

Particle Generation Characteristics

11-LEJS Series ▶ p. 657

Particle Generation Measuring Method

The particle generation data for the 11-LEJS series are measured in the following test method.

Test Method (Example)

Operate the specimen that is placed in an ISO Class 5 equivalent clean bench, and measure the changes of the particle concentration over time until the number of cycles reaches the specified point.

Measuring Conditions

Measuring instrument	Description	Laser dust monitor (Automatic particle counter using the light scattering method)
	Minimum measurable particle diameter	0.1 μm
	Suction flow rate	28.3 L/min (ANR)
Setting conditions	Sampling time	5 min
	Interval time	55 min
	Sampling air flow	141.5 L (ANR)

Test Conditions

Size	Speed [mm/s]	Model	Workpiece mass [kg]	Acceleration [mm/s ²]	Duty ratio [%]
40	1200	11-LEJS40□A-200	4	13000	100
	600	11-LEJS40□B-200		10000	
63	1200	11-LEJS63□A-300		13000	
	600	11-LEJS63□B-300		10000	

* Mounting position: Horizontal

Evaluation Method

To obtain the measured values of particle concentration, the accumulated value*¹ of particles captured every 5 minutes, by the laser dust monitor, is converted into the particle concentration in every 1 m³.

When determining particle generation grades, the 95% upper confidence limit of the average particle concentration (average value), when each specimen is operated at a specified number of cycles*² is considered.

The plots in the graphs indicate the 95% upper confidence limit of the average particle concentration of particles with a diameter within the horizontal axis range.

*¹ Sampling air flow rate: Number of particles contained in 141.5 L (ANR) of air

*² Actuator: 1 million cycles

* The particle generation characteristics (page 656) provide a guide for selection but is not guaranteed.

Electric Actuator/High Rigidity Slider Type Ball Screw Drive

Clean Room Specification

11-LEJS Series LEJS40, 63

The LECSB-S, LECS-S, and LECS-S electric actuator drivers are to be discontinued. The LECSB-T, LECS-T, and LECS-T drivers are available as substitutes. In the product number, select T6 instead of S6, or T7 instead of S7 for the **③ Motor type**, and select B2 instead of B1, C2 instead of C1, or S2 instead of S1 for the **⑩ Driver type**.

Refer to page 175 for model selection and page 655 for particle generation characteristics.

LECY □ Series ▶ p. 659

How to Order

Clean series ●

11	Vacuum type
----	-------------

① Accuracy

Nil	Basic type
H	High-precision type

② Size

40
63

④ Lead [mm]

Symbol	LEJS40	LEJS63
A	16	20
B	8	10

⑤ Stroke [mm]*3

200
to
1500

*3 Refer to the applicable stroke table for details.

⑥ Motor option

Nil	Without option
B	With lock

⑦ Vacuum port*5

Nil	Left
R	Right
D	Both left and right

*5 Select "D" for the vacuum port for suction of 50 L/min (ANR) or more.

③ Motor type

Symbol	Type	Output [W]	Actuator size	Compatible drivers	UL-compliant
S2*1	AC servo motor (Incremental encoder)	100	40	LECSA□-S1	●
S3	AC servo motor (Incremental encoder)	200	63	LECSA□-S3	●
S6*1	AC servo motor (Absolute encoder)	100	40	LECSB□-S5 LECS□-S5 LECSS□-S5	—

*1 Please consult with SMC for non-standard strokes as they are produced as special orders.

*2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 176.

*3 The allowable speed changes according to the stroke.

*4 A reference value for correcting an error in reciprocal operation

*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*6 The amount of particle generation changes according to the operating conditions and suction flow rate. Refer to the particle generation characteristics for details.

*7 Indicates the max. power during operation (including the driver)

When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

*8 Only when motor option "With lock" is selected

*9 The resolution will change depending on the driver type.

* Sensor magnet position is located in the table center.

For detailed dimensions, refer to the "Auto Switch Mounting Position" on page 210.

* Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.

* For the manufacture of intermediate strokes, please contact SMC.

Dimensions: Ball Screw Drive

11-LEJS63

**Motor option B:
With lock**

- *1 When mounting the actuator using the body mounting reference plane, use a pin. Set the height of the pin to be 5 mm or more because of round chamfering. (Recommended height 6 mm)
- *2 This drawing shows the left type.
- * Please consult with SMC for adjusting the Z-phase detecting position at the stroke end of the end side.
- * The amount of particle generation changes according to the operating conditions and suction flow rate.
