Features

- Easy to use
- Compact design
- Ampere reading during operation of unit by removing a shorting link
- Voltage reading between contacts 1 and 2, also during operation of unit
- One shunt jumper supplied with each tester

Ordering details and Description

Order by Part No. R900 021 194

The new MESAP 43650 test adapter, is installed between the ISO 4400/DIN 43650 A male and female connectors used on the valve.

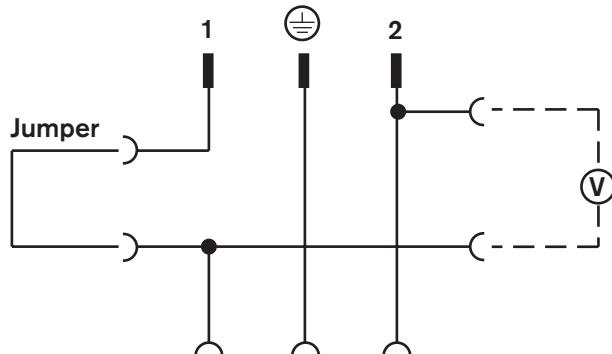

The adapter allows for uninterrupted voltage and/or current measurement in the field while the valve is in operation. Once installed, the MESAP test fixture enables the technician to facilitate servicing or trouble-shooting tests and/or measurements without stopping production.

4 mm banana jack test leads must be ordered separately.

Connection information

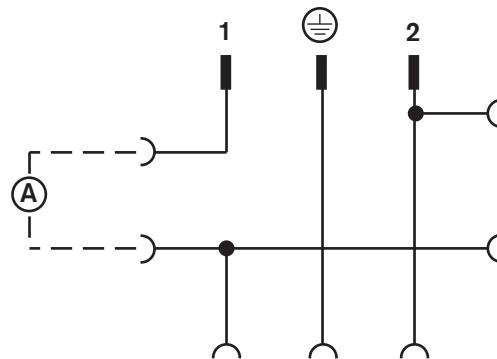

Measuring Voltage

Insert 4 mm banana jack test leads into the black sockets of the MESAP with the designation "V" on the housing. (Attached the other end of the test lead to meter for measurement.) Note that the shunt jumper must be inserted into the red sockets of the MESAP with the designation "A" on the housing.

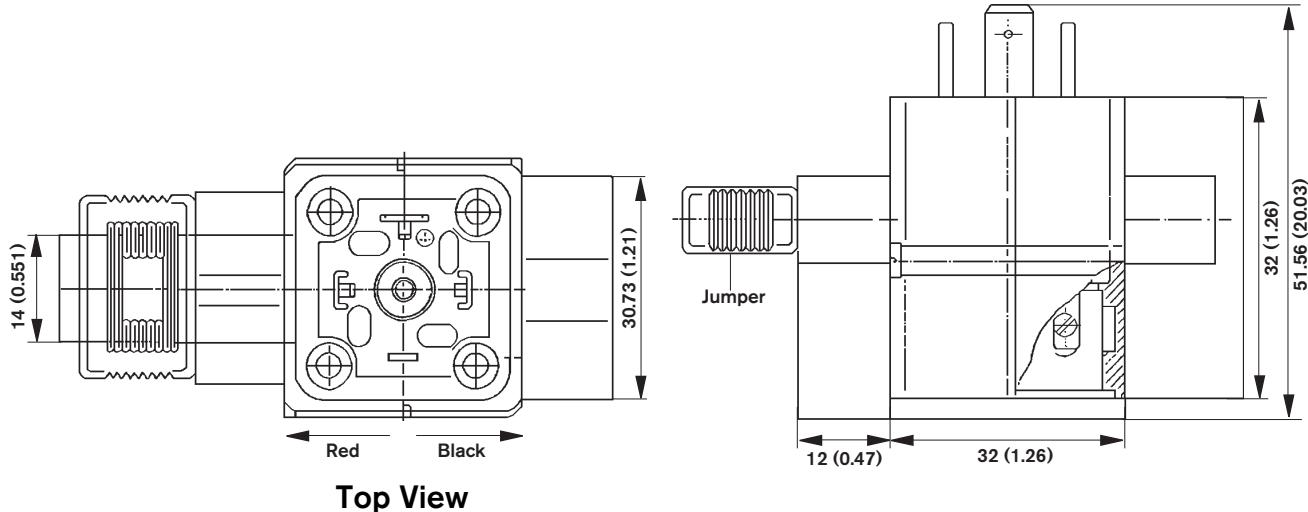

Measuring Current

Insert 4 mm banana jack test leads into red sockets of the MESAP with the designation "A" on the housing. (Attach the other end of the test lead to meter for measurement). Note that the shunt jumper is not used when measuring current (series).
