alarm.
- 5. The actual speed of this actuator is affected by the work load and stroke.**  
Check the model selection section of the catalog.
- 6. Do not apply a load, impact, or resistance in addition to the transferred load during return to origin.**  
Additional force will cause the displacement of the origin position since it is based on the detected motor torque.
- 7. Do not dent, scratch, or cause other damage to the body or table mounting surfaces.**  
Doing so may cause unevenness in the mounting surface, play in the guide, or an increase in the sliding resistance.
- 8. Do not apply strong impact or an excessive moment while mounting a workpiece.**  
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.
- 9. Keep the flatness of the mounting surface within 0.1 mm/500 mm.**  
If a workpiece or base does not sit evenly on the body of the product, play in the guide or an increase in the sliding resistance may occur.
- 10. When mounting the product, secure a bending diameter of 40 mm or longer for the cable.**
- 11. Do not allow a workpiece to collide with the table during the positioning operation or within the positioning range.**
- 12. For the model where grease is applied to the dust seal band for sliding, when wiping off the grease to remove foreign matter, etc., be sure to reapply grease afterward.**
- 13. When bottom mounted, the dust seal band may become warped.**

# LEF Series Specific Product Precautions 2

Be sure to read this before handling the products. Refer to page 984 for safety instructions, pages 985 to 990 for electric actuator precautions, and pages 991 to 1000 for auto switch precautions.

## Handling

### Caution

#### 14. When mounting the product, use screws of adequate length and tighten them with adequate torque.

Tightening the screws with a higher torque than recommended may result in a malfunction and/or decrease in guide accuracy, while tightening with a lower torque can result in the displacement of the mounting position or, in extreme conditions, the actuator could become detached from its mounting position.

#### Body fixed

Model	Screw size	Max. tightening torque [N·m]	$\phi A$ [mm]	L [mm]
LEF□16	M3	0.6	3.5	20
LEF□25	M4	1.5	4.5	24
LEF□32	M5	3.0	5.5	30
LEF□40	M6	5.2	6.6	31

#### Body mounting

##### For housing B bottom

The traveling parallelism is the reference plane for the body mounting reference plane. If the traveling parallelism for a table is required, set the reference plane against parallel pins, etc.

##### For body bottom

#### Workpiece fixed

Model	Screw size	Max. tightening torque [N·m]	L (Max. screw-in depth) [mm]
LEF□16	M4 x 0.7	1.5	6
LEF□25	M5 x 0.8	3.0	8
LEF□32	M6 x 1	5.2	9
LEFS40	M8 x 1.25	12.5	13

To prevent the workpiece retaining screws from touching the body, use screws that are 0.5 mm or shorter than the maximum screw-in depth. If long screws are used, they may touch the body and cause a malfunction.

#### 15. Do not operate by fixing the table and moving the actuator body.

#### 16. The belt drive actuator cannot be used for vertical applications.

#### 17. Check the specifications for the minimum speed of each actuator.

Failure to do so may result in unexpected malfunctions such as knocking.

#### 18. In the case of the belt drive actuator, vibration may occur during operation at speeds within the actuator specifications due to the operating conditions. Change the speed setting to a speed that does not cause vibration.

#### 19. When fluctuations in the load are caused during operation, malfunction, noise, or alarm generation may occur. (In the case of the AC servo motor)

The gain tuning may not be suitable for fluctuating loads. Adjust the gain properly by following the instructions in the driver manual.

## Maintenance

### Warning

#### Maintenance frequency

Perform maintenance according to the table below.

Frequency	Appearance check	Internal check	Belt check
Inspection before daily operation	○	—	—
Inspection every 6 months/1000 km/ 5 million cycles*1	○	○	○

\*1 Select whichever comes first.

#### • Items for visual appearance check

1. Loose set screws, Abnormal amount of dirt, etc.
2. Check for visible damage, Check of cable joint
3. Vibration, Noise

#### • Items for internal check

1. Lubricant condition on moving parts
2. Loose or mechanical play in fixed parts or fixing screws

#### • Items for belt check

Stop operation immediately and replace the belt when any of the following occur. In addition, ensure your operating environment and conditions satisfy the requirements specified for the product.

##### a. Tooth shape canvas is worn out

Canvas fiber becomes fuzzy, Rubber is coming off and the fiber has become whitish, Lines of fibers have become unclear

##### b. Peeling off or wearing of the side of the belt

Belt corner has become rounded and frayed threads stick out

##### c. Belt is partially cut

Belt is partially cut, Foreign matter caught in the teeth of other parts is causing damage

##### d. A vertical line on belt teeth is visible

Damage which is made when the belt runs on the flange

##### e. Rubber back of the belt is softened and sticky

##### f. Cracks on the back of the belt are visible
