- *1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. ···(Applicable to ø20 only.) Consult with SMC regarding water resistant types with the above model numbers.
- *2 1 m type lead wire is only applicable to D-A93

mounting brackets mounted already).

- * Lead wire length symbols: 0.5 m Nil (Example) M9NW
 - 1 m ····· M (Example) M9NWM
 - 3 m L (Example) M9NWL
 - 5 m Z (Example) M9NWZ None N (Example) H7CN
- * Solid state auto switches marked "O" are produced upon receipt of order
- * You do not need to specify "N" (i.e., without lead wire) for D-A3 , D-A44, D-G39, and D-K39.
- This is the only standard specification automatically available for these models * D-A9 V, M9 V, M9 WV, and M9 A(V) models cannot be mounted on ø25 to ø40.
- * Since there are applicable auto switches other than listed, refer to page 310 for details. * For details about auto switches with pre-wired connector, refer to pages 474 and 475.
- * D-A9□, M9□, and M9□W type auto switches are shipped with the hydraulic cylinder (but not assembled). (However, they are auto switch mounting brackets are shipped with the

Specifications

Bore size (mm)	20	25	32	40	
Action		Double acting/Single rod			
Fluid		Hydrau	ılic fluid		
Nominal pressure		7 N	/IPa		
Proof pressure	10.5 MPa				
Maximum allowable pressure		9 N	/IPa		
Minimum operating pressure	0.3 MPa				
Ambient and fluid temperature	Without auto switch: -10° to 80°C				
Ambient and huld temperature	With auto switch: -10° to 60°C				
Piston speed	8 to 300 mm/s				
Cushion		Cushio	on seal		
0		to 250 mm	+1.0		
Stroke length tolerance	251 to 800 mm ^{+1.4} ₀				
	Basic type, Axial foot type				
Mounting type	Head flange type, Rod flange type				
	Single clevis type				

Note) Refer to page 214 for definitions of terms related to pressure.

Accessories

Sta	Rod end nut	•	•	•	•	•

Option

I-type single knuckle joint Y-type double knuckle joint Bracket for clevis type Knuckle pin Bracket pin	Refer to page 307
---	-------------------

Hydraulic Fluid Compatibility

Hydraulic fluid	Compatibility
Standard mineral hydraulic fluid	Compatible
W/O hydraulic fluids	Compatible
O/W hydraulic fluids	Compatible
Water/Glycol hydraulic fluids	*
Phosphate hydraulic fluids	Not compatible

^{*} Consult with SMC.

$\textbf{Standard Strokes:} \ \ \textit{Refer to page 309 for minimum strokes for auto switch mounting}.$

Bore size (mm) Standard strokes (mm)		Long stroke	
20	25 to 300		
25	25 to 400	800	
32	25 to 500	800	
40	25 10 500		

^{*} Standard strokes above have a minimal delivery time.

Consult with SMC for the manufacture of strokes other than the above.

Mounting Brackets: Part Nos.

Bore size (mm)	20	25	32	40
Axial foot *	CHN-L020	CHN-L025	CHN-L032	CHN-L040
Flange	CHN-F020	CHN-F025	CHN-F032	CHN-F040

^{*} When ordering the axial foot type, order 2 pieces for each cylinder.

Theoretical Output

							Unit: N	
Bore size	Rod size	Operating	Piston area	Operating pressure (MPa)				
(mm)	(mm)	direction	(mm ²)	1	3	5	7	
20	10	OUT	314	314	942	1570	2198	
20	10	IN	235	235	705	1175	1645	
25	12	OUT	490	490	1470	2450	3430	
25		IN	377	377	1131	1885	2639	
32	40	OUT	804	804	2412	4020	5628	
32	16	IN	603	603	1809	3015	4221	
40	10	OUT	1256	1256	3768	6280	8792	
40	18	IN	1002	1002	3006	5010	7014	

Theoretical output (N) = Pressure (MPa) x Piston area (mm²)

Weight

					Unit: kg
	Bore size (mm)	20	25	32	40
Basic Weight	Basic type	0.27	0.37	0.53	1.05
	Axial foot type	0.51	0.63	0.91	1.59
	Flange type	0.36	0.54	0.72	1.26
	Clevis type	0.25	0.45	0.67	1.00
Add	itional weight per 50 mm	0.12	0.13	0.18	0.23

Calculation method
(Example) CHNL20-100
(Foot type, ø20, 100 mm stroke)
Basic weight 0.51 kg
Additional weight ... 0.12/50 mm
Cylinder stroke 100 mm
0.51 + 0.12/50 x 100 = 0.75 kg

⚠ Specific Product Precautions

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 214 to 221 for Hydraulic Cylinder and Auto Switch Precautions.

⚠ Caution

When operating a cylinder for the first time, make sure to release the air at low pressure. When the air release is complete, operate the cylinder at reduced pressure, gradually increasing it to the normal operating pressure. However, the piston speed at this time should be adjusted to the minimum speed.

Mounting

 When mounting with bracket mounting nuts, tighten them using the tightening torques in the table below as a quide.

Bore size (mm)	Mounting nut thread	Mounting nut width across flats (mm)	Tightening torque (N·m)	
20	M22 x 1.5	26	45	
25	M24 x 1.5	32	60	
32	M30 x 1.5	38	85	
40	M33 x 1.5	41	110	

2. When mounted with one side attached and one side unattached (basic type and flange type) and operating at high speed, bending moment acts on the cylinder due to oscillation at the stroke end, which may cause cylinder damage. In this case, install brackets to suppress the oscillation of the cylinder body, or reduce the piston speed enough so that the cylinder body does not oscillate at the stroke end.

Note 1) Since the switch bracket (made from nylon) are affected in an environment where alcohol, chloroform, methylamines, hydrochloric acid or sulfuric acid is splashed over, so it cannot be used. Please consult SMC regarding other chemicals.

[Stainless steel mounting screw kits]

The following stainless steel mounting screw kits are available for use depending on the operating environment. (Switch mounting bands are not included and should be ordered separately.)

BBA3: D-G5, K5, B5, B6

BBA4: D-C7, C8, H7

Note) Refer to the table below for details on BBA3, BBA4.

The above stainless steel screws are used when a cylinder is shipped with the D-H7BA or G5BA auto switches.

When only an auto switch is shipped independently, the BBA3 or BBA4 is attached

Besides the models listed in "How to Order," the following auto switches are applicable. Refer to pages 431 to 490 for detailed auto switch specifications.

Auto switch type	Part no.	Electrical entry	Features	
Solid state	D-H7A1, H7A2, H7B		_	
	D-G59, G5P, K59			
	D-H7NW, H7PW, H7BW		D	
	D-G59W, G5PW, K59W	Grommet (in-line)	Diagnostic indication (2-color indicator)	
	D-G5BA, H7BA		Water resistant (2-color indicator	
	D-G5NT		With timer	
	D-G59F		With diagnostic output (2-color indicator	
Reed	D-C73, C76, B53	O	_	
	D-C80	Grommet (in-line)	Without indicator light	

^{*} Solid state auto switches are also available with pre-wired connector. Refer to pages 474 and 475 for details.

* Normally closed (N.C. = b contact), solid state auto switches (D-F9G, F9H) are also available. For details, refer to page 443.

ı

Note 2) When mounting a D-M9□A(V) type auto switch, if the switch bracket is mounted on the indicator light, it may damage the auto switch. Therefore, be sure to avoid mounting the switch bracket on the indicator light.

Note 3) D-A9□V, M9□VV, M9□WV, and M9□A(V) models cannot be mounted on ø25 to ø40.

How to Mount and Move the Auto Switch

- 1. Tighten the screw under the specified torque when mounting auto
- 2. Set the auto switch mounting band perpendicularly to cylinder tube.

<Applicable auto switch>

Solid state D-M9N, M9P, M9B, M9NV, M9PV, M9BV

D-M9NW, M9PW, M9BW, M9NWV, M9PWV, M9BWV D-M9NA, M9PA, M9BA, M9NAV, M9PAV, M9BAV

Reed......D-A90, A93, A96, A90V, A93V, A96V

How to Mount and Move the Auto Switch

Mounting the Auto Switch (When the bore size is 20 mm)

- 1. Wrap the auto switch mounting band around the cylinder where the auto switch will be mounted without bending the reinforcing plates.
- 2. Connect the switch holder and switch bracket, and place them between the two ends of the auto switch mounting band (1).
- 3. Hook the bent part of the auto switch mounting band reinforcing plates onto the upper surface of the switch bracket. Bend the base of the auto switch mounting band reinforcing plates until the through holes of the switch bracket, the through holes of the auto switch mounting band, and the holes of the M3 female thread are aligned. Adjust the switch bracket so that both ends of the auto switch mounting band are inserted into the inner walls on both side surfaces of the switch bracket.

For the D-M9 A (V) type auto switch, do not install the switch bracket on the indicator light.

- 4. Pass the auto switch mounting screw (M3) supplied with the auto switch mounting band from the through-hole side of the auto switch mounting band and engage it with the M3 female thread of the auto switch mounting band through the through-hole in the switch bracket.
- 5. Tighten the auto switch mounting screw with the specified tightening torque (0.6 to 0.7 N·m)
- 6. Insert the auto switch into the auto switch mounting groove of the switch holder (2) 7. After checking the detection position, tighten the set screw (M2.5) supplied with the auto switch to secure the auto switch
- Mounting the Auto Switch (When the bore size is 25 mm or more) 1. Attach the switch bracket to the switch holder. Align the convex part
- of the switch bracket with the concave part of the switch holder. 2. Mount the switch holder (1) between the auto switch mounting
- band (2) reinforcing plates. 3. Mount the switch holder (1) between the auto switch mounting band (2) reinforcing plates.
- Insert the auto switch mounting screw through the holes in both reinforcing plates, and temporarily tighten the screw.
- 5. Remove the set screw from the auto switch.
- 6. Fit the switch spacer into the auto switch.
- 7. Insert the auto switch (6) into the switch holder from the back, and set it in place.
- 8. Tighten the auto switch mounting screw with the specified tightening torque (0.8 to 1.0 N·m).

Removing the Auto Switch (When the bore size is 25 mm or more)

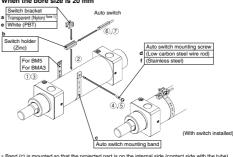

- 1. Loosen the auto switch mounting screw, and remove it.
- 2. Remove the switch bracket from the switch holder.
- 3. Open the top of the switch holder, and remove the auto switch and spacer together from above.
- 4. Remove the switch spacer from the auto switch.

Tightening torque for the set screw (M2.5) supplied with the auto switch (N·m)

Auto switch model	Tightening torque
D-M9□(V)	
D-M9□W(V)	0.05 to 0.15
D-M9□A(V)	
D-A9□(V)	0.1 to 0.2

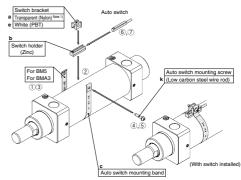

When tightening the set screw supplied with the auto switch, use a watchmaker's screw driver with a handle diameter of 5 to 6 mm.

When the hore size is 20 mm

* Band (c) is mounted so that the projected part is on the internal side (contact side with the tube).

When the bore size is 25 mm or more

Figure 1. Switch insert angle

Adjustment the Auto Switch Position

- 1. To make the fine adjustment, loosen the set screw (M2.5) supplied with the auto switch and slide the auto switch inside the auto switch mouthing groove to adjust the position.
- 2. To move the auto switch setting position largely, loosen the screw (M3) that secures the auto switch mounting band and slide the auto switch together with the switch holder on the cylinder tube to adjust the position.

Note) When removing the screw connection part with the auto switch mounting screw after the auto switch mounting band has been assembled, be careful not to drop the switch bracket, switch holder, auto switch mounting screw, or auto switch mounting band.

How to Mount and Move the Auto Switch

⚠ Caution

- Tighten the screw under the specified torque when mounting auto switch.
- 2. Set the auto switch mounting band perpendicularly to cylinder tube.

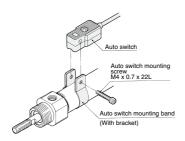

Mounting correctly

Mounting incorrectly

<Applicable auto switch>

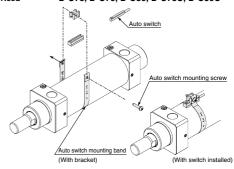

Solid state D-G59, D-G5P, D-K59, D-G5BA D-G59W, D-G5PW, D-K59W D-G59F, D-G5NT, D-G5NB Reed D-B53, D-B54, D-B64, D-B59W

- Put an auto switch mounting band on the cylinder tube and set it at the auto switch mounting position.
- Put the mounting section of the auto switch between the auto switch mounting band mounting holes, then adjust the position of mounting holes of switch to those of mounting band.
- Lightly thread the auto switch mounting screw through the mounting hole into the thread part of band fitting.
- 4. After reconfirming the detection position, tighten the auto switch mounting screw to secure the auto switch while properly contacting the auto switch bottom part and the cylinder tube.
- (The tightening torque of M4 screw should be about 1 to 1.2 N·m.)
- Modification of the detection position should be made in the condition of 3.

<Applicable auto switch>

Solid state D-H7A1, D-H7A2, D-H7B, D-H7BA D-H7C, D-H7NF, D-H7NW, D-H7PW D-H7BW Reed D-C73. D-C76. D-C80. D-C73C. D-C80C

- * Band (c) is mounted so that the projected part is on the internal side (contact side with the tube).
- Wrap the auto switch mounting band around the cylinder where the auto switch will be mounted without bending the reinforcing plates.
- 2. Hook the bent part of the auto switch mounting band reinforcing plates onto the upper surface of the switch. Bend the base of the auto switch mounting band reinforcing plates until the through holes of the switch bracket, the through holes of the auto switch mounting band, and the holes of the M3 female thread are aligned. Adjust the switch bracket so that both ends of the auto switch mounting band are inserted into the inner walls on both side surfaces of the switch bracket.
- Lightly thread the auto switch mounting screw through the mounting hole into the thread part of the auto switch mounting band fitting.
- 4. After setting the whole body to the detecting position by sliding, tighten the auto switch mounting screw to secure the auto switch while properly contacting the auto switch bottom part and the cylinder tube. (Tightening torque of M3 screw should be 0.8 to 1 N-m.)
- Modification of the detection position should be made in the condition of 3.

How to Mount and Move the Auto Switch

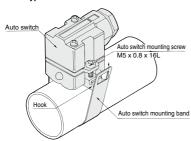

⚠ Caution

- Tighten the screw under the specified torque when mounting auto switch.
- 2. Set the auto switch mounting band perpendicularly to cylinder tube.

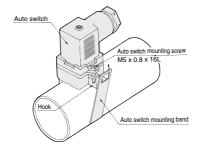

<Applicable auto switch> Solid state D-G39, D-K39 Reed D-A33, D-A34, D-A44

How to Mount and Move the Auto Switch D-A3, D-G3/K3 type

D-A4

- Loosen the auto switch mounting screws at both sides to pull down the hook.
- Put an auto switch mounting band on the cylinder tube and set it at the auto switch mounting position, and then hook the band.
- 3. Screw lightly the auto switch mounting screw.
- 4. Set the whole body to the detecting position by sliding, tighten the mounting screw to secure the auto switch. (The tightening torque should be about 2 to 3 N·m.)
- Modification of the detecting position should be made in the condition of 3.
