Air Slide Table

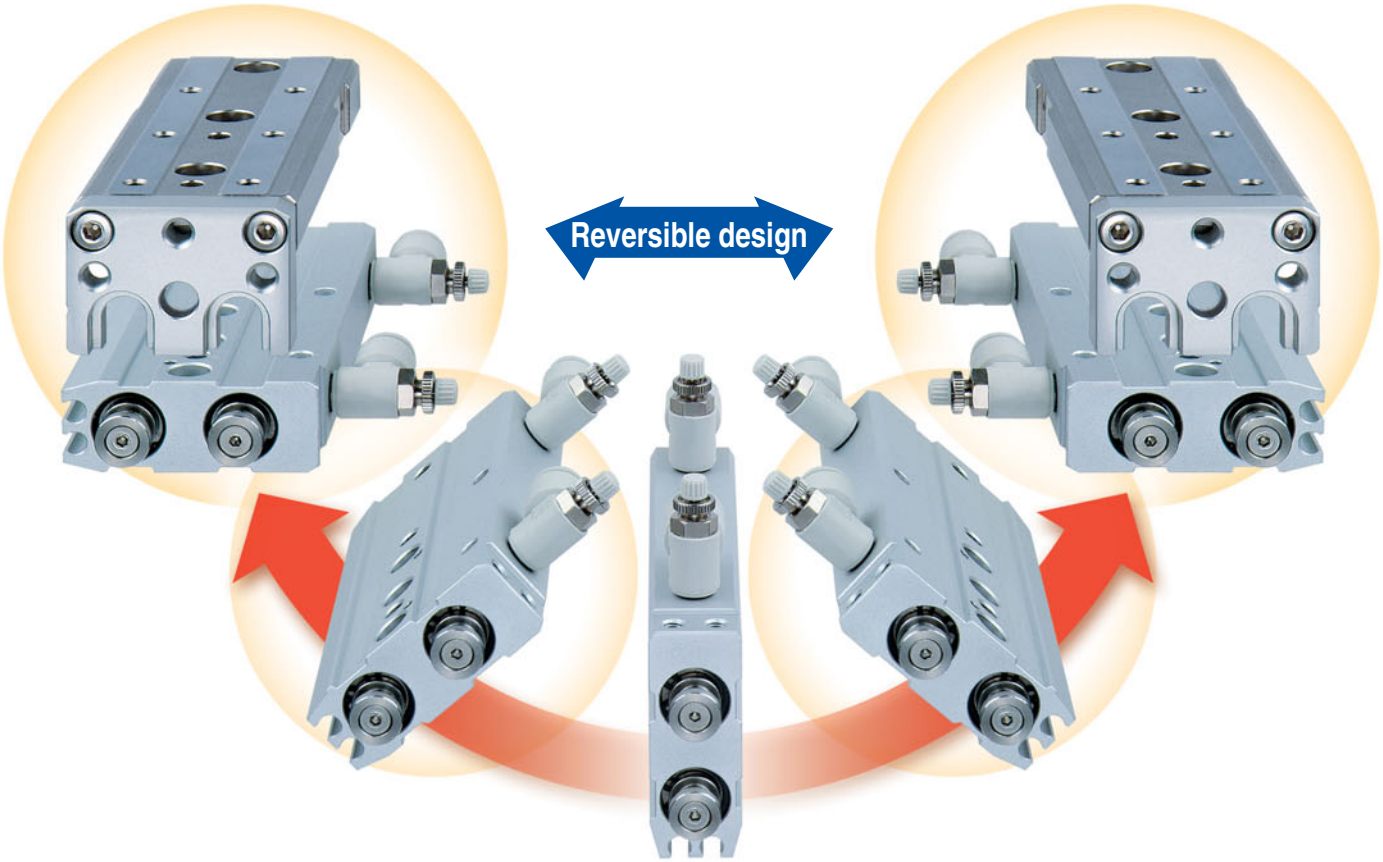
Reversible Type

ø6, ø8, ø12, ø16, ø20, ø25

New

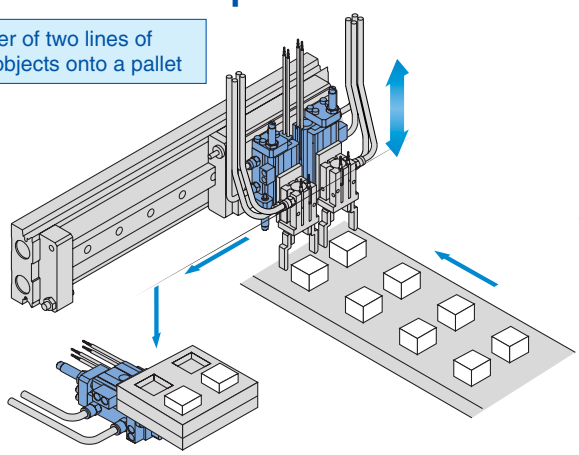
Compliant to RoHS directive

Piping and adjuster positions can be changed on site to suit the installation conditions.

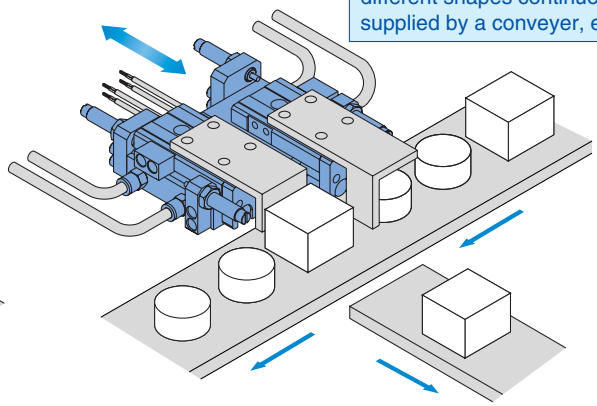


Application Examples

Transfer of two lines of small objects onto a pallet



Sorting of work pieces of different shapes continuously supplied by a conveyer, etc.



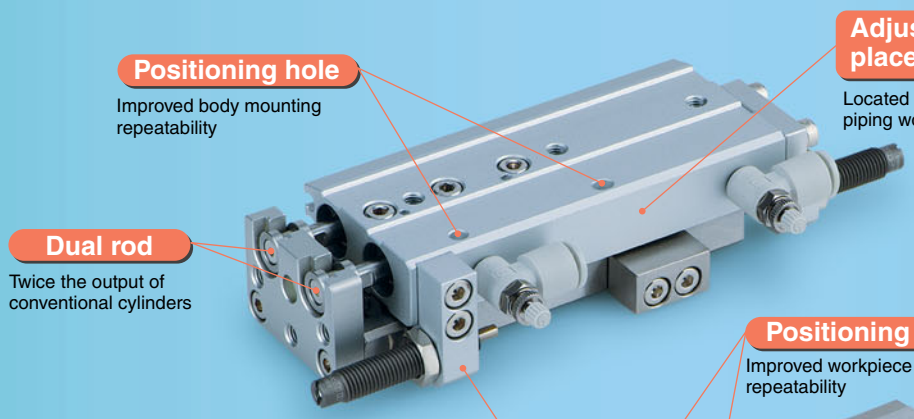
Series MXQR

SMC

CAT.ES20-203A

Integration of the guide rail and the table

Uses a recirculating linear guide for high rigidity and high precision.



Positioning hole
Improved body mounting repeatability

Adjuster and piping placed on the same plane
Located on the same plane to facilitate piping work.

Dual rod
Twice the output of conventional cylinders

Positioning hole
Improved workpiece mounting repeatability

Body mounting through-hole

Wide variety of adjuster options

Workpiece mounting tap

Improved strength
End plate uses extra super duralumin.

It is possible to mount two auto switches on the same plane.
The auto switch can be mounted into the groove made on the side of the body with no projection.

Integration of table and guide rail
Made of martensitic stainless steel

Recirculating linear guide
Wide type linear guide block body made of martensitic stainless steel

High Precision

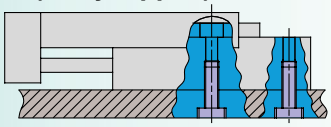
Model	Accuracy (mm)	
	Parallelism	Height tolerance
MXQR12-30	0.035	±0.08

Air Slide Table/Interchangeable with the air slide table MXQ series.

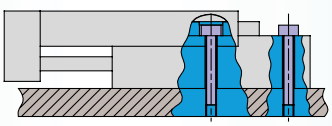
The body and workpiece mounting dimensions are interchangeable with those of the MXQ series.

Three types of mounting. Wider choice of mounting variations facilitates installation.

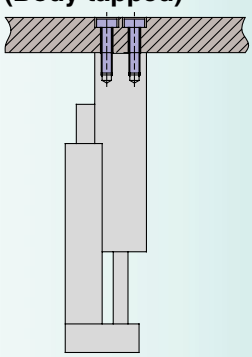
1 Lateral mounting (Body tapped)



2 Lateral mounting (Through hole)



3 Vertical mounting (Body tapped)



Shock absorber
(soft type/short stroke RJ)
can be mounted. (ø8 to ø25)

Improved cycle time, suitable for short strokes.

Shock absorber (RB) can be mounted on ø6.

Wide Variety of Adjuster (Option)

Rubber stopper on both ends

Extension stroke end shock absorber + Retraction stroke end rubber stopper

Shock absorber on both ends

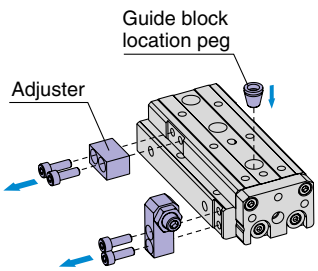
Extension stroke end metal stopper + Retraction stroke end shock absorber

Metal stopper on both ends

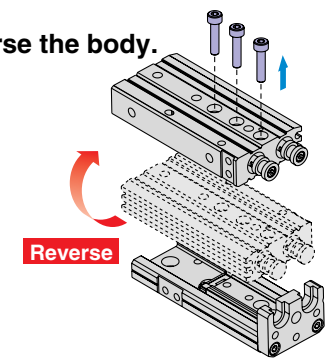
Extension stroke end rubber stopper + Retraction stroke end metal stopper

How to change the adjuster

❶ Remove the adjuster.



❷ Reverse the body.



❸ Refit → Completed

1 Operating Conditions Enumerate the operating conditions considering the mounting position and workpiece configuration.	• Model to be used • Type of cushion • Workpiece mounting position • Mounting orientation • Average speed Va (mm/s) • Load weight W (kg): Fig. (1) • Overhang Ln (mm): Fig. (2)	 Cylinder: MXQR16-50 Cushion: Rubber stopper Workpiece table mounting Mounting: Horizontal wall mounting Average speed: Va = 300 [mm/s] Load weight: W = 1 [kg] L_1 = 10 mm L_2 = 30 mm L_3 = 30 mm
2 Kinetic Energy Find the kinetic energy E (J) of the load. Find the allowable kinetic energy Ea (J). Confirm that the kinetic energy of the load does not exceed the allowable kinetic energy.	$E = \frac{1}{2} \cdot W \left(\frac{V}{1000}\right)^2$ Collision speed $V = \frac{1.4}{*} \cdot Va$ *) Correction factor (Reference values) $Ea = K \cdot E\,max$ Workpiece mounting coefficient K: Fig. (3) Max. allowable kinetic energy Emax: Table (1) Kinetic energy (E) ≤ Allowable kinetic energy (Ea)	$E = \frac{1}{2} \cdot 1 \left(\frac{420}{1000}\right)^2 = 0.088$ V = 1.4 x 300 = 420 Ea = 1 x 0.11 = 0.11 Can be used based on E = 0.088 ≤ Ea = 0.11
3 Load Factor		
3-1 Load Factor of Load Weight Find the allowable load weight Wa (kg). Note) No need to consider this load factor in the case of using perpendicularly in a vertical position. (Define $\alpha_1 = 0$.) Find the load factor of the load weight α_1.	$Wa = K \cdot \beta \cdot Wmax$ Workpiece mounting coefficient K: Fig. (3) Allowable load weight coefficient β: Graph (1) Max. allowable load weight Wmax: Table (2) $\alpha_1 = W/Wa$	Wa = 1 x 1 x 4 = 4 K = 1 β = 1 Wmax = 4 α_1 = 1/4 = 0.25
3-2 Load Factor of the Static Moment Find the static moment M (N·m). Find the allowable static moment Ma (N·m). Find the load factor α_2 of the static moment.	$M = W \times 9.8\,(Ln + An)/1000$ Correction value of moment center position distance An: Table (3) $Ma = K \cdot \gamma \cdot Mmax$ Workpiece mounting coefficient K: Fig. (3) Allowable moment coefficient γ: Graph (2) Maximum allowable moment Mmax: Table (4) $\alpha_2 = M/Ma$	Yawing Examine My. Test conditions
Workpiece weight: Approx. 70% of maximum load weight
Speed : Average speed with the fitting directly mounted (Approx. 300 to 500 mm/s depending on the bore size and operating pressure)

Note) The buffer time depends on the operating conditions (maximum load weight, moment, piston speed and operating pressure and temperature).

Selection

⚠ Caution

1. Operate loads within the range of the operating limits.
Select the model considering maximum load weight and allowable moment. Refer to front matters 1 and 2 for the details. When actuator is used outside of operating limits, eccentric loads on guide will be in excess of this causing vibration on guide, inaccuracy, and shortened life.

2. If intermediate stops by external stopper is done, avoid ejection.
If lurching occurs damage can result. When making a stop with an external stopper to be followed by continued forward movement, first supply pressure to momentarily reverse the table, then retract the intermediate stopper, and finally apply pressure to the opposite port to operate the table again.

Operating Environment

⚠ Caution

1. Do not use in the environment, where the product could be exposed to the liquid such as cutting oil, etc.
Using in the environment where the product could be exposed to cutting oil, coolant or oil, etc. could result in looseness, increased operating resistance, or air leakage, etc.

2. Do not use in the environment, where the product could be exposed directly to the foreign matters such as powder dust, blown dust, cutting chip, spatter, etc.
This could result in looseness and increased operating resistance, and air leakage, etc.
Please consult with SMC regarding use in this kind of environment.

3. Use caution for the anti-corrosiveness of linear guide section.
Martensitic stainless steel is used for the table and guide block. But, use caution that anti-corrosiveness is inferior to the austenitic stainless steel. Especially, rust may be generated in an environment where waterdrops are likely to adhere due to condensation, etc.

Moisture Control Tube Series IDK

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.
Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to Series IDK in the WEB catalog.

Adjusters

Three different types of adjusting bolt have been standardized for extension stroke end, retraction stroke end and both ends adjuster and cushion mechanisms.

■**Rubber stopper**
Standard stroke adjuster

■**Shock absorber**
Absorbs the impact at the stroke end for smooth stopping.
Improved stopping accuracy.

■**Metal stopper**
Improved stopping accuracy.
Without cushioning function for use with light loads and low speeds.

Stroke Adjustment Range

Type	Description	Stroke adjustment range
Rubber stopper	Extension stroke end (AS)	0 to 5 mm
	Retraction stroke end (AT)	
	Both ends (A)	
Shock absorber	Extension stroke end (BS, JS)	Refer to “Dimensions”.
	Retraction stroke end (BT, JT)	
	Both ends (B, J)	
Metal stopper	Extension stroke end (CS)	0 to 5 mm
	Retraction stroke end (CT)	
	Both ends (C)	

∗ Adjusters with wide adjustable range are available as option with rubber stopper and metal stopper. For detailed specifications, refer to “How to Order Stroke Adjuster (Accessories)” below.

Note) The shock absorber service life is different from that of the MXQR cylinder depending on the operating conditions. Refer to the RB/RJ series Specific Product Precautions for the replacement period.

Service Life and Replacement Period of Shock Absorber

⚠Caution

1. Allowable operating cycle under the specifications set in this catalog is shown below.

1.2 million cycles RB0604-X2062, RB08□□
2 million cycles RB10□□ to RB14□□
3 million cycles RJ0805 to RJ1410

Note) Specified service life (suitable replacement period) is the value at room temperature (20 to 25°C). The period may vary depending on the temperature and other conditions. In some cases the absorber may need to be replaced before the allowable operating cycle above.

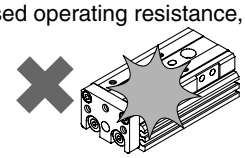
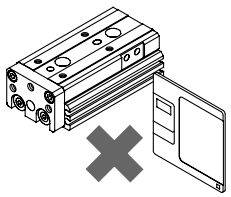
Mounting

⚠Caution

1. **Do not scratch or dent the mounting side of the body, table or end plate.**
   This can cause loss of parallelism in the mounting surfaces, vibration in the guide unit and increased operating resistance, etc.
2. **Do not scratch or dent on the forward side of the rail or guide.**
   This could result in looseness and increased operating resistance, etc.



3. **Do not apply excessive power and load when a workpiece is mounted.**
   If the external force more than the allowable moment were applied, looseness of the guide unit or increased operating resistance could take place.
4. **Flatness of mounting surface should be 0.02 mm or less.**
   Poor parallelism of the workpiece mounted on the body, base and other parts can cause vibration in the guide unit and increased operating resistance, etc.
5. **Keep away from objects which are influenced by magnets.**
   As the body magnets are built-in, do not allow close contact with magnetic disks, magnetic cards or magnetic tapes. Data may be erased.



6. **Do not touch a magnet to the table section.**
   Since the table is made from the magnetic substance, it could turn to be magnetized if it stuck by a magnet, etc. That could cause auto switches, etc. to malfunction.
7. **When mounting the body, use screws with appropriate length and do not exceed the maximum tightening torque.**
   Tightening with a torque above the limit could malfunction. Whereas, tightening insufficiently could result in misalignment or come to a drop.

1. Lateral Mounting (Body tapped)

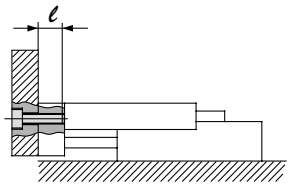
1. Front Mounting



⚠Caution

To prevent the workpiece fixing bolts from touching the end plate, use bolts that are 0.5 mm or shorter than the maximum screw-in depth.
If long bolts are used, they can touch the end plate and cause malfunction, etc.

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth (ℓ mm)
MXQR 6	M3 x 0.5	0.9	5

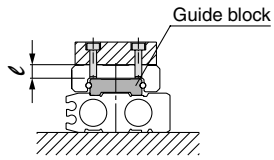
2. Top Mounting



⚠Caution

To prevent the workpiece holding bolts from touching the guide block, use bolts that are 0.5 mm or shorter than the maximum screw-in depth.
If long bolts are used, they can touch the guide block and cause malfunction, etc.

Model	Bolt	Maximum tightening torque (N·m)	Maximum screw-in depth (ℓ mm)
MXQR 6	M3 x 0.5	1.2	4

8. **The positioning hole on the table and the positioning hole at the bottom of the body do not have the same center. Use these holes during reinstallation after the table has been removed for the maintenance of an identical product.**

Handling of Adjuster when Mounted on the Left

⚠Caution

1. **Keep at least 3 mm between adjusters mounted on the right and left when they are side by side.**
   Otherwise, this could cause auto switches to malfunction.

Mounting of adjuster on the left side

∗ Other dimensions are the same as those for mounting the adjuster on the right side.

Note 1) If long bolts are used, they can touch the guide block and cause malfunction, etc. Refer to Specific Product Precautions.
Note 2) Since the table is made of a magnetic substance, it could become magnetized if touched by a magnet, etc. This could cause auto switch malfunction.
Note 3) Check the procedures and tightening torque when changing the mounting position of the adjuster on site. Otherwise, operation failure, accuracy failure, play and damage can result. For details, refer to the **MXQR Operation Manual**.

Caution for Adjuster Options

⚠ Caution

1. **Do not replace with the bolt other than the original adjustment bolt.**
   This could result in looseness and damage due to impact forces, etc.
2. **Follow the table on the right for tightening torque of lock nuts.**
   Insufficient torque will cause a decrease in the positioning accuracy.

MXQR 6	3.0
MXQR 8	5.0
MXQR12	12.5
MXQR16	25.0
MXQR20	43.0
MXQR25	69.0

3. **When stroke adjuster is adjusted, do not hit the table with the wrench.**
   This could result in looseness.

   Refer to the **MXQR Operation Manual** for details.

Auto Switch Mounting

⚠ Caution

Auto switch mounting tool

- When tightening the set screw (included with auto switch), use a watchmaker's screwdriver with a handle about 5 to 6 mm in diameter.

∗ Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed (assuming approximately ±30% dispersion). It may vary substantially depending on the ambient environment.

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.

∗ Normally closed (NC = b contact) solid state auto switches (D-F9G/F9H) and solid state auto switch (D-F8) are also available. Refer to Best Pneumatics No. 3 for details.

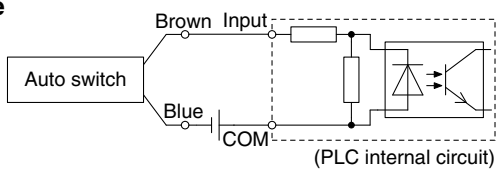
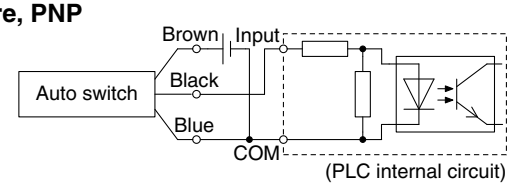
2-wire

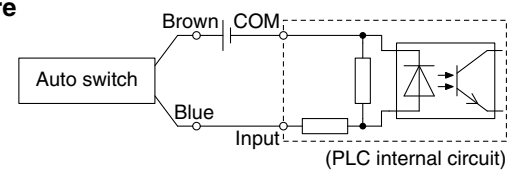


Source Input Specifications

3-wire, PNP



2-wire



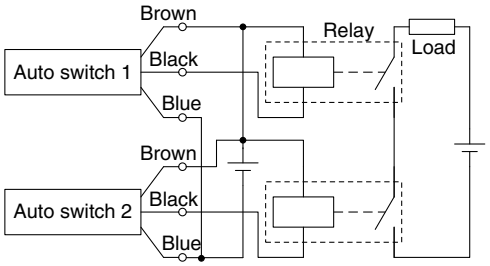
Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

Example of AND (Series) and OR (Parallel) Connection

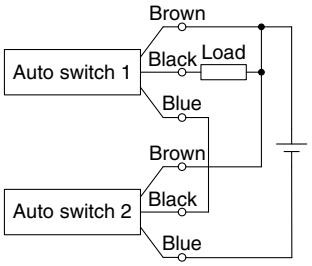
∗ When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.

3-wire AND connection for NPN output

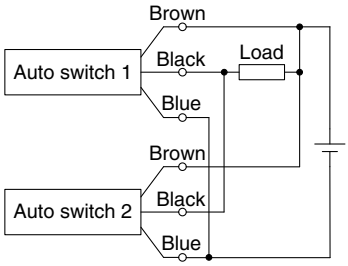
(Using relays)



(Performed with auto switches only)

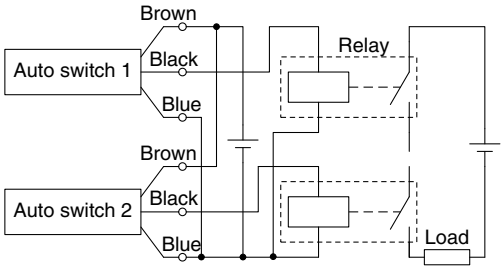


3-wire OR connection for NPN output

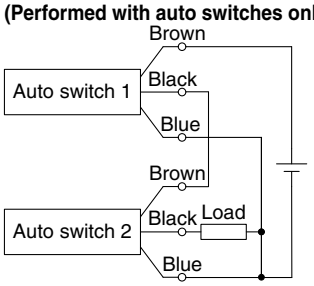


3-wire AND connection for PNP output

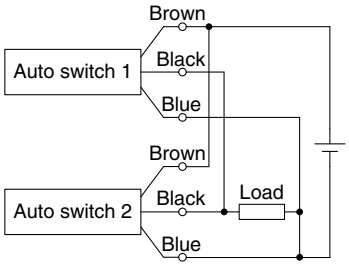
(Using relays)



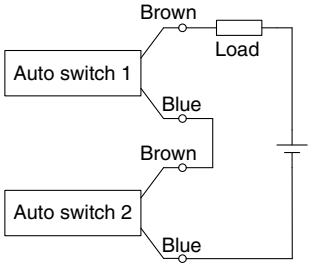
(Performed with auto switches only)



3-wire OR connection for PNP output



2-wire AND connection

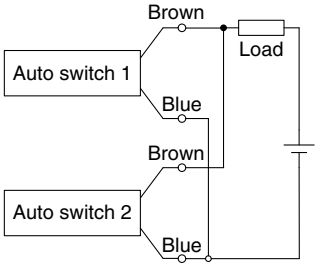


When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with load voltage less than 20 V cannot be used.

Load voltage at ON = Power supply voltage – Residual voltage x 2 pcs.
= 24 V – 4 V x 2 pcs.
= 16 V

Example: Power supply is 24 VDC
Internal voltage drop in auto switch is 4 V.

2-wire OR connection



(Solid state)
When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance
= 1 mA x 2 pcs. x 3 kΩ
= 6 V

Example: Load impedance is 3 kΩ.
Leakage current from auto switch is 1 mA.

1 PTFE Grease — Symbol: -X7

MXQR [Standard model no.] — **X7**
X7: PTFE grease

PTFE grease is used for all parts that grease is applied.

Specifications

Type	PTFE grease
Bore size (mm)	6, 8, 12, 16, 20, 25

∗ Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

⚠ Warning
Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

2 Grease for Food Processing Equipment — Symbol: -X9

MXQR [Standard model no.] — **X9**
X9: Grease for food processing equipment

Grease for food processing equipment is used for all parts that grease is applied.

Specifications

Type	Grease for food processing machines (NSF-H1 certified)/ Aluminum complex soap base grease
Bore size (mm)	6, 8, 12, 16, 20, 25

∗ Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

⚠ Caution
Do not use this cylinder in a food-related environment.

<Cannot be mounted>
Food zone·····Food may directly contact with this cylinder, and is treated as food products.
Splash zone·····Food may directly contact with this cylinder, but is not treated as food products.
<Can be mounted>
Non-food zone·····This cylinder do not directly contact food.

8 Without Built-in Auto Switch Magnet — Symbol -X33

MXQR [Standard model no.] — **X33**

Without built-in auto switch magnet ●

This product does not have a magnet for an auto switch.
It is suitable for applications where magnetic force is not acceptable.

Specifications

Type	Without built-in auto switch magnet
Bore size (mm)	6, 8, 12, 16, 20, 25
Auto switch	Not mountable

∗ Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

9 Fluororubber Seal — Symbol -X39

MXQR [Standard model no.] — **X39**

● **Fluororubber seal**

Change the materials for the piston seal, rod seal, O-rings and scrapers (rubber lined parts) to fluororubber.

Specifications

Type	Fluororubber seal
Bore size (mm)	6, 8, 12, 16, 20, 25
Seal material	Fluororubber

∗ Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

10 Anti-corrosive Guide Unit — Symbol -X42

MXQR [Standard model no.] — **X42**

● **Anti-corrosive guide unit**

Martensitic stainless steel is used for table and guide block. Use this treatment if more effective anti-corrosiveness is necessary.
Table and guide block are given anti-corrosive treatment.

Specifications

Type	Anti-corrosive guide unit
Bore size (mm)	6, 8, 12, 16, 20, 25
Surface treatment	Special anti-corrosive treatment ∗2

∗1 Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.
∗2 Special anti-corrosive treatment makes the table and the guide block black.

11 EPDM Seal — Symbol -X45

MXQR [Standard model no.] — **X45**

● **EPDM seal**

Change the materials for the piston seal, rod seal, O-rings and scrapers (rubber lined parts) to EPDM.

Specifications

Type	EPDM seal
Bore size (mm)	6, 8, 12, 16, 20, 25
Seal material	EPDM
Grease	PTFE grease

∗ Specifications and dimensions other than the above are the same as those for mounting the adjuster on the right side.

⚠ Warning

Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

⚠ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

⚠ Caution

1. The product is provided for use in manufacturing industries.
The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Vacuum pads are excluded from this 1 year warranty.**
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
