Prior to UseAuto Switches Common Specifications 1

Refer to the Auto Switch Precautions on pages 8 to 12 before using auto switches.

Auto Switches Common Specifications

Туре	Reed auto switch	Solid state auto switch		
Leakage current	t None 3-wire: 100 μA or less, 2-wire: 0.8 m/s			
Operating time	e 1.2 ms 1ms or less *3			
Impact resistance	300 m/s ² 1000 m/s ^{2 *4)}			
Insulation resistance	50 $M\Omega$ or more (500 VDC measured via megohmmeter) (Between lead wire and case			
Withstand voltage	1500 VAC for 1 minute *1) 1000 VAC for 1 minute (Between lead wire and case) (Between lead wire and case)			
Ambient temperature	−10 to 60°C			
Enclosure	IEC60529 Standard IP67 *2)			

- * 1) Electrical entry: Connector type (A73C/A80C/C73C/C80C): 1000 VAC/min. (Between lead wire and the case)
- * 2) The terminal conduit type (D-A3/A3□A'A3□C/G39/G39A/G39C/K39/K39A/K39C), DIN terminal type (D-A44/A44A/A44C) and heat resistant auto switch (D-F7NJ) conform to IEC60529 Standard IPA3

The trimmer type amplifier section (D-R□K) conforms to IP40.

The enclosure IP rating does not include the switch lead wire end.

For switches with a connector, the enclosure IP requirements are satisfied when the connector is connected.

- * 3) Excluding the solid state auto switches with a timer (G5NT/F7NT/F5NT types) and magnetic field resistant 2-color indicator solid state auto switch (D-P3DW□/P4DW).
 - The operating time for D-J51 is 2 ms or less and for D-P3DW□/P4DW are 40 ms or less.
- * 4) 980 m/s² for the trimmer type sensor section, 98 m/s² for the amplifier section.

Model	Lead wire length				
D-LC05	0.5 m				
D-LC30	3 m				
D-LC50	5 m				

Prior to UseAuto Switches Common Specifications 2

Refer to the Auto Switch Precautions on pages 8 to 12 before using auto switches.

Term	Meaning				
Hysteresis	A deviation amount between the ON position and OFF position caused by auto switch characteristics (difference in sensitivity between ON and OFF). When the switch is turned ON once and the switch (or piston) is moved in the opposition is distalted auto switch: 1 mm or less obsidisate auto switch: 1 mm or less turns OFF deviates to a position where it is further returned from the ON position. This deviation amount is called "hysteresis". Note) Hysteresis may fluctuate due to the operating environment.				
	position (OFF) Please contact SMC if hysteresis causes an operational problem.				
Most sensitive position	A position (sensor layout position) where the sensitivity is highest on the detection surface of the auto switch enclosure. When the center of the magnet is aligned with this position, this becomes almost the center of the operating range and stable operation can be obtained.				
Programmable Logic Controller (PLC)	One of elements making up the sequence control. The PLC is so designed that it receives signals, such as auto switch output and outputs them to other devices so as to perform the electrical control according to the preset program.				
Ambient temperature	A temperature range, in which the auto switch can be used. If significant temperature change or freezing occurs even in this temperature range, this may cause the auto switch to malfunction.				
Operating voltage	A voltage, at which the auto switch can be used. The operating voltage is indicated using generally used voltage (24 VDC or 100 VAC, etc.). For 2-wire type, the operating voltage has the same meaning as the power supply voltage or load voltage.				
Operating current range	A range of the current value that can be flowed to the output of the auto switch. If the operating current is lower than this range, the auto switch does not operate correctly. Conversely, if the operating current is higher than this range, this may cause the auto switch to break.				
Current consumption	This current value is necessary for the 3-wire type auto switch to operate the circuit through the power cable. For 2-wire type, as the current consumption is a part of the load current, it is not defined.				
Insulation resistance	A resistance between the electric circuit and enclosure. Unless otherwise described particularly, 50 M Ω (Min) is used for auto switch.				
Magnetic field resistant auto switch	An auto switch, for which measures against effects arising from external (welding) magnetic field generated in the spot welding process, etc. are taken. The solid state auto switch functions as it detects the frequency of the applied magnetic field. If the external magnetic field (AC) is applied, the last signal is retained not to be affected by the external magnetic field. This system can be used by the cylinder with normal magnetic force. The reed auto switch built-in a magnetic field shielded sensor with a low sensitivity to make the effect of the external magnetic field (DC or AC magnetic field) insusceptible. Therefore, a dedicated cylinder built-in the strong magnet needs to be selected and there is also an operable range (conditions).				
Impact resistance value	A minimum acceleration that may cause the auto switch to malfunction or break when the standard impact is applied.				
Water-resistant type auto switch	A model, long-term water resistance of which is improved by taking structural measures for the general (general purpose) product.				
Withstand voltage	A tolerance dose when the voltage is applied to the portion between the electrical circuit and enclosure. The withstand voltage shows a strength level of the product against the voltage. If a voltage exceeding the withstand voltage is applied, this may cause the product to break. (The voltage described here is different from the power supply voltage necessary to operate the product.)				
Proper mounting position	A dimension that shows the mounting position when the position is detected at the stroke end of the cylinder. As this position is set, the maximum sensitivity position is aligned with the center of the magnet. However, make the adjustment with the actual machine by considering the characteristic difference during actual setting. When an adjustment allowance is needed for the detection before the stroke, set a value with an adjustment allowance added to the proper mounting position.				
Applicable load	A device that is assumed as a target load of the auto switch.				
Operating time	A period of time until the auto switch output becomes stable after the magnetic force to operate the auto switch has been received.				
Operating range	An auto switch operating range in response to the cylinder piston movement (ON length in response to the stroke). The operating range is determined by the magnetic force of the magnet (range, in which the magnetic force acts) and switch sensitivity. So, the operating range may vary as these conditions are changed by the ambient environment, etc. The operating range in the standard status (normal temperature, single cylinder, magnetic force, and sensitivity, etc.) is described in the catalog.				

Prior to UseAuto Switches Common Specifications 3

Refer to the Auto Switch Precautions on pages 8 to 12 before using auto switches.

Term	Meaning						
Minimum Stroke for Auto Switch Mounting	A minimum stroke value of the auto switch that can be mounted on the cylinder. The minimum stroke is determined by the specification limit (auto switch operation or position setting ability, etc.) and physical limit (mechanical interference associated with the auto switch mounting). Note that the catalog shows the value assuming that the position detection is performed at the stroke end and this value does not consider the adjustment allowance. When an adjustment allowance is needed, such as detection before the stroke, a value is set that this adjustment allowance is added to the minimum stroke.						
Internal voltage drop	A voltage that is applied to the portion between the COM and signal line when the auto switch is ON. As only a value that the internal voltage drop is subtracted from the power supply voltage is applied to the input side of the PLC, the detection fault (incorrect input) may occur if this value is lower than the minimum operating voltage. So, take great care when selecting a device.						
2-Color Indicator	As the end part of the auto switch operating range (boundary between ON and OFF) is an area where is susceptible to the external disturbance or stroke change during cylinder operation, this function is intended to quickly and properly make the setting at the center of the operating range where the stable operation can be obtained by changing the operation indication color of the auto switch.						
Load	A device that is connected to the output of the auto switch so as to do any work is called "load". For example, the load is a relay or PLC, etc. To check the operation of the auto switch, a device equivalent to the load (such as resistor, etc.) is connected.						
Load current	A current that flows to the load when the ON-OFF output is ON.						
Enclosure	A class of protection against solid or water entry of the electrical machinery and apparatus specified in IEC60529. IP— Second characteristic numeral First characteristic numeral						
	■ First Characteristics: Degrees of protection against solid foreign objects ■ Non-protected 1 Protected against solid foreign objects of 50 mm ø and greater 2 Protected against solid foreign objects of 12 mm ø and greater 3 Protected against solid foreign objects of 2.5 mm ø and greater 4 Protected against solid foreign objects of 1.0 mm ø and greater 5 Dust-protected 5 Dust-protected 6 Dusttight ■ Second Characteristics: Degrees of protection against water 0 Non-protected 1 Protected against vertically falling water drops Protected against vertically falling water drops when enclosure tilted up to 15° 3 Protected against rainfall when enclosure tilted up to 60° 4 Protected against splashing water 5 Protected against splashing water 5 Protected against water jets 6 Protected against twe effects of temporary immersion in water 8 Protected against the effects of continuous immersion in water Example) In the case of stipulated as IP65, we can know the degrees of protection is dustlight and water jet-proof on the grounds that the first characteristic numeral is 5 respectively, that gives it will not be adversely affected by direct water jets from any direction.						
Solid state auto switch	A switch that detects the magnetic field by the MR element and incorporates the judgement circuit to turn ON or OFF the output regardless of the contact or non-contact of the mechanical contact like transistor (non-contact part).						
Leak current	A current that flows to operate the internal circuit when the ON-OFF output is OFF. In particular, if this leak current exceeds the detection current in the 2-wire type auto switch or PLC, this may cause reset fault. So, take great care when selecting a device.						
Reed auto switch	A switch that uses the reed switch to detect the magnetic field and turn ON or OFF the output by the contact or non-contact of the mechanical contact (contact part is provided like relay or limit switch).						
Induction load	A load that has the coil. The connection target of the auto switch is a relay.						
Recommended lead wire bending radius	A minimum bending radius (reference value) of the lead wire when the lead wire is secured and constructed (oscillation or rotation is not considered). (As the temperature or current value conforms to the auto switch specifications, this lead wire bending radius differs from the value disclosed by the electric wire manufacturer.)						
Electrical entry	A structure, in which the lead wire of the auto switch is taken out in the horizontal direction when the cylinder is laid out horizontally (cylinder rod is horizontal), is called "in-line entry". A structure, in which the lead wire is taken out in a direction perpendicular to the cylinder axis center, is called "perpendicular entry".

Contact Protection Box/CD-P11, CD-P12

<Applicable switch models>

D-A7/A8, D-A7 H/A80H, D-A73C, A80C, D-C7/C8, D-C73C/C80C, D-E7 A. E80A. D-Z7/Z8. D-9/9 A. D-A9/A9 V. D-A79W

The auto switches above do not have a built-in contact protection circuit.

A contact protection box is not required for solid state auto switches due to their construction.

- 1. Where the operation load is an inductive load.
- 2. Where the wiring length to load is greater than 5 m.
- 3. Where the load voltage is 100/200 VAC.

Therefore, use a contact protection box with the switch for any of the above cases:

The contact life may be shortened (due to permanent energizing conditions.) D-A72(H) must be used with the contact protection box regardless of load types and lead wire length since it is greatly affected by loads. (Where the load voltage is 110 VAC)

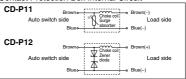

When the load voltage is increased by more than 10% to the rating of applicable auto switches (except D-A73C/A80C/C73C/C80C/90/97/A79W) above, use a contact protection box (CD-P11) to reduce the upper limit of the load current by 10% so that it can be set within the range of the load current range, 110 VAC.

Even for the built-in contact protection circuit type (D-A34[A][C], DA44[A][C], D-A54/A64, D-A59W, D-B59W), use the contact protection box when the wiring length to load is very long (over 30 m) and PLC (Programmable Logic Controller) with a large inrush current is used.

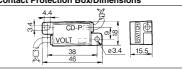

ontact Protection Box Specifications							
Part no.	CD-	P11	CD-P12				
oad voltage	100 VAC or less	200 VAC	24 VDC				
lay load current	25 m∆	12.5 m∆	50 m∆	-			

*Lead wire length - Auto switch connection side 0.5 m Load connection side

Contact Protection Box Internal Circuit

Contact Protection Box/Dimensions

Contact Protection Box Connection

To connect a switch unit to a contact protection box, connect the lead wire from the side of the contact protection box marked SWITCH to the lead wire coming out of the switch unit. Keep the switch as close as possible to the contact protection box, with a lead wire length of no more than 1 meter

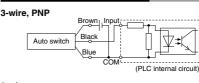

Prior to Use Auto Switch Connection and Example

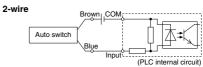

Sink Input Specifications

3-wire, NPN Brown Input Auto switch (PLC internal circuit)

2-wire Brown Input; Auto switch (PLC internal circuit)

Source Input Specifications

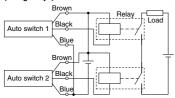

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

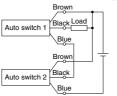

Example of AND (Series) and OR (Parallel) Connection

When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid. Depending on the operating environment, the product may not operate properly

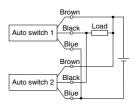

3-wire AND connection for NPN output (Using relays)

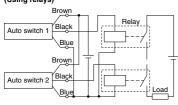

(Performed with auto switches only)

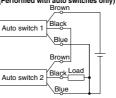

3-wire OR connection for NPN output

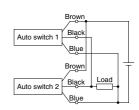

3-wire AND connection for PNP output (Using relays)

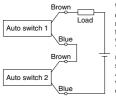

(Performed with auto switches only)

3-wire OR connection for PNP output

2-wire AND connection

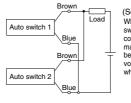

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with load voltage less than 20V cannot be used.

Load voltage at ON = Power supply voltage Residual voltage x 2 pcs. = 24 V - 4 V x 2 pcs.

Example: Power supply is 24 VDC Internal voltage drop in auto switch is 4 V.

2-wire OR connection

(Solid state) When two auto switches are connected in parallel. malfunction may occur because the load voltage will increase when in the OFF state.

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance

Example: Load impedance is 3 kΩ Leakage current from auto switch is 1 mA.

= 1 mA x 2 pcs. x 3 kΩ

(Reed)

Because there is no current leakage, the load voltage will not increase when turned OFF However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

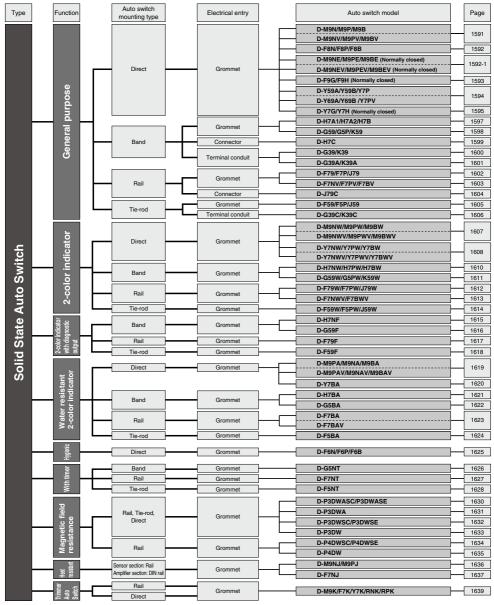

Solid State Auto Switches

General Purpose Type, 2-color Indicator, 2-color Indicator with Diagnostic Output, Water Resistant 2-color Indicator, Hygienic Type, Timer Equipped Type, Magnetic Field Resistant Type, Heat Resistant Type, Trimmer Auto Switch

Solid State Auto Switch Variations

Auto swit	tch model	D-Y7G	D-Y7H
	0.5 m (Nil)	10	
Lead wire length	3 m (L)	53	
5 m (Z)		8	7

Dimensions

(mm)

Made to Order Specifications: Solid State Auto Switch

Refer to SMC website for the details of the products conforming to the international standards.

With Pre-wired Connector

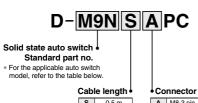

. Eliminates the harnessing work by cable with connector specifications

Adopts global standardized connector (IEC947-5-2)

• IP67 construction

How to Order

0.5 m 1.0 m

Connector model

Α	M8-3 pin
В	M8-4 pin
D	M12-4 pin

Note) Type A is not selectable for the auto switch with diagnostic output.

Connector Specifications

Connector model	M8-3 pin	M8-3 pin M8-4 pin				
Pin arrangement	1 4	3 4	② ① ③ ④			
Conformed standard	JIS C 4524, JIS C 4525, IEC 947-5-2, NECA 0402					
Impact resistance	300 m/s ²					
Enclosure	Only with screw tightened IP67 (IEC60529 standard)					
Insulation resistance	$100 \ \text{M}\Omega$ or more at 500 VDC measured via megohmmeter					
Withstand voltage	1500 VAC 1 minute (between contacts), Leak current 1 mA or less					

Applicable Auto Switch

For details on the D-P3DWA series magnetic field resistant auto switch, refer to page 1632. And for details on the D-P4DW series, refer to page 1634.

2-wire

Mounting	Function	Applicable model
Rail	_	J79, F7BV
mounting	2-color indicator	J79W, F7BWV
type	Water resistant	F7BA, F7BAV
		H7B
		K59
Band mounting	2-color	H7BW
type	indicator	K59W
1,7,2	Water	Н7ВА
	resistant	G5BA
Tie-rod	_	J59
mounting	2-color indicator	J59W
type	Water resistant	F5BA
		Y59B, Y69B
	_	M9B, M9BV
		F8B
Direct	Normally closed	M9BE, M9BEV
mounting	2-color	Y7BW, Y7BWV
type	indicator	M9BW, M9BWV
	Water	Y7BA
	resistant	M9BA, M9BAV
	Hygienic	F6B
Rotary		T791/2
actuator	_	T991/2, T99V1/2

Mounting	Function	Applicable model
Rail	_	F79, F7P, F7NV, F7PV
mounting	2-color indicator	F79W, F7PW, F7NWV
type	With timer	F7NT
	_	H7A1, H7A2
Band		G59, G5P
mounting	2-color	H7NW, H7PW
type	indicator	G59W, G5PW
	With timer	G5NT
Tie-rod		F59, F5P
mounting	2-color indicator	F59W, F5PW
type	With timer	F5NT
		Y59A, Y7P, Y69A, Y7PV
		M9N, M9P, M9NV, M9PV
		F8N, F8P
		Y7G, Y7H
Direct	Normally closed	F9G, F9H
mounting	0.0000	M9NE, M9PE, M9NEV, M9PEV
type	2-color	Y7NW, Y7PW, Y7NWV, Y7PWV
	indicator	M9NW, M9PW, M9NWV, M9PWV
	Water resistant	M9NA, M9NAV, M9PA, M9PAV
	Hygienic	F6N, F6P
Rotary		S791/2, S7P1/2
actuator	_	S991/2, S9P1/2, S99V1/2

4 wire

4-WIIE		
Mounting	Function	Applicable model
Rail mounting type	Direct mounting type	F79F
Band mounting		H7NF
type		G59F
Tie-rod mounting type		F59F

Note) M8-3 pins are not selectable for the 4-wire auto switch.

Connector pin arrangement

	Sensor type	Meaning of contact number				
		1 pin	2 pin	3 pin	4 pin	
	2-wire	OUT(+)	_	_	OUT(-)	
	3-wire	DC(+)	_	DC(-)	OUT	
	4-wire	DC(+)	Diagnostic output	DC(-)	OUT	

Note1) For details on the D-P3DWASC and D-P3DWASE, refer to page 1630. And for details on the D-P4DWSC and D-P4DWSE, refer to page 1634.

Note2) For details on the pin arrangement, refer to the pin arrangement in the connector specifications above.

With Pre-wired Connector

Dimensions

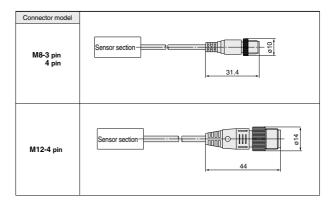

M12-4 pin

Connection (Female side) Connector Cable

As the parts are not supplied from SMC, refer to the application examples listed in the below. (For detail such as catalog availability, etc., please contact each manufacturer.)

, , , , , , , , , , , , , , , , , , , ,				
Connector size	Number of pins	Manufacturer	Applicable series example	
	3	Phoenix Contact	SAC-3P	
M8		Corrence Corporation	M8-3D	
INIO	4		M8-4D	
		OMROM Corporation	XS3	
		Phoenix Contact	SAC-4P	
		Corrence Corporation	VA-4D	
M12		OMROM Corporation	XS2	
MIZ		Azbil Corp.	PA5-4I	
		HIROSE ELECTRIC CO., LTD.	HR24	
		DDK Ltd.	CM01-8DP4S	

Weight for Connector Type

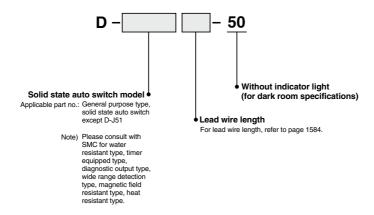

<u> </u>	71	
Part no.	Connector type	Weight
D-□□□APC	M8-3 pin	4 g
D-□□□BPC	M8-4 pin	4 g
D-□□□DPC	M12-4 pin	About 11 g

Made to Order Specifications: Solid State Auto Switch -50: Without Indicator Light (Dark room) Specifications -61: Oilproof Flexible Heavy-duty Cord Specifications

2 Without Indicator Light (for dark room specifications)

Symbol -50

Possible to use under the environment which hates a light.

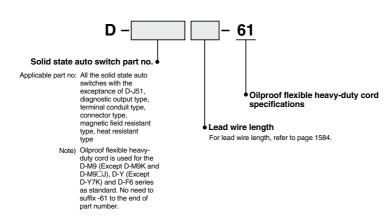

Dimensions and specifications are common as standard products with the exception of no indicator light.

3 Oilproof Flexible Heavy-duty Cord Specifications

Symbol -61

This is the product which uses a heavy-duty cord having flexible characteristics 5 times (SMC comparison) as strong as oilproof heavy-duty cord used in the standard products.

Dimensions are identical with D-F5 type, G5 type, J59 type, K59 type. Lead wire diameter is changed from ø4 to ø3.4. In other series products, it is common as standard product's specifications.
