

5.0 MPa Pilot Operated 2/3 Port Solenoid Valve & Check Valve

VCH Series

VCH41/42: 2 Port VCH410: 3 Port VCHC40: Check Valve

Pilot Operated 2 Port Solenoid Valve

VCH40 Series

Stable responsiveness

Response time dispersion within ± 2 ms

Service life: 10 million cycles

Non-collision construction between the iron cores keeps equipment abrasion free.

Improved responsiveness when switching off.
Reduced dispersion construction

Improved durability by applying a **special surface treatment** to the sliding parts.

Unnecessary volume inside the pilot chamber is reduced.

High speed response
Reduced dispersion

Use of **shock absorbing rubber**, resulting in protection of the pilot valve and electric parts.

Improved durability under a high pressure environment with a **polyurethane elastomer** poppet

Check Valve

VCHC40 Series

Using **NSF-H1-certified grease** on the guide ring (sliding part).

Improved durability under a high pressure environment with a **polyurethane elastomer** poppet

22.0 MPa 2 Port Air Operated Valve

* In the symbol Port 1 and Port 2 are shown in a blocked condition, but it is not possible to use the valve in cases of reverse pressure, where the Port 2 pressure is higher than the Port 1 pressure.

Specifications

	Model	VCH41 (N.C.)	VCH42 (N.O.)
Valve specification	Valve construction	Pilot operated, diaphragm poppet	
	Fluid	Air	
	Orifice	ø16	ø17.5
	C value (Effective area)	17 dm ² /(s·bar) (85 mm ²)	22 dm ² /(s·bar) (110 mm ²)
	b	0.08	0.11
	Cv	4.5	5.8
	Max. operating pressure	5.0 MPa	
	Operating pressure differential	0.5 to 5.0 MPa	
	Fluid temperature	5 to 80°C	
	Ambient temperature	5 to 80°C	
	Body material	Brass	
	Main seal material	Polyurethane elastomer	
	Enclosure	Water-jet-proof (Equivalent to IP65)	
Coil specification	Port size	G3/4, 1 (Conforming to ISO1179-1 on the pneumatic/hydraulic G thread)	
	Impact/vibration resistance	300/100 m/s ² (Note 3)	
	Mounting orientation	Unrestricted	
	Weight	1.67 kg	1.9 kg
	Rated voltage	12 VDC, 24 VDC, 100 VAC, 110 VAC, 200 VAC, 220 VAC (50/60 Hz)	
	Allowable voltage fluctuation	±10% of rated voltage	
	Electrical entry	DIN connector	
	Coil insulation type	Class B	
Power consumption	5 W (DC), 13 VA (AC)		

Note 1) * Be aware that even if the pressure differential is above the minimum operating pressure differential when the valve is closed, the pressure differential may fall below the minimum operating pressure differential when the valve opens, depending on the power of the supply source (pumps, compressors, etc.) or the type of pipe restrictions.
* Refer to the Selection 5 in the Precautions 1 on page 441.

Note 2) Impact resistance: No malfunction resulted in an impact test using a drop impact tester. The test was performed one time each in the axial and right angle directions of the main valve and armature, for both energized and de-energized states. (Value in the initial stage)

Response Time

Note 1) DC solenoid

Note 2) AC solenoid: It will cause delays around 20 to 30 msec in the OFF response time.

Note 3) Conforms to JIS B 8419-2010

Vibration resistance: No malfunction resulted in 8.3 to 2000 Hz, a one-sweep test performed in the axial and right angle directions of the main valve and armature for both energized and de-energized states. (Value in the initial stage)

Note 3) Vibration resistance is 50 m/s² when a light/surge voltage suppressor is attached.

Note 4) No inrush voltages are generated in the AC solenoid because a full-wave rectifier is used.

Construction

Normally closed (N.C.)

Normally open (N.O.)

5.0 MPa Pilot Operated 2/3 Port Solenoid Valves & Check Valves Precautions 1

Be sure to read this before handling the products.

Design

Warning

1. Cannot be used as an emergency shutoff valve, etc.

The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. Extended periods of continuous energization

The solenoid coil will generate heat when continuously energized. Avoid using in a tightly shut container. Install it in a well-ventilated area. Furthermore, do not touch it while it is being energized or right after it is energized.

3. This solenoid valve cannot be used for explosion proof applications.

4. Maintenance space

The installation should allow sufficient space for maintenance activities.

5. Actuator drive

When an actuator, such as a cylinder, is to be driven using a valve, take appropriate measures to prevent potential danger caused by actuator operation.

6. Use caution regarding exhaust port freezing.

If a high pressure air (more than 1.0 MPa) is quickly exhausted, there may be an occurrence in which the valve will not switch properly or the service life will substantially decrease due to condensation or freezing caused by the substantial temperature change. When condensation or freezing occurs, take measures such as using a freeze-reducing silencer (VCHNF series), etc.

7. Use caution regarding back pressure.

- 1) When port 3 (EXH) of a 3 port solenoid valve (VCH400 series) is excessively throttled or used as a selector valve (pressurizing 1, 3 port), the pressure in the port should be within a range of half the pressure in port 1 (port 1 pressure \geq twice as strong as port 3 pressure). Using a 3 port valve beyond its back pressure and/or supply pressure range may cause the valve switch to malfunction or result in unstable operation.
- 2) In the case of a 3 port solenoid valve, when the valve is being switched, a high pressure air will be introduced into the lower pressure side. Therefore, when using this product as a selector valve for switching a high and medium pressure, a relief type regulator (VCHR series) must be used for the medium pressure side.

Selection

Warning

1. Confirm the specifications.

Give careful consideration to the operating conditions such as the application, fluid and environment, and use within the operating ranges specified in this catalog.

2. Fluid

Corrosive gas

Cannot be used since it will lead to cracks by stress corrosion or result in other incidents.

3. Air quality

1) Use clean air.

Do not use compressed air which includes chemicals, synthetic oils containing organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.

2) Install air filters.

Install air filters close to valves at their upstream side. A filtration degree of 5 μ m or less should be selected.

3) Install an air dryer or after-cooler, etc.

Compressed air that includes excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an air dryer or after cooler, etc.

4) If excessive carbon powder is generated, eliminate it by installing mist separators at the upstream side of valves.

If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause a malfunction.

Refer to Best Pneumatics No. 6 for further details on compressed air quality.

4. Ambient environment

Use within the operable ambient temperature range. Confirm the compatibility between the product's composition materials and the ambient atmosphere. Be sure that the fluid used does not touch the external surface of the product.

5. Supply source

If the primary side air is throttled, flow may be reduced resulting in the malfunction of the switch or instability in the response time because of the pilot operated solenoid valve. Conduct piping work suited for the secondary side piping (air consumption). Also, when a regulator is installed, the air supply will stop right after the solenoid valve is switched due to the response time of the regulator. Thus, when using it below the minimum operating pressure, adjust the pipe size, length or provide an air tank, etc.

6. The minimum operating pressure is the pressure when the valve begins to open, and not the pressure when the valve is fully open. (For VCHC40)

VCH

VDW

SX10

VQ

LVM

5.0 MPa Pilot Operated 2/3 Port Solenoid Valves & Check Valves Precautions 2

Be sure to read this before handling the products.

Selection

⚠ Caution

1. Leakage voltage

When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less.

Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

AC coil: 10% or less of rated voltage
DC coil: 2% or less of rated voltage

Mounting

⚠ Warning

1. If air leakage increases or equipment does not operate properly, stop operation.

After mounting is completed, confirm that it has been done correctly by performing a suitable function test.

2. Do not apply external force to the coil section.

Be sure to apply the wrench to the external part of the piping connection. (Hexagonal parts or width across flats) Also, use caution when mounting a silencer or piping to the VCH410 series 3 port solenoid valve because the top (G1/4) is a pilot exhaust port.

3. Be sure not to position the coil downwards.

When mounting a valve with its coil positioned downwards, foreign objects in the fluid will adhere to the iron core leading to a malfunction.

4. Avoid sources of vibration, or adjust the arm from the body to the minimum length so that resonance will not occur.

Piping

⚠ Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

Avoid pulling, compressing, or bending the valve body when piping.

2. Winding of sealant tape

Pipe tape is not necessary since this product uses a pneumatic and hydraulic purpose G thread which conforms to ISO 1179-1. When an R (taper) thread is used, leave 1 to 2 threads at the tip exposed before winding the piping thread around it 4 to 5 times.

Connecting a R thread

3. Always tighten threads with the proper tightening torque.

When attaching fittings to valves, tighten with the proper tightening torque shown below.

Tightening Torque for Piping

Connection threads	Proper tightening torque N·m
G, Rc 1/2	28 to 30
G, Rc 3/4	28 to 30
G, Rc 1	36 to 38

4. Connection of piping to products

When connecting piping to a product, refer to its operation manual to avoid mistakes regarding the supply port, etc.

- Port 1: Supply port
- Port 2: Output port
- Port 3: Exhaust port

Note) Supply port when used as a selector valve.

However, use within the range of the port 1 pressure \geq port 3 pressure \times 2 (2 times).

5.0 MPa Pilot Operated 2/3 Port Solenoid Valves & Check Valves Precautions 3

Be sure to read this before handling the products.

Wiring

⚠ Caution

- As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm² for wiring. Furthermore, do not allow excessive force to be applied to the lines.
- Use electrical circuits which do not generate chattering in their contacts.
- Use voltage which is within $\pm 10\%$ of the rated voltage. In cases with a DC power supply where importance is placed on responsiveness, stay within $\pm 5\%$ of the rated value. The voltage drop is the value in the lead wire section connecting the coil.
- When a surge from the solenoid affects the electrical circuitry, install a surge absorber, etc., in parallel with the solenoid.
Or, adopt an option that comes with the surge voltage protection circuit. (However, a surge voltage occurs even if the surge voltage protection circuit is used.)

Electrical Connections

⚠ Caution

DIN connector

Since internal connections are as shown below for the DIN connector, make connections to the power supply accordingly.

Terminal no.	1	2
DIN terminal	+ (-)	- (+)

- * There is no polarity.
- * Use the compatible heavy-duty cords with cable O.D. of $\phi 6$ to 12 mm.
- * Use the tightening torques below for each section.

DIN (EN175301-803) Terminal

This DIN terminal corresponds to the Form A DIN connector with an 18 mm terminal pitch, which complies with EN175301-803B.

Electrical Circuits

⚠ Caution

DIN connector

Operating Environment

⚠ Warning

- Do not use the valves in an atmosphere having corrosive gases, chemicals, salt water, water, steam, or where there is direct contact with any of these.
- Do not use in explosive atmospheres.
- Do not use in locations subject to vibration or impact.
- Do not use in locations where radiated heat will be received from nearby heat sources.
- Employ suitable protective measures in locations where there is contact with water droplets, oil or welding spatter, etc.

Maintenance

⚠ Warning

- Removing the product**
 - Shut off the fluid supply and release the fluid pressure in the system.
 - Shut off the power supply.
 - Dismount the product.
- Low frequency operation**

Switch valves at least once every 30 days to prevent malfunction. Also, in order to use it under the optimum state, conduct a regular inspection once a half year.

⚠ Caution

- Storage**

In the case of long term storage, thoroughly remove all moisture to prevent rust and deterioration of rubber materials, etc.
- Exhaust the drain from an air filter periodically.**
