Digital Flow Switch for Air

PF2A Series

New digital flow switch product, **PF3W series**, with the **compact design and expanded flow rate range** has been launched. Please examine to use **PF3W series** (**page 329**). For details about PF2W series, refer to the catalog at SMC website.

Stan	dards and	regulations			CE, RoHS			
		awitch with unit awitching functio		2 2				

Note 1) For digital flow switch with unit switching function. (Fixed SI unit ([L/min, or L, m² or m³ x 10⁹)) will be set for switch hype without the unit switching function.) Note 2) Flow rate display can be switched between the basic condition of 0°C, 101.3 kPa and the standard condition (ANR) of 20°C, 101.3 kPa, and 65% RH. Note 3) The piping on the IN side must have a straight section of piping whose length is 8 times the piping diameter or more. If a straight section of piping is not installed, the accuracy may vary by ±5% F.S. or more. Note 4) Without lead wire.

Note 5) Accumulated flow rate is reset when the power supply turns OFF. Note 6) Swhich output and accumulated pulse output can be selected during initial setting. Note 7) Window comparator mode — Brine Tysteress Will reach 3 digits, keep P_1 and P_2 or n_1 and n_2 apart by 7 digits or more. (In case of output OUT2, n_1, 2 to be n_3, 4 and P_1, 2 to be P_3, 4.)

Note 8) The flow switch conforms to the CE marking. Note 9) For details about wiring and thread type, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com). Note 10) Any products with tiny scratches, smears, or display color variation or brightness which does not affect the performance are verified as conforming products.

Set Flow Rate Range and Rated Flow Range

Set the flow rate within the rated flow range.

The set flow range is the range of flow rate that is possible in setting.

The rated flow range is the range that satisfies the sensor's specifications (accuracy, linearity etc.).

It is possible to set a value outside off the rated flow range, however, the specification is not be guaranteed.

Note 1) The flow rate measurement range can be modified depending on the setting. Note 2) For digital flow which with unit switching function. (Fixed SI unit [L/min or L] will be set for switch types without the unit switching function.) Note 3) Flow rate display can be switched between the basis condition of 0/C, 101.3 kPa and the standard condition (ANR) of 20°C, 101.3 kPa, and 65% RH. Note 4) Accumulated flow rate is reset when the power supply turns 0°F. Note 5) The system accuracy when combined with PF2ASEL-backet dwine initial contino

Note 8) The monitor unit conforms to the CE marking. Note 9) For details about wiring, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com).

Note 10) Any products with tiny scratches, smears, or display color variation or brightness which does not affect the performance are verified as conforming products.

311 ®

The PF2□200 series 4-channel flow monitor is to be discontinued as of December 2022. The PSE200A series 3-screen display multi-channel digital sensor monitor is available as a substitute; however, the product specifications differ. Please contact your local sales representative for further details.

Note 1) Fixed SI unit [L/min or L] will be set for switch types without the unit switching function. (*-M is suffixed at the end of part number.) Accumulated flow is reset when the power supply turns OFF. Note 2) Flow rate display can be switched between the basic condition of 0°C, 101.3 kPa and the standard condition (ANR) of 20°C, 101.3 kPa, and 65% RH. Note 3) If Voc side on sensor input connector part is short-circuited with the 0V side, the flow monitor inside will be damaged. Note 4) Switch output and accumulated public output can be selected during initial setting.

Note 5) The system accuracy when combined with an applicable flow sensor. Note 5) The system accuracy when combined with an applicable flow sensor. Note 7) For details about wiring, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com). Note 3) For dottails about wiring, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com). Note 3) For dottails about wiring, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com). Note 3) Any roducts with timy scratches, smears, or display color variation or brightness which does not affect the performance are verified as conforming products.

1 Wide Range Specifications

PF2A7 Series Made to Order

One flow switch can measure small flows to large flows by enlarging the lower limit of the flow rate measurement range.

Dynamic range 1:100 (Lower limit of the flow rate measurement: Upper limit of the flow rate measurement)

How to Order

Specifications

Model	Rated flow range	Displayable range	Settable range
PF2A703H	30 to 3000 L/min	20 to 3025 L/min	0 to 3025 L/min
PF2A706H	60 to 6000 L/min	40 to 6050 L/min	0 to 6050 L/min
PF2A712H	120 to 12000 L/min	80 to 12050 L/min	0 to 12050 L/min

Dimensions

The PF2A7 II H series dimensions are the same as the standard models. Refer to page 322.

Functions

Flow rate measurement selection

Instantaneous flow rate and accumulated flow rate can be selected. A flow rate of up to 999999 can be accumulated. The accumulated flow rate is reset when the power supply turns OFF. (With PF2A7□H, it is possible to select a holding function.)

Unit switching

For Air

Display	Instantaneous flow rate	Accumulated flow
U_1	L/min	L
U_2	CFM x 10-2, CFM x 10-1	ft ³ x 10-1

CFM = ft³/min

High Flow Rate Type (For Air)

Display	Instantaneous flow rate	Accumulated flow
U_ 1	L/min	L, m ³ , m ³ x 10 ³
5.0	CFM	ft ³ , ft ³ x 10 ³ , ft ³ x 10 ⁶

For Water/High Temperature Fluid Type (For Water)

Display	Instantaneous flow rate	Accumulated flow	
U_1	L/min	L	
U_2 GPM		gal (US)	
CBM gol (UR)/min			

GPM = gal (US)/min

Note) Fixed SI unit (L/min, or L, m³, m³ x 10³) will be set for the type without the display unit switching function.

Flow rate conversion

Normal condition: 0°C, 101.3 kPa, dry air Standard condition: 20°C, 101.3 kPa, 65%RH (ANR) Switchable between these conditions.

Flow rate measuring unit confirmation

This function allows for the confirmation of the accumulated flow rate when instantaneous flow rate is selected and to confirm the instantaneous flow rate when accumulated flow rate is selected.

Keylock

This function prevents accidental operations such as changing the set value.

Accumulation clearance

This function clears the accumulated value.

Initialization of setting (only for PF2A7 H series)

This function restores the setting to the original state, just as it had been shipped from the factory.

Output types

Real-time switch output, accumulated switch output, or accumulated pulse output can be selected as an output type.

Real-time switch output

Accumulated switch output

Note 2) Output mode is set to inverted output at the factory before shipment.

Accumulated pulse output

Note1) For a digital flow switch with an unit switching function. (Fixed SI unit [L/min, or L, m^3 or $m^3 \times 10^3$) will be set for switch types without an unit switching function.) Refer to the specifications of the display unit for the flow rate value per pulse.

SMC

Functions

Copy function (PF2D200, 201 only)

Information to be copied is:

- 1 Flow rate range
- ② Display mode
- ③ Display unit (Only available when the unit specification is nil.)
- (4) Output method
- (5) Output mode
- 6 Flow rate display unit (available with PF2A20 only)
- ⑦ Flow rate value

Peak hold, Bottom hold display function (PF2□200, 201 only)

The maximum or minimum value can be held in the case where the instantaneous flow rate display mode is selected during the initial setting. The hold value is reset when the power supply turns OFF or the hold is released.

Error correction

LED display	Contents	Action	
Er (Note 1) Err_ (Note 2)	A current of more than 80 mA is flowing to OUT1.	Check the load and the wiring for OUT1.	
Er2 Note 1)	A current of more than 80 mA is flowing to OUT2.	Check the load and the wiring for OUT2.	
Err_3 Note 2) ErY Note 1)	The set data has changed for some reason.	Perform the RESET operation, and reset all the data again.	
Note 1)	The flow rate is over the flow rate measurement range.	Use an adjustment valve, etc. to reduce the flow rate until it is within the flow rate range.	

Note 1) Applicable to monitor integrated type and remote type except the PF2A7□□H series.

Note 2) Applicable to the PF2A7DDH series only.

For PF2A200, 201

LED display	Contents	Action
Er (Over current is flowing to the load of a switch output.	Eliminate the cause of the over current by turning off the power supply, and then turn on it again.
ErO	Internal data error.	
٤r٦	Internal data error.	Please contact SMC for investigation.
EriO	Internal data error.	
ErS	Internal data error.	Turn off the power supply and
Erb	Internal data error.	then turn on it again.
	The flow rate is over the flow rate measurement range.	Use an adjustment valve, etc. to reduce the flow rate until it is within the flow rate range.

Channel select function (PF2 200, 201 only)

Every pushing the \triangle button, channel selection "1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1..." is available. The flow rate measurement of each selected channel is shown in the monitor unit.

Channel scan function (PF2 200, 201 only)		
Changes displaying the channel shown every about	2	
seconds and its detected flow rate.		

325

Option

When only optional parts are required, order with the part numbers listed below.

In addition to the lead wire assembly shown above, those listed below (female contact) can be connected.

However, they cannot be connected with an e-con connector because the diameter of the core wire and its coverage diameter are different. For details, contact each manufacturer. Contact each manufacturer for details including RoHS compliance.

Connector size	Pin no.	Manufacturer	Applicable series
		Correns Corp.	VA-4D
		OMRON Corp.	XS2
M12	4	Azbil Corp.	PA5-4I
		HIROSE ELECTRIC CO., LTD.	HR24
		DDK Ltd.	CM01-8DP4S

In addition to the connectors shown above, those listed below (e-con) can be connected.

e-con connector

Manufacturer	Model
3M Japan Limited	37104-3122-000FL
Tyco Electronics Japan G.K.	2-1473562-4
OMRON Corp.	XN2A-1430

Cable Specifications

No. of cable wire		4	
Conductor	Nominal cross-sectional area	AWG23	
Conductor	Dimension	0.72 mm	
Insulator	Dimension	1.14 mm Brown, White, Blue, Black	
Sheath	Material	Heat-resistant and oil-resistant lead-free PVC	
Sneath	0.D.	4.00 mm	

Panel mounting

Pin no.	Description	Note
ZS-22-E Panel mount adapter A, B		With mounting bracket

ſ	Part no.	Description	Note
	ZS-26-B Panel mount adapter		With waterproof seal, mounting screw
	ZS-26-C Front protective cover + Panel mount adapter		With waterproof seal, mounting screw

Connection Method

Connection with the Digital Flow Switch (PF2 series)

- Possible to measure accumulated pulse output of a Digital Flow Switch by an unit of 100 L (litter) and 10 ft³ (cube foot) using the
 pre-scaling function* of the multi counter (When inputting to the multi counter, Up or Down is selected as input method.)
- Possible to take advantage of all CEU5 functions using preset mode and function mode.
- * The set value is calculated by selecting manual mode. By multiplication by 4, then, per pulse value is set.

<Connection with other manufacturers' encoders>

- · Possible to switch multi counter side input method to 2-phase or Up/Down.
- Possible to connect to an encoder if the output method is Open Collector.
- When selecting UP or DOWN, phase A to COM input is counted toward addition direction, phase B to COM input is counted toward subtraction direction.

≜Caution

When connecting the CEU5 with an encoder from another manufacturer, please thoroughly confirm the specification beforehand. Please note that the CEU5 may not count normally depending on the output method, output frequency and connecting cable length, etc. of the encoders.
