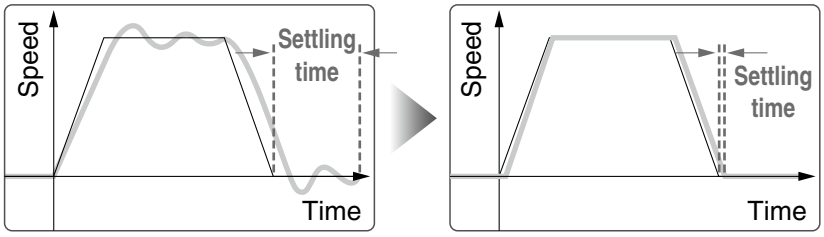
*1 For positioning types, the settings need to be changed in order to use the max. set values. Setup software (MR Configurator2™) LEC-MRC2 is required.
*2 Available when a Mitsubishi motion controller is used as upper level equipment
*3 Available when a motion controller is used as upper level equipment
*4 The LECSB2-T is only applicable when the control method is positioning. The point table is used to set the pushing operation settings.
When selecting the LECSS2-T, combine it with upper level equipment (such as the Simple Motion module manufactured by Mitsubishi Electric Corporation) which has a pushing operation function.
** For customer-provided PLC and motion controller setting and usage instructions, confirm with the retailer or manufacturer.
*5 The LECSB2-T can be used by adding the "MR Configurator2 dedicated file for the LECSB-T" to the setup software (MR Configurator2™: LEC-MRC2□).
Please download this dedicated file from the SMC website: https://www.smcworld.com
*6 Only supports PROFINET and EtherCAT

Gain adjustment using auto tuning

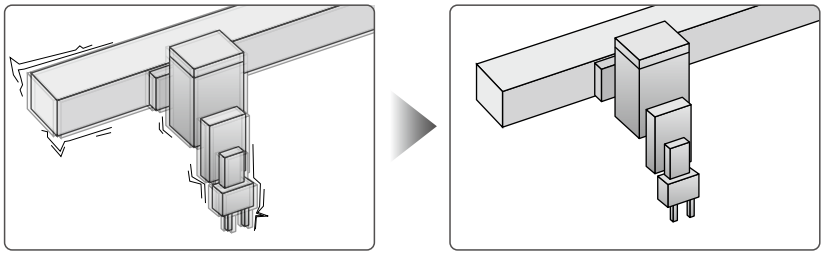
Auto-tuning function

- Controls the difference between the command value and the actual action



Vibration suppression control function

- Automatically suppresses low-frequency machine vibrations (1 to 100 Hz)

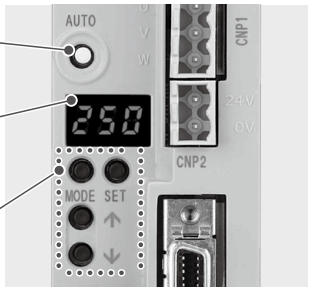


With display setting function

One-touch adjustment button
One-touch servo adjustment

Display
Display the monitor, parameters, and alarm.

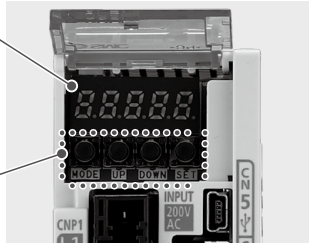
Settings
Set the parameters, monitor display, etc., with push buttons.



LECSA

Display
Display the monitor, parameters, and alarm.

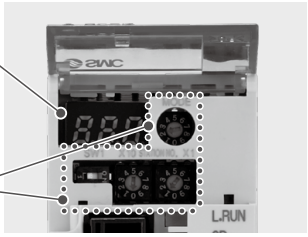
Settings
Set the parameters, monitor display, etc., with push buttons.



(With the front cover opened)
LECSB-T

Display
Display the communication status with the driver, the alarm, and the point table no.

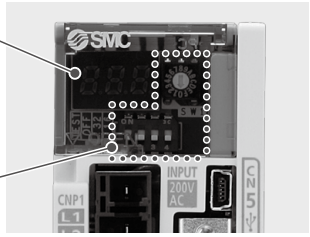
Settings
Control the Baud rate, station number, and the occupied station count.



(With the front cover opened)
LECSC-T

Display
Display the communication status with the driver and the alarm.

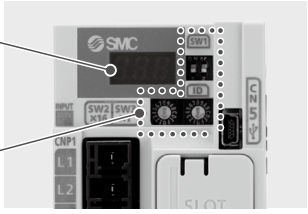
Settings
Switches for axis setting, control axis deactivation, switching to the test operation, etc.



LECSS2-T

Display
Display the communication status with the driver and the alarm.

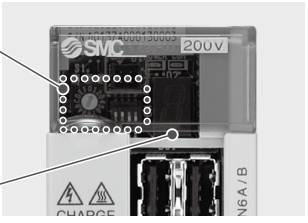
Settings
Switches for axis setting, switching to the test operation, etc.



LECSN-T

Settings
Switches for station address, communication speed, number of transmission bytes, etc.

Display
Display the driver status and alarm.



LECYM

Settings
Switches for station address, number of transmission bytes, etc.

Display
Display the driver status and alarm.

Incremental Type

LECSA Series (Pulse input type/Positioning type)

- **Up to 7 positioning points by point table**
- **Input type**: Pulse input
- **Control encoder**: Incremental 17-bit encoder (Resolution: 131072 p/rev)
- **Parallel input**: 6 inputs
  output: 4 outputs

Absolute Type

LECSB-T Series (Pulse input type/Positioning type)

- **Positioning by up to 255 point tables**
- **Input type**: Pulse input (Sink (NPN) type interface/Source (PNP) type interface)
- **Control encoder**: Absolute 22-bit encoder (Resolution: 4194304 p/rev)
- **STO (Safe Torque Off) safety function available**
- **Parallel input**: 10 inputs
  output: 6 outputs

LECSC-T Series (CC-Link direct input type)

- **Position data/speed data setting and operation start/stop**
- **Positioning by up to 255 point tables (when 2 stations are occupied)**
- **Up to 32 drivers can be connected (when 2 stations are occupied) with CC-Link communication.**
- **Applicable Fieldbus protocol**: CC-Link (Ver. 1.10, Max. communication speed: 10 Mbps)
- **Control encoder**: Absolute 18-bit encoder (Resolution: 262144 p/rev)

LECSN-T Series (Network card type)

- **Supports 3 types of network card (EtherCAT, EtherNet/IP™, and PROFINET)**
- **STO (Safe Torque Off) safety function available**
- **Control encoder:** Absolute 22-bit encoder (Resolution: 4194304 p/rev)

LECSS-T Series (SSCNET Ⅲ/H type)

- **Applicable Fieldbus protocol**:
  (High-speed optical communication, max. bidirectional communication speed: 150 Mbps)
- **Bidirectional communication speed**: 3 times
- **SSCNET Ⅲ/H and SSCNET Ⅲ products are compatible.**
- **Improved noise resistance**
- **STO (Safe Torque Off) safety function available**
- **Control encoder**: Absolute 22-bit encoder (Resolution: 4194304 p/rev)

AC Servo Motor Driver

LECY□ Series

Power supply voltage	200 to 230 VAC
Motor capacity	100/200/400 W

Absolute Type

LECYM Series (MECHATROLINK-Ⅱ type)

- **Applicable Fieldbus protocol**: MECHATROLINK-Ⅱ
- **Number of connectable drivers**: 30 units (Transmission distance: Max. 50 m in total)
- **Max. transmission speed**: 10 Mbps
- **Min. transmission cycle**: 250 µs
- **Control encoder**: Absolute 20-bit encoder (Resolution: 1048576 p/rev)
- **STO (Safe Torque Off) safety function available**
- **Compliant with the SEMI F47 Standard (Torque limit for low DC power supply voltage for main circuit)**

LECYU Series (MECHATROLINK-Ⅲ type)

- **Applicable Fieldbus protocol**: MECHATROLINK-Ⅲ
- **Number of connectable drivers**: 62 units (Transmission distance: Max. 75 m between stations)
- **Max. transmission speed**: 100 Mbps
- **Min. transmission cycle**: 125 µs
- **Control encoder**: Absolute 20-bit encoder (Resolution: 1048576 p/rev)
- **STO (Safe Torque Off) safety function available**
- **Compliant with the SEMI F47 Standard (Torque limit for low DC power supply voltage for main circuit)**

How to Order

For LECSA

LECSA

LECS A 1 − S1

Driver type

A	Pulse input type/Positioning type (For incremental encoder)

Power supply voltage

1	100 to 120 VAC, 50/60 Hz
2	200 to 230 VAC, 50/60 Hz

Compatible motor type

Symbol	Type	Capacity	Encoder
S1	AC servo motor (S2∗1)	100 W	Incremental
S3	AC servo motor (S3∗1)	200 W	
S4	AC servo motor (S4∗1)∗2	400 W	

∗1 The symbol shows the motor type (actuator).
∗2 Only available for power supply voltage “200 to 230 VAC”

∗ **If an I/O connector is required, order the part number “LE-CSNA” separately.**
∗ **If an I/O cable is required, order the part number “LEC-CSNA-1” separately.**

For LECSB-T/LECSC-T/LECSS-T

LECSB-T LECSC-T LECSS-T

LECS B 2 − T5

Driver type

B	Pulse input type/Positioning type (For absolute encoder)
C	CC-Link direct input type (For absolute encoder)
S	SSCNETⅢ/H type (For absolute encoder)

Power supply voltage

2	200 to 240 VAC, 50/60 Hz (For LECSB2-T/LECSS2-T)
	200 to 230 VAC, 50/60 Hz (For LECSC2-T)

Compatible motor type

Symbol	Type	Capacity	Encoder
T5	AC servo motor (T6∗1)	100 W	Absolute
T7	AC servo motor (T7∗1)	200 W	
T8	AC servo motor (T8∗1)	400 W	
T9	AC servo motor (T9∗1)	750 W	

∗1 The symbol shows the motor type (actuator).

∗ **If an I/O connector is required, order the part number “LE-CSN□” separately.**
∗ **If an I/O cable is required, order the part number “LEC-CSN□-1” separately.**
(Since the electric actuator will not operate without forced stop (EM2) wiring when using the LECSB-T in any mode other than positioning mode, an I/O connector or an I/O cable is required.)

For LECSN-T

LECSN-T

LECS N 2 − T5 − 9

Driver type

N	Network card type (For absolute encoder)

Power supply voltage

2	200 to 240 VAC, 50/60 Hz

Compatible motor type

Symbol	Type	Capacity	Encoder
T5	AC servo motor (T6∗1)	100 W	Absolute
T7	AC servo motor (T7∗1)	200 W	
T8	AC servo motor (T8∗1)	400 W	
T9	AC servo motor (T9∗1)	750 W	

∗1 The symbol shows the motor type (actuator).

Network card type∗1

Nil	Without network card
E	EtherCAT
9	EtherNet/IP™
P	PROFINET

∗1 Only the “Without network card” option is UL compliant.

∗ **If an I/O connector is required, order the part number “LE-CSNS” separately.**
∗ **If an I/O cable is required, order the part number “LEC-CSNS-1” separately.**

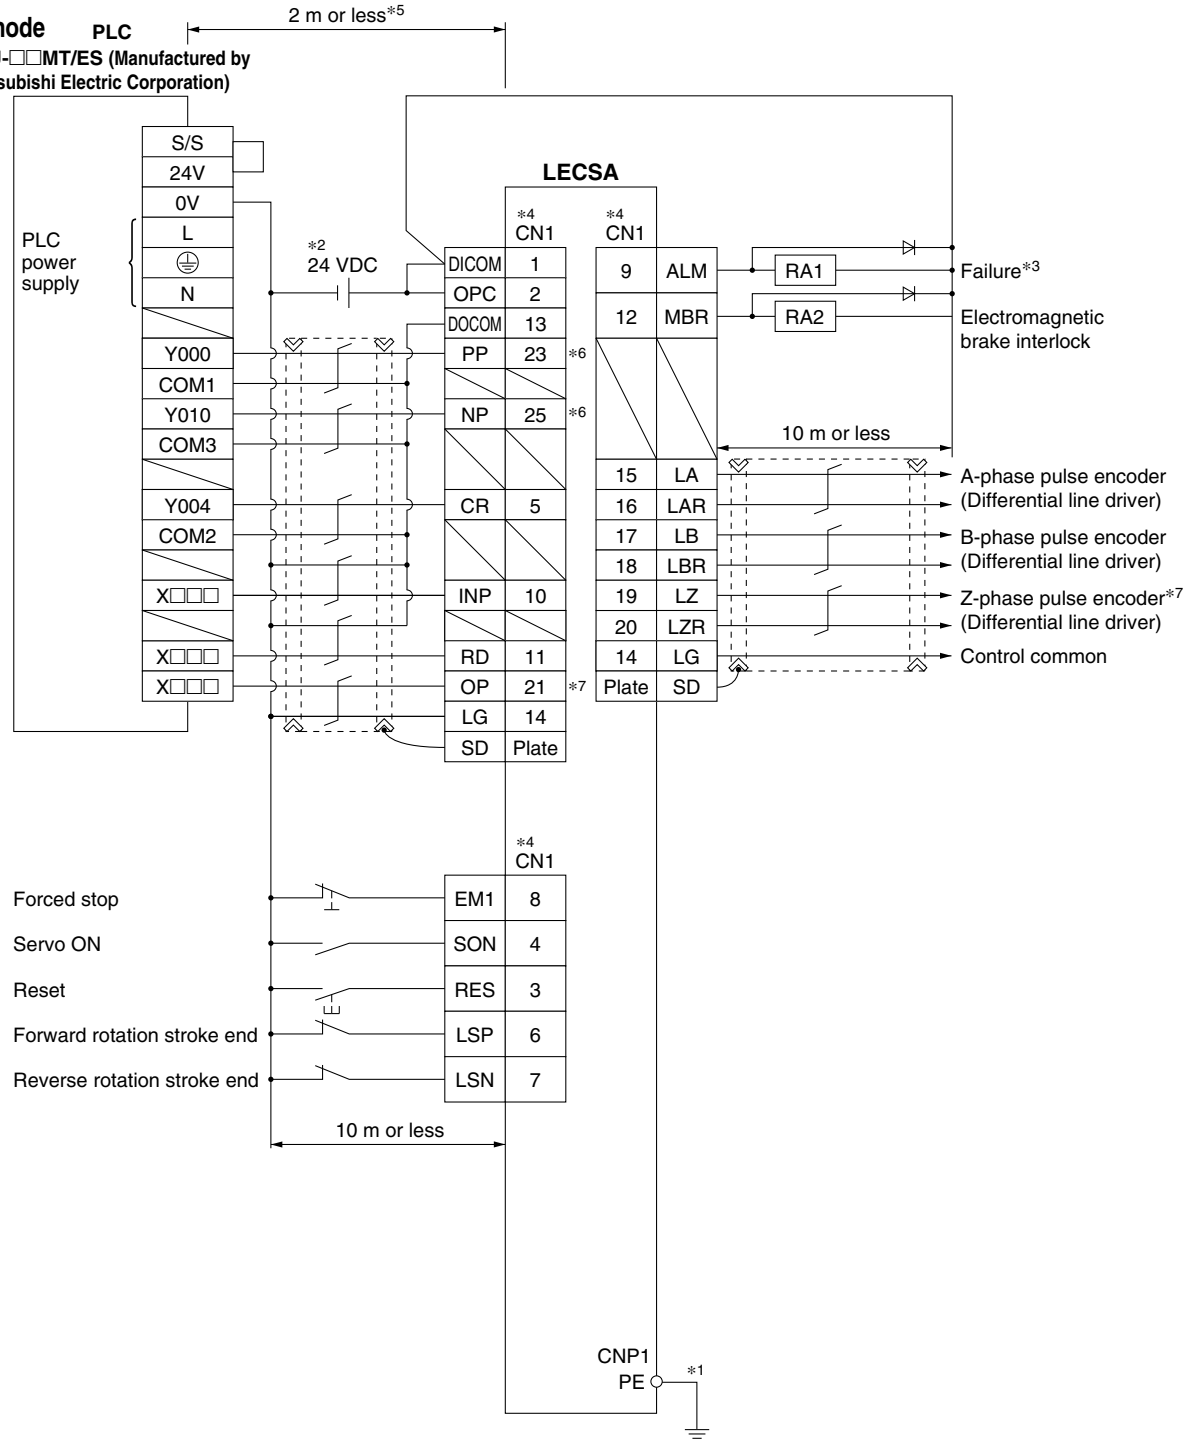
Control Signal Wiring Example: LECSA

LECSA□-□

This wiring example shows connection with a PLC (FX3U-□□MT/ES) manufactured by Mitsubishi Electric Corporation as when used in position control mode. Refer to the LECSA series Operation Manual and any technical literature or operation manuals for your PLC and positioning unit before connecting to another PLC or positioning unit.

Position control mode



*1 For preventing electric shock, be sure to connect the driver main circuit power supply connector (CNP1)'s protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).

*2 For interface use, supply 24 VDC ±10% 200 mA using an external source. 200 mA is the value when all I/O command signals are being used. In addition, reducing the number of inputs/outputs can decrease the current capacity. Refer to the Operation Manual for required current for interface.

*3 The failure (ALM) is normally ON. When it is OFF (alarm occurs), stop the PLC signal using the sequence program.

*4 Signals of the same name are connected inside the driver.

*5 For command pulse input with an open collector method. When a positioning unit loaded with a differential line driver method is used, it is 10 m or less.

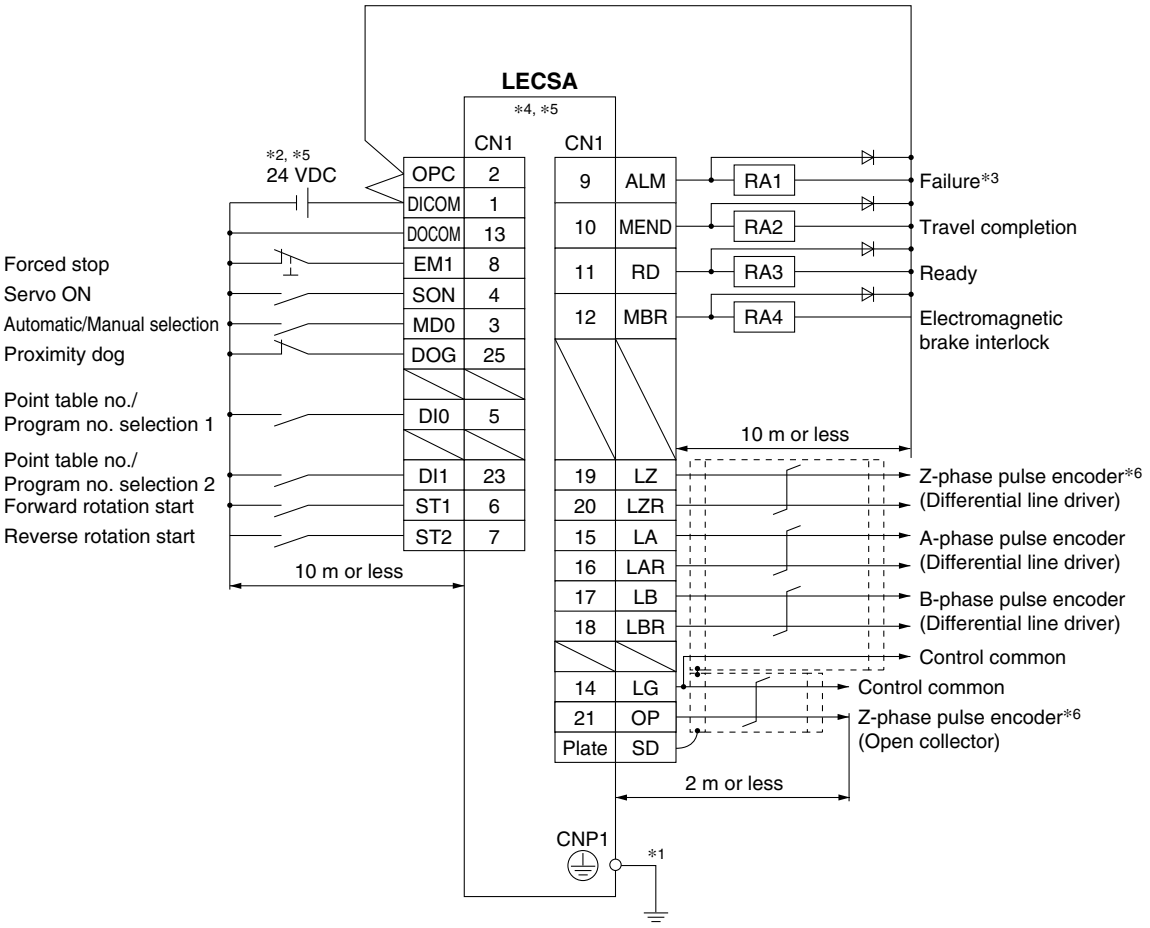
*6 If the command pulse input is open collector method, it supports only the sink (NPN) type interface. It does not correspond to the source (PNP) type interface.

*7 The Z-phase pulse encoder corresponds to the differential line driver method and the open collector method. If the Z-phase pulse encoder is using the open collector method, it supports only the sink (NPN) type interface. It does not correspond to the source (PNP) type interface.

Control Signal Wiring Example: LECSA

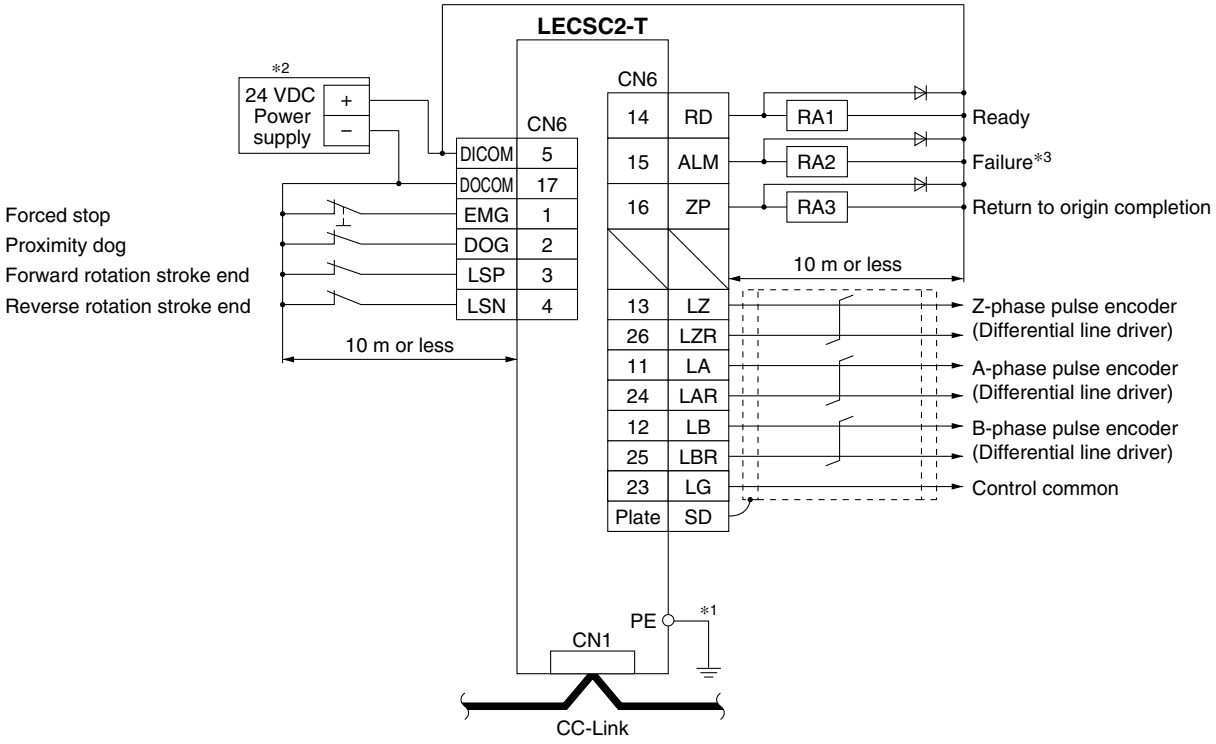
In this wiring example, the device of the CN1-10 pin in the initial status has been changed to the device shown below. For details on the device and changing method, refer to the LECSA series Operation Manual.
CN1-10: MEND (Travel completion)

Positioning mode (Point table method)
For sink (NPN) I/O interface



*1 For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).
*2 For interface use, supply 24 VDC ±10% 200 mA using an external source. 200 mA is the value when all I/O command signals are being used. In addition, reducing the number of inputs/outputs can decrease the current capacity.
*3 The failure (ALM) is normally ON.
*4 Signals of the same name are connected inside the driver.
*5 The wiring example is for the sink (NPN) type interface. Refer to the LECSA series Operation Manual for the source (PNP) type interface. Note that the 23 pin and 25 pin cannot be used for the source type interface.
*6 The Z-phase pulse encoder corresponds to the differential line driver method and the open collector method. If the Z-phase pulse encoder is using the open collector method, it supports only the sink (NPN) type interface. It does not correspond to the source (PNP) type interface.

Control Signal Wiring Example: LECSC2-T□

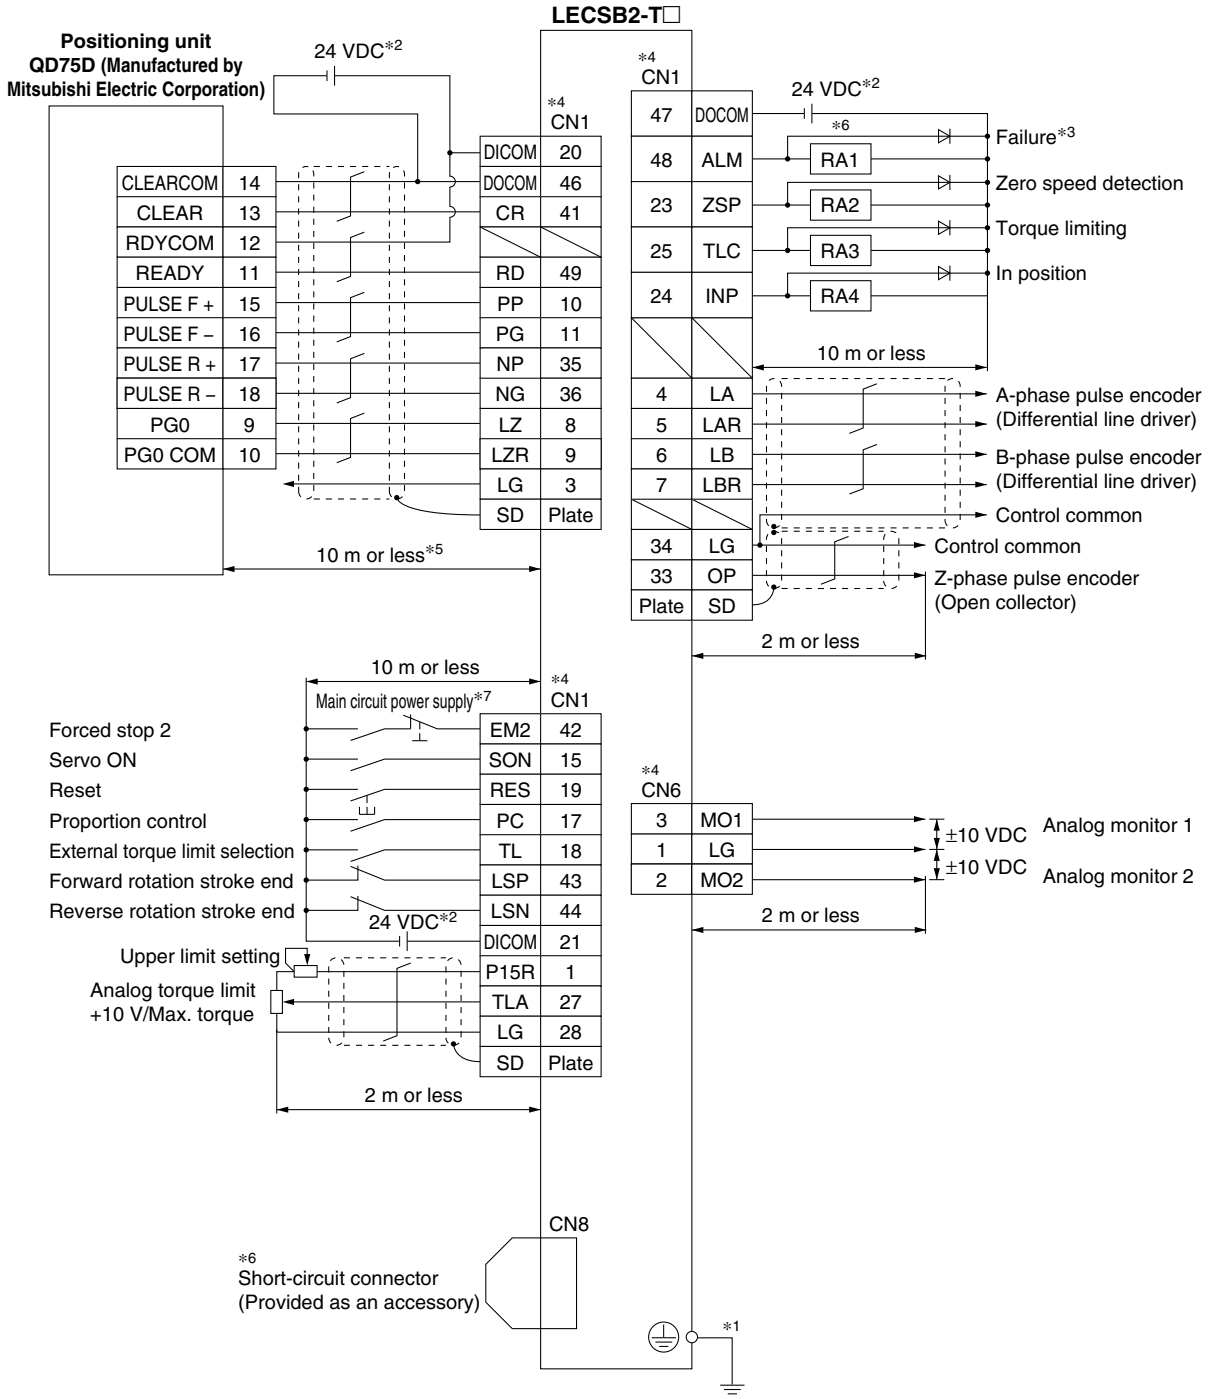


*1 For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).
*2 For interface use, supply 24 VDC ±10% 150 mA using an external source.
*3 The failure (ALM) is normally ON. When it is OFF (alarm occurs), stop the PLC signal using the sequence program.

Control Signal Wiring Example: LECSB2-T□

This wiring example shows connection with a positioning unit (QD75D) manufactured by Mitsubishi Electric Corporation as when used in position control mode. Refer to the LECSB2-T series Operation Manual and any technical literature or operation manuals for your PLC and positioning unit before connecting to another PLC or positioning unit.

Position control mode
For sink (NPN) I/O interface

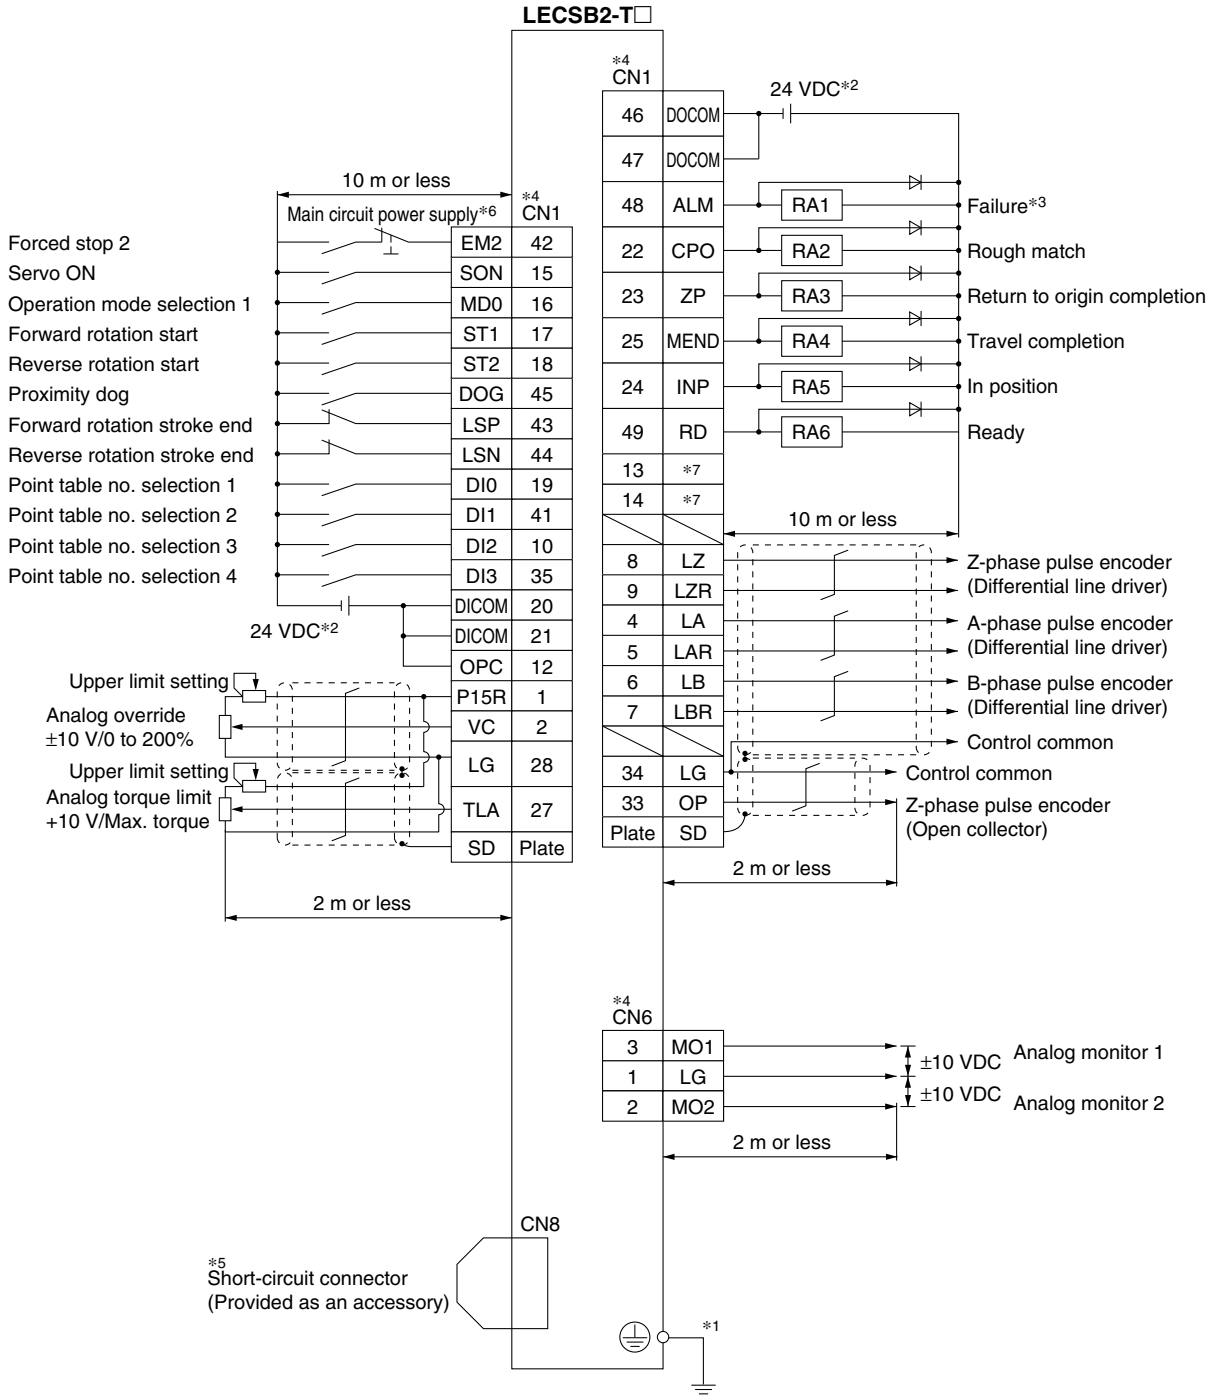


*1 For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).
*2 For interface use, supply 24 VDC ±10% using an external source. Set the total current capacity to 500 mA. 500 mA is the value when all I/O command signals are being used. In addition, reducing the number of inputs/outputs can decrease the current capacity.
*3 The failure (ALM) is normally ON. When it is OFF (alarm occurs), stop the PLC signal using the sequence program.
*4 Signals of the same name are connected inside the driver.
*5 For command pulse input with a differential line driver method. For open collector method, it is 2 m or less.
*6 When not using the STO function, use the driver with the short-circuit connector (provided as an accessory) inserted.
*7 Configure a circuit to turn off EM2 when the main circuit power is turned off to prevent any unexpected restarts of the driver.

Control Signal Wiring Example: LECSB2-T□

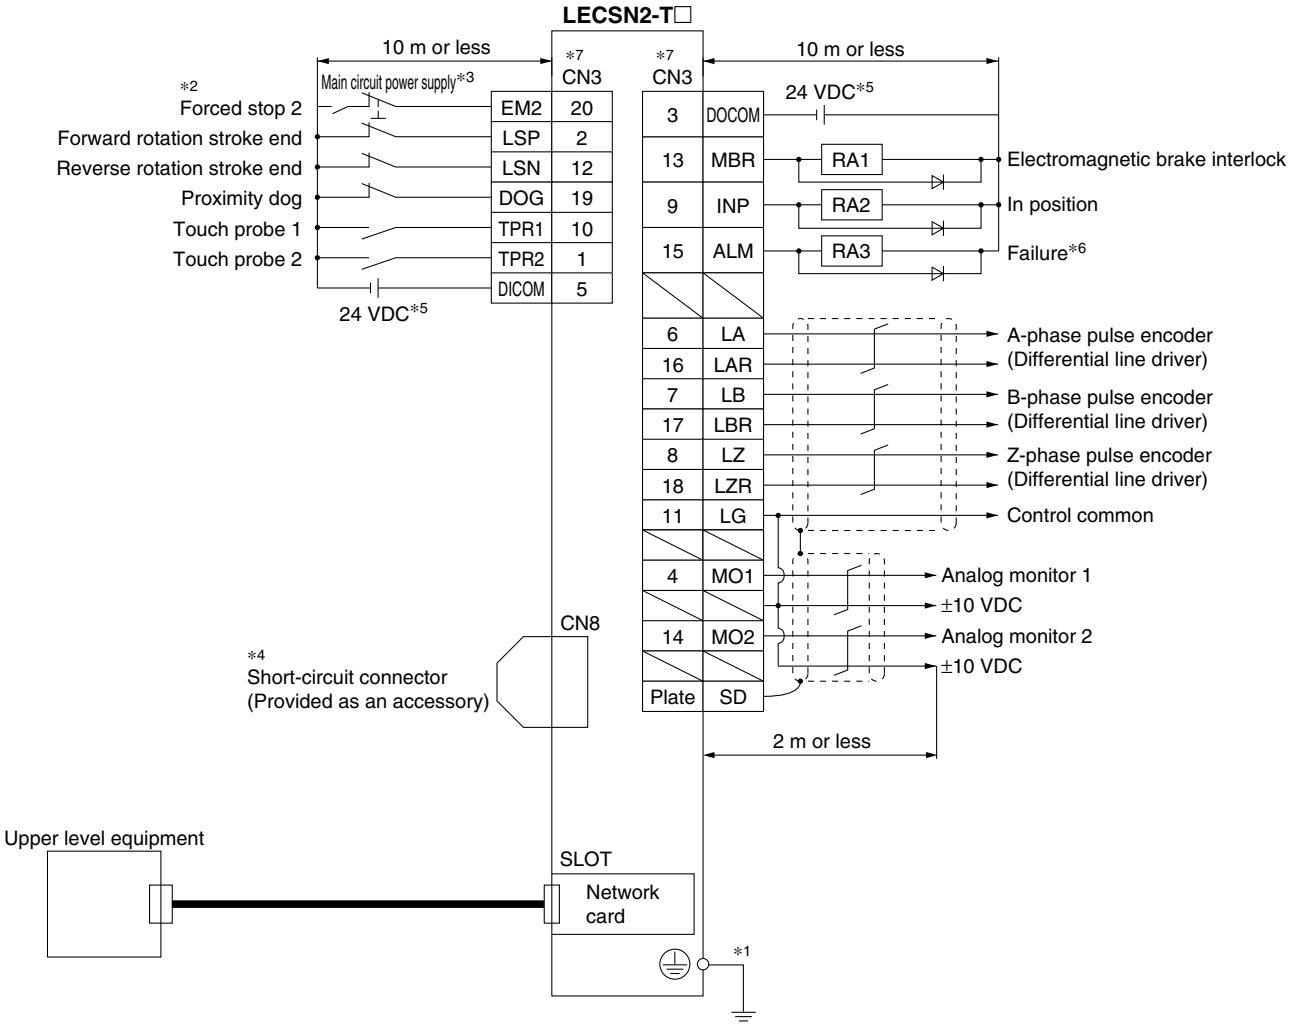
In this wiring example, the devices of the CN1-22 pin, CN1-23 pin, and CN1-25 pin in the initial status have been changed to the devices shown below. For details on the devices and changing method, refer to the LECSB2-T series Operation Manual.
CN1-22: CPO (Rough match)/CN1-23: ZP (Return to origin completion)/CN1-25: MEND (Travel completion)

Positioning mode (Point table method)
For sink (NPN) I/O interface



*1 For preventing electric shock, be sure to connect the servo amplifier's protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).
*2 For interface use, supply 24 VDC ±10% using an external source. Set the total current capacity to 500 mA. 500 mA is the value when all I/O command signals are being used. In addition, reducing the number of inputs/outputs can decrease the current capacity.
*3 The ALM (Failure) is normally ON. (Normally closed contact)
*4 Signals of the same name are connected inside the servo amplifier.
*5 When not using the STO function, use the servo amplifier with the short-circuit connector (provided as an accessory) inserted.
*6 Configure a circuit to turn off EM2 when the main circuit power is turned off to prevent any unexpected restarts of the driver.
*7 Output devices are not assigned in the initial status. Assign the output devices as necessary.

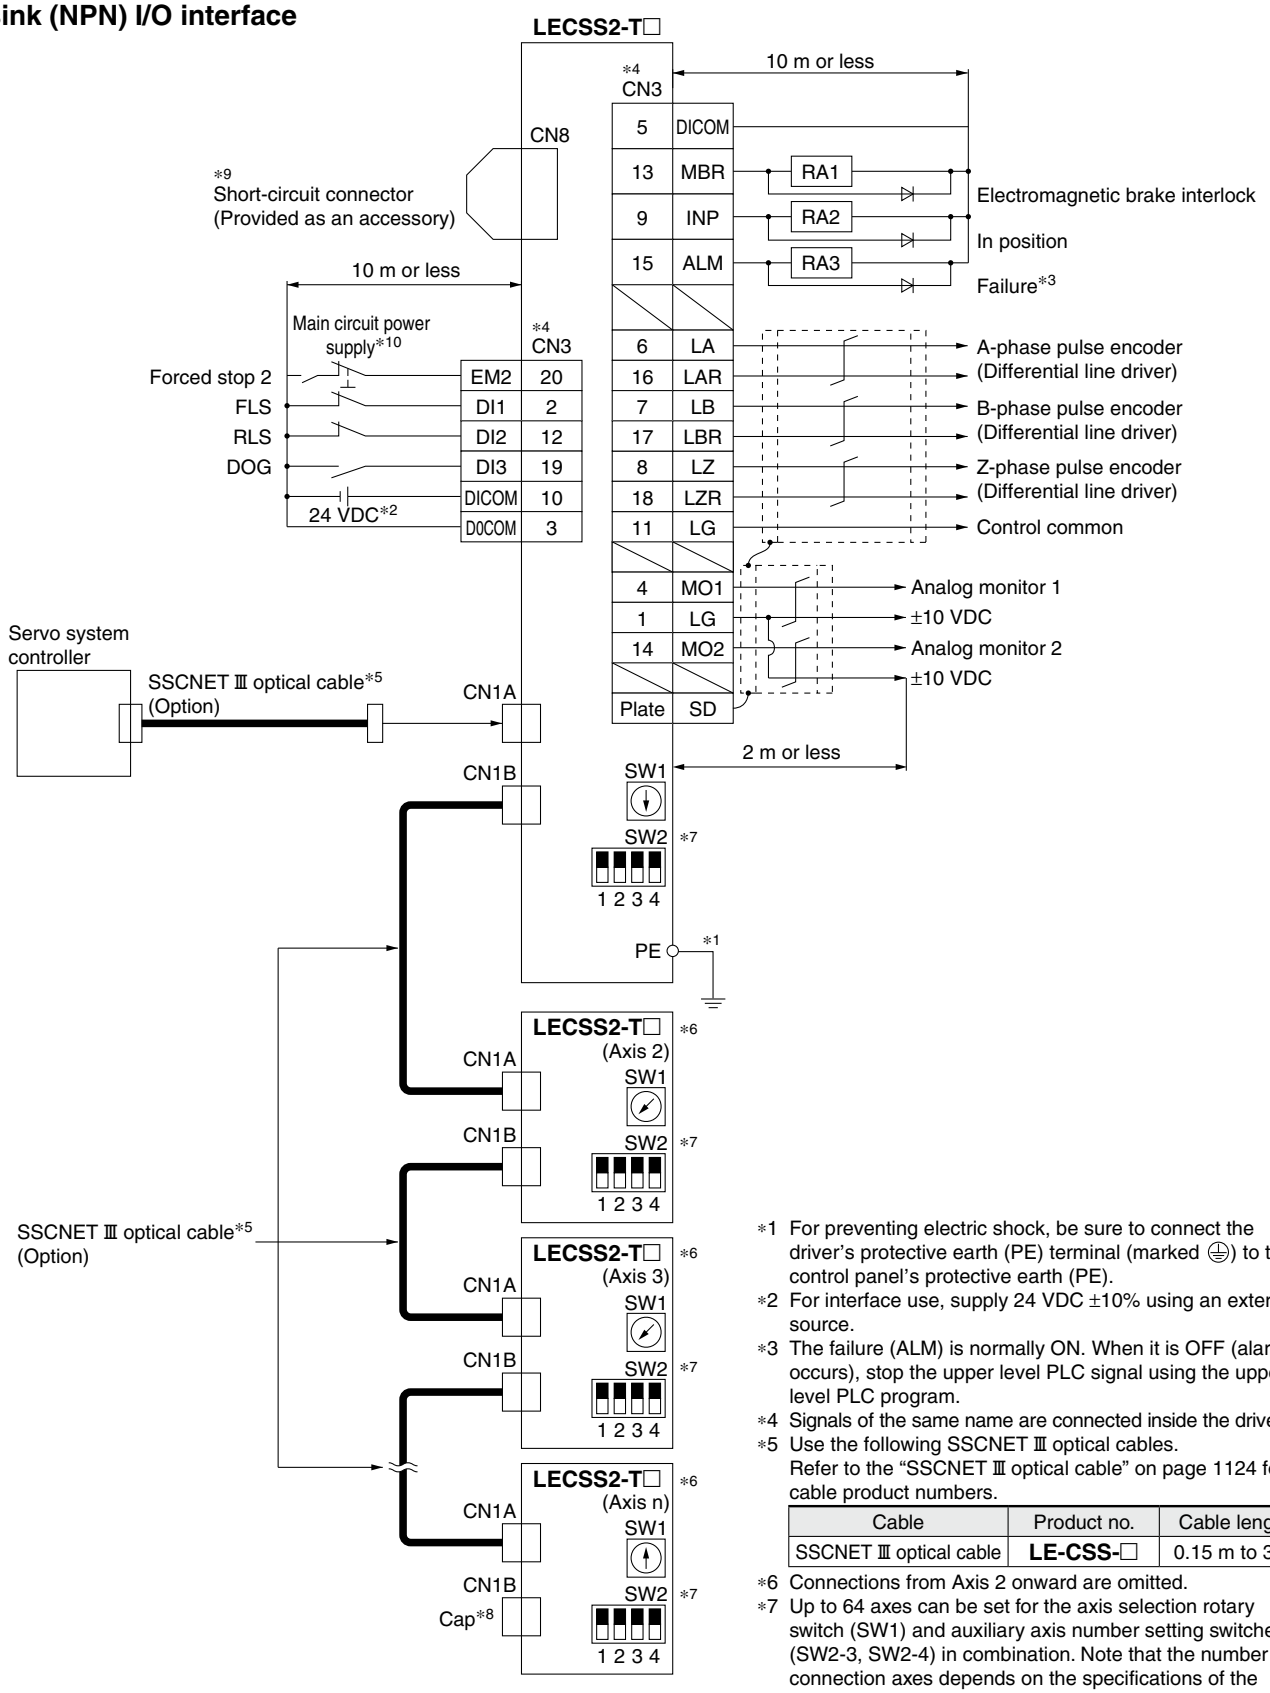
Control Signal Wiring Example: LECSN2-T□



*1 For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).
*2 If upper level equipment does not have forced stop function, always install the forced stop 2 switch (normally closed contact).
*3 Configure a circuit to turn off EM2 when the main circuit power is turned off to prevent any unexpected restarts of the driver.
*4 When not using the STO function, use the driver with the short-circuit connector (provided as an accessory) inserted.
*5 For interface use, supply 24 VDC ±10% using an external source. Set the total current capacity to 300 mA. 300 mA is the value when all I/O command signals are being used. In addition, reducing the number of inputs/outputs can decrease the current capacity.
*6 The ALM (Failure) is normally ON. (Normally closed contact)
*7 Signals of the same name are connected inside the driver.

Control Signal Wiring Example: LECSS2-T□

For sink (NPN) I/O interface



∗1 For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked ⏚) to the control panel's protective earth (PE).

∗2 For interface use, supply 24 VDC ±10% using an external source.

∗3 The failure (ALM) is normally ON. When it is OFF (alarm occurs), stop the upper level PLC signal using the upper level PLC program.

∗4 Signals of the same name are connected inside the driver.

∗5 Use the following SSCNET Ⅲ optical cables.
Refer to the "SSCNET Ⅲ optical cable" on page 1124 for cable product numbers.

Cable	Product no.	Cable length
SSCNET Ⅲ optical cable	**LE-CSS-□**	0.15 m to 3 m

∗6 Connections from Axis 2 onward are omitted.

∗7 Up to 64 axes can be set for the axis selection rotary switch (SW1) and auxiliary axis number setting switches (SW2-3, SW2-4) in combination. Note that the number of connection axes depends on the specifications of the upper level PLC.

∗8 Be sure to place a cap on unused CN1A/CN1B.

∗9 When not using the STO function, use the driver with the short-circuit connector (provided as an accessory) inserted.

∗10 Configure a circuit to turn off EM2 when the main circuit power is turned off to prevent any unexpected restarts of the driver.

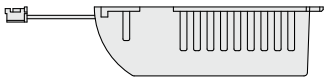
Battery

Replacement batteries must be purchased from Mitsubishi Electric Corporation.

Part no.: MR-J3BAT
manufactured by Mitsubishi Electric Corporation

Battery for replacement
Absolute position data is maintained by installing the battery to the driver.



Weight: 30 g

∗ The MR-J3BAT is a single battery that uses a lithium metal battery ER6V.
When transporting lithium metal batteries and devices with built-in lithium metal batteries by a method subject to UN regulations, it is necessary to apply measures according to the regulations stipulated in the United Nations Recommendations on the Transport of Dangerous Goods, the Technical Instructions (ICAO-TI) of the International Civil Aviation Organization (ICAO), and the International Maritime Dangerous Goods Code (IMDG CODE) of the International Maritime Organization (IMO). If a customer is to transport such products, it is necessary for them to confirm the latest regulations, or the laws and regulations of the country of transport, on their own in order to apply the proper measures.

Part no.: MR-BAT6V1SET

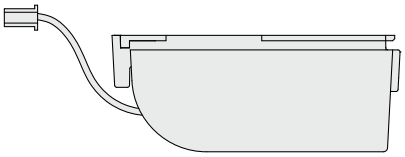
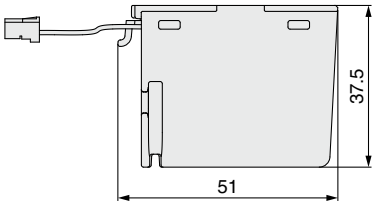
Battery for replacement
Absolute position data is maintained by installing the battery to the driver.



Weight: 60 g

Part no.: MR-BAT6V1SET-A
manufactured by Mitsubishi Electric Corporation

Battery for replacement
Absolute position data is maintained by installing the battery to the driver.



Weight: 60 g

∗ The MR-BAT6V1SET and MR-BAT6V1SET-A are assembled batteries that use lithium metal battery 2CR17335A.
When transporting lithium metal batteries and devices with built-in lithium metal batteries by a method subject to UN regulations, it is necessary to apply measures according to the regulations stipulated in the United Nations Recommendations on the Transport of Dangerous Goods, the Technical Instructions (ICAO-TI) of the International Civil Aviation Organization (ICAO), and the International Maritime Dangerous Goods Code (IMDG CODE) of the International Maritime Organization (IMO). *1 ⫽ shows twisted-pair wires.
*2 The 24 VDC power supply is not included. Use a 24 VDC power supply with double insulation or reinforced insulation.
*3 When using the safety function, a safety function device must be connected to the wiring that is necessary to activate the safety function. Otherwise, the servo motor is not turned ON. When not using the safety function, use the driver with the Safety Jumper Connector (provided as an accessory) inserted into the CN8.
*4 Always use line receivers to receive the output signals.
** The functions allocated to the input signals /DEC, P-OT, N-OT, /EXT1, /EXT2, and /EXT3, and the output signals /SO1, /SO2, and /SO3 can be changed by setting the parameters.
*5 It is a safety function equivalent to the STO function (IEC 61800-5-2) using the hard wire base block function (HWBB).

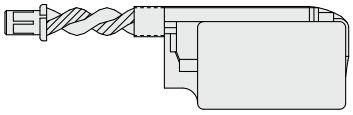
∗7 WindowsUpdate KB2919442, KB2919355, and KB2999226 are required.
∗8 WindowsUpdate KB2999226 is required.

Battery (LECYM/LECYU common)

Replacement batteries must be purchased from YASKAWA Electric Corporation.

Part no.: JZSP-BA01
manufactured by YASKAWA Electric Corporation

Battery for replacement
Absolute position data is maintained by installing the battery to the battery case of the encoder cable.



Weight: 10 g

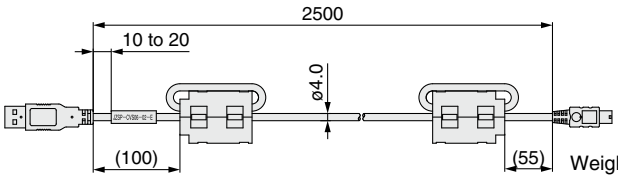
∗ The JZSP-BA01 is a single battery that uses a lithium metal battery ER3V.
When transporting lithium metal batteries and devices with built-in lithium metal batteries by a method subject to UN regulations, it is necessary to apply measures according to the regulations stipulated in the United Nations Recommendations on the Transport of Dangerous Goods, the Technical Instructions (ICAO-TI) of the International Civil Aviation Organization (ICAO), and the International Maritime Dangerous Goods Code (IMDG CODE) of the International Maritime Organization (IMO). If a customer is to transport such products, it is necessary for them to confirm the latest regulations, or the laws and regulations of the country of transport, on their own in order to apply the proper measures.

USB cable (2.5 m)

LEC−JZ−CVUSB

∗ JZSP-CVS06-02-E manufactured by YASKAWA CONTROLS CO., LTD.

Cable for connecting the PC and driver when using the setup software (SigmaWin+™)
Do not use any cable other than this cable.



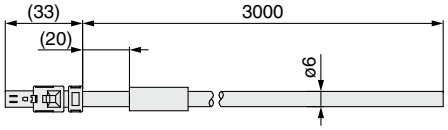
Weight: 150 g

Cable for safety function device (3 m)

LEC−JZ−CVSAF

∗ JZSP-CVH03-03-E manufactured by YASKAWA CONTROLS CO., LTD.

Cable for connecting the driver and device when using the safety function
Do not use any cable other than this cable.



Weight: 160 g

LECSA/LECS□-T/LECY□ Series
Specific Product Precautions 1

Be sure to read this before handling the products.
Refer to page 1351 for safety instructions and pages 1352 to 1357 for electric actuator precautions.

Design / Selection

⚠Warning

1. Be sure to apply the specified voltage.
Otherwise, malfunction or breakage may occur. If the applied voltage is lower than the specified voltage, it is possible that the load will not be able to be moved due to an internal voltage drop of the driver. Please check the operating voltage before use.

2. Do not operate the product beyond the specifications.
Otherwise, a fire, malfunction, or actuator damage may result. Please check the specifications before use.

3. Install an emergency stop circuit.
Please install an emergency stop outside of the enclosure so that the system operation can be stopped immediately and the power supply can be intercepted.

4. In order to prevent any damage caused by the breakdown or malfunction of the driver and its peripheral devices, a backup system should be established in advance by giving a multiple-layered structure or a fail-safe design to the equipment, etc.

5. If the danger of human injury is expected due to abnormal heat generation, smoking, ignition, etc., of the driver and its peripheral devices, cut off the power supply of the product and the system immediately.

6. The parameters of the driver are set to initial values. Please change the parameters according to the specifications of the customer's equipment before use. Refer to the operation manual for parameter details.

Handling

⚠Warning

1. Do not touch the inside of the driver and its peripheral devices.
Doing so may cause an electric shock or damage to the driver.

2. Do not perform the operation or setting of the product with wet hands.
Doing so may cause an electric shock.

3. Products with damage or those missing any components should not be used.
An electric shock, fire, or injury may result.

4. Use only the specified combination between the electric actuator and the driver.
Failure to do so may cause damage to the actuator or the driver.

5. Be careful not to be hit by workpieces while the actuator is moving.
It may cause an injury.

6. Do not connect the power supply or power on the product before confirming the area to which the workpiece moves is safe.
The movement of the workpiece may cause an accident.

7. Do not touch the product when it is energized and for some time after the power has been disconnected, as it is very hot.
Doing so may lead to a burn due to the high temperature.

8. Before installation, wiring, and maintenance, the voltage should be checked with a tester 5 minutes after the power supply has been turned off.
Otherwise, an electric shock, fire, or injury may result.

Handling

⚠Warning

9. Static electricity may cause a malfunction or break the driver. Do not touch the driver while power is supplied.
When touching the driver for maintenance, take sufficient measures to eliminate static electricity.

10. Do not use the product in an area where dust, powder dust, water, chemicals, or oil is in the air.
It will cause failure or malfunction.

11. Do not use the product in an area where a magnetic field is generated.
It will cause failure or malfunction.

12. Do not install the product in an environment containing flammable gas, explosive gas, or corrosive gas.
It could lead to fire, explosion, or corrosion.

13. Radiant heat from strong heat sources, such as a furnace, direct sunlight, etc., should not be applied to the product.
It will cause failure of the driver or its peripheral devices.

14. Do not use the product in an environment subject to a temperature cycle.
It will cause failure of the driver or its peripheral devices.

15. Do not use the product in a place where surges are generated.
When there are units that generate a large amount of surge around the product (e.g. solenoid type lifters, high-frequency induction furnaces, motors, etc.), this may cause deterioration or damage to the product's internal circuit. Avoid sources of surge generation and crossed lines.

16. Do not install the product in an environment under the effect of vibrations and impacts.
It will cause failure or malfunction.

17. When a surge-generating load, such as a relay or solenoid valve, is driven directly, use a product that incorporates a surge absorption element.

Installation

⚠Warning

1. Install the driver and its peripheral devices on a fireproof material.
Direct installation on or near a flammable material may cause a fire.

2. Do not install the product in a place subject to vibrations and impacts.
It will cause failure or malfunction.

3. The driver should be mounted on a vertical wall in a vertical direction. Also, be sure not to cover the driver's suction/exhaust ports.

4. Install the driver and its peripheral devices on a flat surface.
If the mounting surface is distorted or uneven, an unacceptable force may be added to the housing, etc., causing problems.

Specific Product Precautions 2

Be sure to read this before handling the products.
Refer to page 1351 for safety instructions and pages 1352 to 1357 for electric actuator precautions.

Power Supply

⚠Caution

1. Use a power supply that has low noise between lines and between the power and ground.
In cases where noise is high, an isolation transformer should be used.

2. To prevent lightning surges, appropriate measures should be taken. Ground the surge absorber for lightning separately from the grounding of the driver and its peripheral devices.

Wiring

⚠Warning

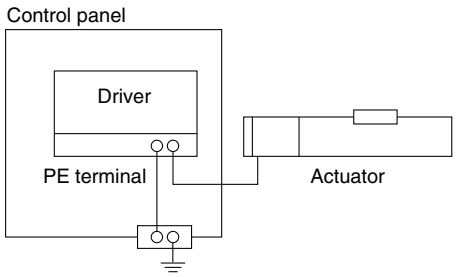
1. The driver will be damaged if a commercial power supply (100/200 V) is added to the driver's servo motor power (U, V, and W). Be sure to check wiring for mistakes when the power supply is turned on.

2. Connect the ends of the U, V, and W wires of the motor cable correctly to the phases (U, V, and W) of the servo motor power. If these wires do not match up, the servo motor cannot be controlled.

Grounding

⚠Warning

1. For grounding the actuator, connect the copper wire of the actuator to the driver's protective earth (PE) terminal and connect the copper wire of the driver to the earth via the control panel's protective earth (PE) terminal.
Do not connect them directly to the control panel's protective earth (PE) terminal.



2. In the unlikely event that a malfunction is caused by the ground, please disconnect it.

Maintenance

⚠Warning

1. Perform a maintenance and inspection periodically.
Confirm wiring and screws are not loose.
Loose screws or wires may cause unintentional malfunction.

2. Conduct an appropriate functional inspection after completing the maintenance and inspection.
At times where the equipment or machinery does not operate properly, conduct an emergency stop of the system. Otherwise, an unexpected malfunction may occur and it will become impossible to ensure safety. Conduct a test of the emergency stop in order to confirm the safety of the equipment.

3. Do not disassemble, modify, or repair the driver and its peripheral devices.

4. Do not put anything conductive or flammable inside the driver.
It may cause a fire.

5. Do not conduct an insulation resistance test or withstand voltage test on this product.

6. Ensure sufficient space for maintenance activities.
Design the system allowing the required space for maintenance and inspection.
